I make my show windows work for me, and they are producing splendid results. The displays are changed every week, and I very frequently hold demonstrations.

I have endeavored to give you a brief outline of the methods I am employing to increase sales during what is said to

Interior view of hardware store of Edgar Carriere at Hull, Que.

Warehouse used for heavy material, by Edgar Carriere, Hull, Que.

be a dull year. In a comparatively short space of time I have been obliged to increase my staff from two to eight clerks, all of whom are busy every minute of the day.

Until recently I had not realized the value of these various publicity methods, but I can honestly recommend them to hardware merchants as being valuable aids in building up a really successful and profitable business.

Another point on which I have not touched is "quick and efficient service" both in the store and in the delivery of goods. If you promise to deliver goods at a certain time, you should do so. A customer once inconvenienced through delay or neglect on the part of the merchant or his clerks will to a great extent lose confidence in a store. I believe that many customers may be lost when neglect is shown in connection with the delivery system.

A good warehouse is a valuable aid in giving prompt service. I am fortunate in having a commodious and well located warehouse, as shown in the accompanying illustration.

Delivery wagons may be backed right up to the doors. The goods are always kept in good order. I believe that a warehouse should be equally as neat in appearance as the store interior.

A neat delivery outfit is also an important essential. Courteous salesmen and delivery men are also a splendid asset for a merchant. Courtesy costs very little and pays big dividends.

NO BUSINESS WILL RUN ITSELF.

"The small things count," said a hardware dealer to his clerks one day. "When a business stops growing it soon goes backward. It is governed by the same principles that govern a plant. A plant, improperly cared for, soon will wither and go to seed. A business that is permitted to take care of itself soon follows the course of the neglected plant.

"Big men who do millions of dollars' worth of business every year always are looking after the small things. They are scheming and figuring out how the million dollar business of to-day may be broadened to a million and one dollars to-morrow. They are not content with letting the business run itself because from experience they know it won't do it. They have to keep their fingers on the details that bring in the pennies and the quarters. They know that once the small coins begin coming in the millions will accumulate.

"We won't let this business of ours go to seed. We will care for it as we would for the plants that decorate our porches at home and our back gardens. Keep the weeds pulled and the business garden free of anything that tends to deaden it.

"A great many people often argue that there is a lot of luck in business. Maybe there is, but it doesn't come to the man who sits in his private office and waits for it to visit his store. If there really is luck in getting trade, it has to be dug out and captured and held fast.

"Holding trade and increasing it, when all's said and done, is not luck. It's enterprise. The man who has ideas is not the lucky man at all times. His ideas are worth nothing if he doesn't put them into action. That he enjoys a prosperous trade is not luck. It merely shows he let the notion of luck strictly alone. The man who develops trade is the man who always is willing to put his own money on his own O.K. Nerve, not luck, makes a business prosperous." —American Artisan.

CATALOGUES AND BOOKLETS.

Maydole Hammers.

The David Maydole Hammer Co., Norwich, N.Y., has issued a 64-page 1914 catalogue printed in English, German, French, and Spanish, illustrating and describing a large variety of Maydole hammers, including adze eye nail hammers, joiners' nail hammers, brad hammers, farriers' driving hammers, horseshoers' and blacksmiths' hand hammers, drill sharpening, engineers', auto ball peen, machinists' ball peen, boiler riveting, chipping, double face riveting, cornice hammers and many others. Copies of the new catalogue will be mailed on request.

Hardware Firms Want Catalogues.

Two new hardware firms have written Hardware and Metal to the effect that they are now ready for business, and wish to secure catalogues from hardware jobbers and manufacturers. The new firms are, Fenn Hardware Co., Dickson street, Galt, Ont.; Trelford Hardware Co., 1036 St. Clair Avenue, Toronto.

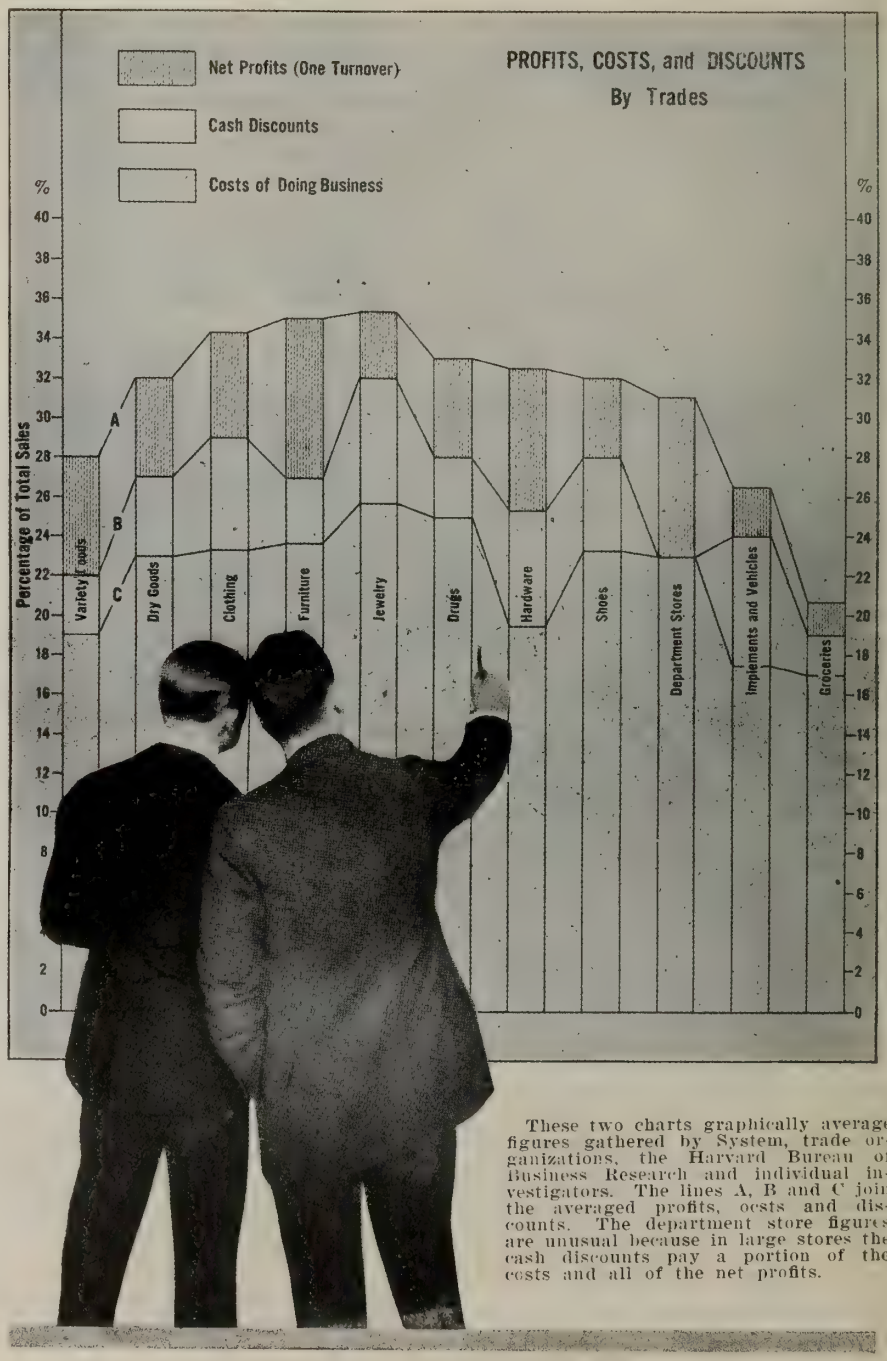
STANDING UP FOR YOUR PROFIT*

Profit is Not Interest on Investment, it is Not a Salary Paid for Managing the Business — Both These Are Items Which the Proprietor Should Properly Pay Himself as Investor in and Manager of His Own Business.

By Wheeler Sammons.

"PROFITS large enough to cover the time, the rent, and the other charges I have spent keeping those goods make them too expensive for my trade." The owner of a small New Hampshire store was explaining the shelf-worn appearance of some stock to an alert man whose chauffeur wanted gasoline. The two men, both nearly sixty, started in business with stores of about the same size. After forty years, one worries over stickers in a town of three thousand; the other controls a string of big New York department stores and takes long vacations during the summer.



"Here's my card," the tourist laughed as his driver signaled. "Maybe you'll recognize my name. I also keep shop—that's why I asked so many questions. I sympathize with you. Perhaps you'll take a bit of advice from me. Get rid of that old stock at any cost. I fire out everything that stops moving. Hereafter, take losses as soon as stock drags.

"To-day success depends on rapid trading. Remember that you must make six sales in order to carry stock and secure a single profit. Shelf profits are not worth a red cent when it comes to counting net gains.

"I started with a store the size of this. The biggest lesson I ever learned is to consider January the important month and see that it doesn't show an inventory soggy with shelf profits. If these ideas help, you're welcome to them, for that remarkable explanation of why some of your stock is musty will hereafter serve as a horrible example to my department managers."

Here were two ideas of profit—one of a storekeeper who really didn't know what the word meant; the other of a merchant who stood up for a sound profit. The New England retailer who adds running expenses to the cost of stickers, until they approximate the value of their weight in radium, partly typifies many distributers. All in this class hesitate about marking down stock until too late; a few agree absolutely with him and maintain that consumers owe them a profit on whatever they place on their shelves. The New Yorker's success came because he knew that a distributer is only entitled to a profit in return for the risk he shoulders and the talent he puts into his business. He undertakes, by using his capacity, to relieve consumers of the risk of not finding what they want when they want it.

If you have money in the bank, it does not require unusual ability to fill a building with goods, or a factory with raw material, irrespective of demand. That is all the man who simply carries dead stock does; consumers are generous when they pay him a fair wage plus bank interest on his money. He may, it is true, control an exceptional location or face weak competition, and, on account of these circumstances, secure a profit even without demonstrating that he has ability. But profit is the public's pay for risk, and sooner or later a skil-

These two charts graphically average figures gathered by System, trade organizations, the Harvard Bureau of Business Research and individual investigators. The lines A, B and C join the averaged profits, costs and discounts. The department store figures are unusual because in large stores the cash discounts pay a portion of the costs and all of the net profits.

*Reprinted from "System," the Magazine of Business.

ful rival will appear. Then what the inefficient man had thought were his profits shift to the man who actually shows capacity for his business.

What is a sound profit, if it only results, as economists tell us, from talent? In business profit comes as a return over and above fair pay for the routine work involved in keeping a shop, office or factory open. It is not rent for a building owned by the business. It is not interest on the investment. It is not money sufficient to pay all the running expenses and the usual mark-down losses. This is what a profit is: the amount consumers gladly pay the business man doing a more or less risky job unusually well.

The manufacturer who secures a profit in a competitive market controls an organization so well that his costs leave him a margin after meeting competitors' selling prices. The head of a successful insurance agency makes money because he handles his staff with more than average ability. A retailer finds a surplus in his bank account when he merchandises stocks instead of going ahead blindly.

The man who shows no capacity either goes under or merely gets a wage—there is no profit if the customers buy at a price which only takes care of costs to do business and fills at market rates a pay envelope for the distributer.

The successful business man justly demands, and gets, something more as compensation for the satisfactory way he handles his risk. He is entitled to a percentage over and above all the items of his running expenses, plus salary, plus bank interest.

How is the business man to fix the amount of this profit and his other charges? His capacity, the nature of his goods or service, the strength of the consumers' demand, and the intensity of competition are the determining factors. Let us consider each in turn—capacity comes first. Business men, like all human beings, vary in ability. Otherwise there would be a standard salary for business men. But some make millions, others thousands. All degrees of business talent exist above the low limit set by those who get no more than bank interest and a wage out of their enterprises. So capacity determines how much a man will make under the conditions set by the three other profit factors. Just as faces differ, it seldom duplicates.

Whether of small or great capacity, however, each man in business encounters the three remaining profit factors, among which the nature of the goods or service is next in order. Stocks are only worth what they will bring—costs to do business may be disregarded except as a check to prevent losses.

Profits in Various Lines and Trades

Each of the figures assembled below gives either net or gross profits for an actual line, store or manufacturing plant.

TYPICAL GROSS PROFITS ON SALES.

Hardware (large store)	33.33%
Hardware line (jobber made 17%)	31.00%
Hardware store (town of 2,000), (cost to do business 25%)	37.05%
Instalment hardware line	62.00%
Large department store (average for seven years)	24.05%
Mail order house (largest in world)	average 25.00%

TYPICAL NET PROFITS (ON SALES) RETAIL.

Hardware store (town of 5,000)	12.05%
Large department store (average for 7 years)	3.01%
Mail order houses (average three years); two of the largest concerns; cost of doing business of the largest 15%	6.08%
Variety goods store	10 to 12%
Variety goods bargain basement	5 to 10%
Grocery	4 to 5%
Furniture stock	18.00%

Take fifty cents worth of straw, a dollar and a half invested in labor, a two-dollar ribbon—add desired style—and a woman may cheerfully pay twenty-five dollars for the finished hat. A man's straw hat often contains raw material costing about a dollar and sells for five dollars. Therefore, the distributer is able to measure his gains against the nature of his goods, provided he has avoided unprofitable lines by keeping his cost of doing business in mind when buying.

Suppose that Carl J. Ricker, who runs a jewelry store in Emporia, Kansas, takes a trip to Chicago and finds "blue bird of happiness" pins popular there. He carries a stock of them back to Emporia; offers a section of Kansas something attractive it might never have been able to secure if he had not shown get-up and go enough to visit Chicago, in order to widen the scope of his buying ability. If his cost of doing business happens to be eighteen per cent., including a fair manager's salary for himself, and ten per cent. his idea of a net profit, is his correct mark-up on the "blue bird of happiness" pins twenty-eight per cent.? Not for a moment. He has a novelty, a bit of jewelry consumers desire. They will gladly pay him a high profit in return for his progressiveness and capacity in locating it. He may justly take a hundred per cent. mark-up, or even more.

"That reads very nicely," you may question, "but how about actual practice?" As a matter of fact, the incident is true of actual practice. Ricker came to Chicago, found the pins, and took them to Emporia—last year. Though his cost of doing business may not be eighteen per cent., his net profit ten, or his mark-up on these pins one hundred, since he is a wise merchant, he doubtless secured a higher gross profit than usual.

To-day distributers who secure attractive profits disregard blanket mark-ups, and take a gross profit on each line according to what it will bring. They find accurately the costs to sell a line, and stand up for a reasonable profit, adding a greater return whenever possible. They are justified, for business men always go a long ways for long profits. Styles or novelties, the carriers of high profit possibilities, usually involve extraordinary risks and abnormal selling expenses.

Round figure mark-ups are relics of the days when jobbers educated retailers to "buy at eighty cents, sell at one-twenty-five; buy at one-twenty, sell at one-fifty; buy at one-sixty, sell at two." To-day progressive retailers know that the nature of the goods, not the out-of-date advice of jobbers seeking to assure them a protecting margin through rule-of-thumb methods, fixes gross profits. Where would the retail grocer be if he marked up staples and fancy lines with the same margin? Or the distributer at wholesale who tried to get as much on sugar as on roasted coffee, teas, spices and dried fruits?

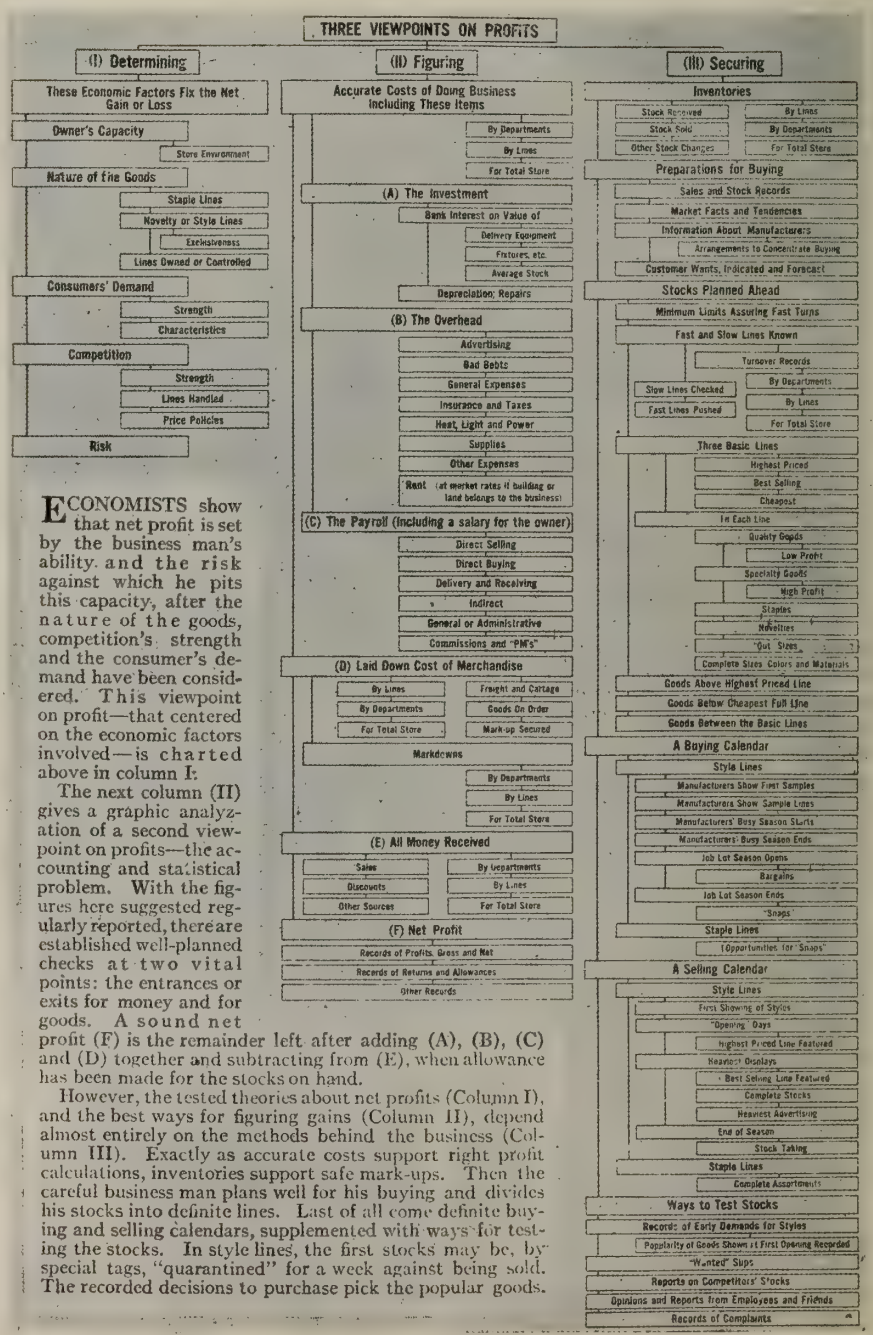
A Michigan retailer died recently after working thirty-eight years behind counters. He left $250. They found he had used a general mark-up—lines that cost $2 a dozen he sold for twenty-two cents each; five-dollar purchases brought him fifty-five cents a piece; and eleven-dollar lots, one dollar and twenty cents an article. The shoe business of the country is in a bad way, at least as far as retailers are concerned, because the distributers fail to secure a suitable return for the style changes which now disturb their stocks. Many use fixed prices, pity the customer when he does

not pity himself, and hesitate to stand up for style prices on style stocks. However, the National Boot and Shoe Manufacturers' Association and the National Shoe Retailers' Association now advise the discontinuance of fixed mark-ups.

Too large a profit is, however, dangerous. The great concerns of to-morrow will undoubtedly build on small profits, rapid stock turns, and large volumes which proportionately lessen expenses. R. H. Macey & Company grew for several reasons, but one of the most important is their reputation for taking only a twenty per cent. mark-up. Nevertheless, round-figure mark-ups usually bring ruin in this day of closely-figured operating costs.

Consumers do not demand round-figure prices; they willingly pay a profit on the service they desire when shown that it costs the distributer money. The customer gauges prices by the satisfaction he secures, not by the distributer's profits. All the consumer asks is plainly marked prices—he has had them for several centuries—the Spectator for November 26, 1712, says of John Morton, a merchant, "He imposes upon himself a rule of affixing the value of each piece he sells, to the piece itself; so that the most ignorant servant or child will be as good a buyer at his shop as the most skilful in the trade." Every merchant is a John Morton today as a matter of course; but not all know costs plus mark-downs by lines, and not all mark-up more than that percentage according to the nature of each line—still John Wanamaker would face ruin in a day if he did not.

The strength of the consumers' demand follows the nature of the goods in our list of profit determining factors. It is not possible to consider any one of these factors without regard to the effect of the others upon it. Demand may not be profitable if competitors supply it easily. As surely as nothing sells without demand, the highest profits occur when a distributer secures the means of satisfying, almost exclusively, a portion of a general demand. Therefore, style changes and novelties often bring attractive returns if they touch a strong demand. These facts explain the attention successful distributers give to locating fast selling lines and surrounding them with attractive equipment or service.



The fourth, and last, profit factor is this intensity of competition. Since very few distributers market monopolies, they find their profits in part determined by the strength of the competition in their territories. They consequently face the difficulty of deciding between a few long profits and many narrow margins. The entire make-up of their enterprises may be affected by the course they select. Moreover, since a decision to proportionately lessen expenses by expanding the sales volume often falls short of its object, many make this factor their Waterloo.

Exactly as important as business capacity, stock characteristics, demand and competition—these four profit factors—are sound accounting and mathematical methods for figuring mark-ups. Because custom has attempted to fit elaborate bookkeeping practices to the exceedingly simple plus and minus accounting problems involved in ninety per cent. of our stores, many distributers go ahead blindly.

Two types of facts—inventory figures and accurate costs of doing business—are necessary. They can be kept on sets of cards without reference to the traditional ledgers, journals, cash books or trial balances. Since simple cost-finding methods have been reserved for another article, only the value of the results secured are here considered.

It is sufficient, therefore, now merely to point out that the earnest distributer keeps at least figures which enable him (1) to add purchases to an inventory taken at the beginning of a period; (2) substract the stock on hand at the end of this period, (3) and substract the remainder; (4) in addition to every cent he has paid out during the period, (5) including a fair wage for himself plus interest on the money invested in his business, from his sales. This remainder is net profit.

Once he finds how easy it is to get in this way some idea of his net profits, the

ECONOMISTS show that net profit is set by the business man's ability and the risk against which he pits this capacity, after the nature of the goods, competition's strength and the consumer's demand have been considered. This viewpoint on profit—that centered on the economic factors involved—is charted above in column I.

The next column (II) gives a graphic analyzation of a second viewpoint on profits—the accounting and statistical problem. With the figures here suggested regularly reported, there are established well-planned checks at two vital points: the entrances or exits for money and for goods. A sound net profit (F) is the remainder left after adding (A), (B), (C) and (D) together and subtracting from (E), when allowance has been made for the stocks on hand.

However, the tested theories about net profits (Column I), and the best ways for figuring gains (Column II), depend almost entirely on the methods behind the business (Column III). Exactly as accurate costs support right profit calculations, inventories support safe mark-ups. Then the careful business man plans well for his buying and divides his stocks into definite lines. Last of all come definite buying and selling calendars, supplemented with ways for testing the stocks. In style lines, the first stocks may be, by special tags, "quarantined" for a week against being sold. The recorded decisions to purchase pick the popular goods.

value of going deeper into his business becomes evident. He then discovers that after all it is not so much of a task to follow the net and gross profits on each line; to pick the slow and fast movers; to apportion the overhead correctly, even by lines; to demonstrate how many lines he can safely carry; to establish the quickest way to move stickers; to show what form of advertising brings him the most money, and to fix his losses from bad debts. In short, he pulls himself, without any trouble whatsoever, away from the greatest danger indicated by failure statistics—incompetence.

Once he has adequate facts and cost figures at hand, still another difficulty confronts the distributer—the actual calculation of selling prices. For several years those anxious to help the retailer have earnestly admonished: "Don't fool yourself by marking up on the cost price."

Although many merchants forget that a percentage of the cost price is smaller than the same percentage of the selling price, it is absolutely incorrect arbitrarily to state that mark-ups from cost figures mislead. It is quite sound to calculate from cost prices if all the percentages used relate to cost figures. As a matter of fact, many progressive concerns maintain both cost and selling price mark-up records. But most merchants, quite naturally, think of expenses as so much of their sales. If expenses expressed as percentages of sales are figured on costs—smaller amounts than the sales, of course—mistakes result. To avoid this blunder, it is only necessary to keep clearly in mind what your percentages actually tie up with—sales or costs. The accompanying table shows the difference between percentages on sales and costs—marking up an article 50 per cent. of its cost price is exactly the same as adding 35 1/3 per cent. of its selling price:—

Selling Price Percentages.	Expressed as Fractions.	Corresponding Cost Price Percentages.
50	1-2 1-1	100
33 1-3	1-3 1-2	50
28 4-7	2-7 2-5	40
25	1-4 1-3	33 1-3
20	1-5 1-4	25
12 1-2	1-8 1-7	14 2-7
10	1-10 1-9	11 1-9

Here is an example to illustrate these facts. Suppose a merchant who finds it costs him 25 per cent. of his sales to do business and wants a net profit equal to 10 per cent. of his sales desires to secure a sound profit on an article which cost him $10. He knows that the selling price represents all, or 100 per cent. of his income, and since the costs and the profit amount to 35 per cent. of this, the cost—in this case $10—can be nothing more or less than 65 per cent. If $10 are 65 per cent. of the selling price of this particular article, then 1 per cent. is 1/65 of $10, or $0.1538. If $0.1538 are one-hundredth, then the entire selling price is 100 x $0.1538, or $15.38.

But now consider that this merchant records his expenses and net profits as percentages of the cost of his stocks. He would find them to be 53⅞ per cent. To get his selling price on the same $10 item he would simply add 53⅞ per cent. to it and get, as before, a selling price of $15.38. But if—this is the nigger in the wood pile they talk so much about—but if he became confused, took the 35 per cent. selling price mark-up as a cost percentage, and added only $3.50, he would get a very unsound, ruinous selling price—$13.50. This is the type of mistake responsible for the agitation about marking up on the selling price—quite evidently, one that is easily avoided.

This confusion of profit-figuring methods, combined with the variable nature of the factors that shape net returns, makes the setting up of hard and fast standards impossible. Recently the Philadelphia grocers cut prices to a certain trade class eight per cent.; St. Louis retailers at once declared that somebody had made a disastrous mistake, since five per cent., in their opinion, measures the average net gain on groceries.

Some believe that a $2.25 shoe retailed for $3.50 gives a good value, still others regularly market a $3 shoe for $5. One investigator reports finding that retail distributive gross profits range from 24 per cent. to 35 per cent.; another fixes upon from 9½ per cent. to 30 per cent., with an average at 23½ per cent.; and a third considers 33 1/3 per cent. a fair average selling price mark-up for all lines, with normal costs between 22 per cent. and 26 per cent., and reasonable net gains over 7 1/3 per cent., but under 11 1/3 per cent.

Nevetheless, typical gross and net profits are valuable, if for no other reason than that they point the fast turning, narrow-margin lines. They fix just when to stand up for a profit. At least they show what the other man is doing—mighty helpful knowledge, now that the days of big, easy-going profits have faded, never to return.

There can be no doubt about this dwindling of profits. In 1899 the average grocer marked up his stocks eighteen or twenty per cent.; to-day twenty-five is more usual. The By-Products Coke Corporation of Chicago finds that rising costs, combined with other conditions, cut its net profits exactly 2.42 per cent. last year.

This article brings together several hundred typical profits. Since the low man usually sets the market's price within his trade radius, it is well worth the time to study these normal figures. But a sufficient array of modifying restrictions has been brought forward to prevent their receiving consideration as absolute standards. System's investigators secured some of these facts, trade organizations worked out others, and a few only recently came before congressional committees handling legislation touching business. All of the percentages refer to selling prices

Business is no stronger than the weakest function—if these averages indicate waste motions in distribution, this weakness will be felt all over the land. Distributers already sense the danger—dwindling bank balances supply exceedingly effective barometers. They first of all turn to costs of doing business—find out exactly where they stand. The next precaution is to prune these costs to the lowest figures possible—for cutting off a bit from the expense total means widening the profit margin. And the profit margin supplies the wherewithal for keeping up with rising costs.

Not until all of this is done can a business man turn to consumers goaded to insistence by the high cost of living and confidently say: "The conditions start beyond my control—I understood that it was up to me to help myself out first, and without assistance from anyone, without being forced to it, I've eliminated every false motion , every waste—over and above these rock-bottom costs of mine you've got to allow me to stand up for a sound profit."

NEW SOLDERING PROCESS.

Hardware and Metal had a visit this week from a Torontonian who has invented a new process for soldering without heat. The inventor claims that the solder can be applied to all pieced tinware without the aid of a soldering-iron, flux or heat. This solder is in semi-liquid form and is said to cost about one-half the price of ordinary solder, at the same time eliminating the necessity of using the tools now used for soldering purposes. The inventor also claims that with the new method of soldering the work can be done in one-quarter the time taken under the process at present in use. The inventor had several samples of work with him to bear out his statements. One sample shown was a small vessel made of aluminumware on which the bottom was soldered by the new process. The inventor has not yet attained for his product the point of perfection he desires, but he feels sure that the results so far obtained are sufficient to demonstrate that the new process when perfected will be used to a large extent by manufacturers.

Talks of a Selfmade Merchant to his Clerks

The Little Things Count — One Small Detail That Spoiled a Window Display—Small Details Count in Everything.

By Byron J. Morrow.

IT'S the little things in life that count, said the Boss. I know you boys are just the same as all other boys of your age. Your're inclined to look at the big things and to think the small details of no account. When I was twenty-one I started to work in a hardware store and I used to dream away hours every day, thinking of the time when I'd own the biggest wholesale hardware business in Canada. Such little matters as keeping my stock clean and well sorted up didn't interest me; they were too trival to be worth any time from the future controller of the wholesale hardware business. I left small details to small minds. One day the owner took me into his inner office and we had a heart-to-heart talk. He was a ruthless surgeon of personal failings, that old boss of mine; and he soon amputated my bump of conceit. I came out willing to join the ranks of the small-minded and to hold my job at the cost of attending to details. I've been looking after the small things ever since.

J. Pierpont Morgan didn't become a multimillionaire by his skill in swinging big deals and amalgamating trusts and so forth. J. P.'s wealth was due to the fact that in the first place he saved his nickels and dimes and dollars so that he piled up enough money to get to the place where big deals were possible. There are hundreds of men, some right here in this town, who've got the necessary brains to swing big deals. The only thing that prevents them is that they haven't built themselves up to the position where they have the connection or the material to get in on the big things.

The dollar bills that a millionaire saved at the outset of his career had more bearing on the building of his fortune than the stroke of genius by which he scooped in the stock of a group of railways.

Any dunderhead can earn money; but it takes a wise man to save it and use it.

Now I'll tell you why I'm talking along this strain. The other day when Bob was sweeping out under one of those front counters he brought out a big bundle of odd pieces of string. This accumulation came from remnants left over after tying up parcels. It had gathered there in a week's time, for Bob tells me he had swept thoroughly before. That bundle of string represented about five cents in money and I guess the business won't suffer from the loss; but I certainly want to enter a strong protest on principle. That five-cent loss is equal to $2.60 in a year. And it could be saved if proper care were exercised.

The other day we had a display of aluminumware in the store window. It was a beautifully arranged display and one could see with half an eye a lot of time had been spent in getting it ready. But there was one detail that stuck out from that window like a sore thumb—one mistake that spoiled the whole arrangement. A large sauncepan in the centre had a noticeable dent in it. "If this new kind of ware gets damaged as easy as all that I'll stick to the old kind," would be the comment of every thrifty housewife who saw that window.

Just a small detail that; and yet it turned a boost for aluminumware into a hard knock.

No matter how small a thing may be, it is always worth consideration. Did I tell you once before that I sold books while working my way through school? Well, we had one set of books that was selling like wildfire, and one of the salesmen thought out a way of improving the covers. He asked the president to have the change made, and the chief on figuring up found that the change would only cost one cent a volume more than the old way. The salesman was delighted when he heard this. "One cent!" he exclaimed. "Why, that's practically nothing."

The chief got out a pencil and started to figure. "One cent a volume, thirty volumes to a set, thirty cents. Forty sets a day, $12. Six days a week, $72. Fifty-two weeks in the year, $3,754."

"Mr. ———," said the chief, handing the memorandum to the salesman, "I don't know of any easier way of saving $3,754 than by leaving the books just as they are."

One cent saved per volume looked like a small matter to the salesman. He was properly staggered when the president demonstrated to him that all the coppers thus saved would amount to nearly $4,000 in the course of a year.

And mind you, the lesson I am trying to drive home is not confined to money matters. Not by any means. Small details count in everything. The window trimmer who studies the small details originates the best displays; the salesman who watches everything, and studies every phase of his work, sells the most goods. Genius is a "capacity for infinite pains." Efficiency is the ability to carry out your work properly to the last detail.

Cloutier Bros. have placed their opening order for hardware to be sold from their general store in Gouveneur, Sask. Gouveneur is a new townsite of the C.P.R., which was sold on May 7th. Cloutier Bros. have until recently been carrying on business in Notre Dame D'Auvergne, Sask.

"He was a ruthless surgeon of personal feelings."

False Advertising Made Criminal Offence

New Bill Passed Third Reading in Commons That Follows Lines of Request Made by Retail Merchants' Association.—No Chance of "Shoddy" Sold as "All Wool" and Escaping Penalty

An Authorized Interview by Hardware and Metal Representative with E. M. Trowern.

THE efforts of the Retail Merchants' Association of Canada have borne fruit and a False Advertising Act is now upon the statute book of Canada. Conviction may be followed by a penalty of $200 and costs, or six months' imprisonment. The first big movement to secure this was made in February of last year, when a large delegation, representative of the retail merchants of Canada, waited upon the Premier and the Minister of Justice to urge the passage of such a measure. Early this session again similar representations were made.

The object of the bill embraces more subjects of misrepresentation, of course, than what ordinarily comes under the head of retail advertising. One of the chief abuses, as the Minister explained, was the advertising of land. Legislation had been enacted because there appeared to have grown up a widespread abuse in connection with the advertisement of properties for sale. He did not intend to restrict a man's expression of his good opinion of his own goods, but to punish him for knowingly making a false statement as to value or price. He had had representations from all over the country, and particularly in the West, of a system of deception in advertising properties for sale. The purpose of the bill was to make the very fact of advertising falsely an offence, whereas the present law as regards obtaining or disposing of goods on false pretences had reference rather to the results of such false pretences.

"The Best in Town."

A question came up that will naturally arise with all retailers: If a man said his shoes were "the best in town," might he be liable? In so advertising, was the Minister's reply, the merchant was giving expression only to his opinion, but "if he proclaimed his goods to be all wool when they were not, he would be misrepresenting facts and should be punished."

This distinction will serve to explain the act in a nutshell. Indeed, action on any other basis would lead to endless "expert" evidence, and probably would make the Act a laughing-stock. As it stands, the basis for prosecution is on a question of fact that can be verified.

Patent Medicines.

Some interesting inquiries were made by members during the discussion in committee that throw sidelights upon the application of the new law. In regard to patent medicines, application of the law would depend on whether or not there was a false statement of fact in the advertisement.

The bill was amended to include false pictorial representations in real estate advertisements.

A danger point was raised by the member for Moose Jaw, Sask., who feared that the law would be employed by persons who made bargains and then rued them to go back upon such bargains by threats of prosecution. It was pointed out, however, by the Minister that this evil existed under the present law and would not be heightened by the new Act.

Newspapers Responsible?

The question of newspaper responsibility was also introduced by Hon. Frank Oliver, the veteran editor and proprietor of the Edmonton Bulletin—"veteran," it should be added, in point of years of editing, not in the actual total span of his life. To this Mr. Doherty replied that if a false advertisement were published with the knowledge of any individuals connected with the newspaper, such individuals would be liable under the Act. The Act was aimed rather at the persons responsible for the advertisement, however.

The new legislation is certain to form the basis for a lengthy discussion at the convention of the Associated Ad. Clubs of America in Toronto next month, when the question of the Truth Emblem will be threshed out. Similar legislation is in force in many of the states across the border, and in most cases the prosecutors are associations of retail merchants.

VERY SATISFACTORY.

THE following statement as to the working out of the new legislation was made by E. M. Trowern, secretary of the Retail Merchants' Association of Canada.

"While it is open to anyone to prosecute under the Act we will make it our special business to see that it is carried out. It is more natural for retail merchants to attend to this, for they are the ones, naturally, who really know when there has been false advertising. If a dry goods merchant finds a man has been misrepresenting facts he would notify the association and we would at once start an investigation. If we found his contention was right we would prosecute. Suppose for example a man is advertising $30 suits for $15, 'guaranteed all wool.' Under the old Act if a man bought a suit that was not 'all wool' for $15, the firm would have the excuse that this was not the suit advertised and would escape conviction. Now every suit sold for $15 would have to be 'all wool.' The prosecution under the new Act is made to cover the real deceptive intent of the transaction, and should prove very satisfactory. Indeed the whole Act is practically what we ourselves urged on the Government."

EXHIBITORS AT CONGRESS.

The first Canadian and International Good Roads Congress was held in Montreal this week and was largely attended. Many interesting addresses were heard from prominent speakers on various phases of the good roads movement. The sessions were hold in the Arena, and in addition to the business and social features there was an exhibition of road-making machinery and materials, etc., that was viewed with considerable interest. Among the exhibitors were: The Canada Cement Co., Montreal; Pedlar People, Ltd., Oshawa; Patterson Mfg. Co., Montreal; Thomas Davidson, Mfg. Co., Montreal; British-American Oil Co., Montreal; Canada Ingot Iron Culvert Co., Guelph; Imperial Oil Co., Montreal; Canadian Fairbanks-Morse, Ltd., Montreal, and Canada Shovel and Tool Co., Hamilton, Ont.

NOTE OF ALARM.

Puck.

Salesman—Here's an alarm clock that's guaranteed positively to make a fellow jump out of bed.

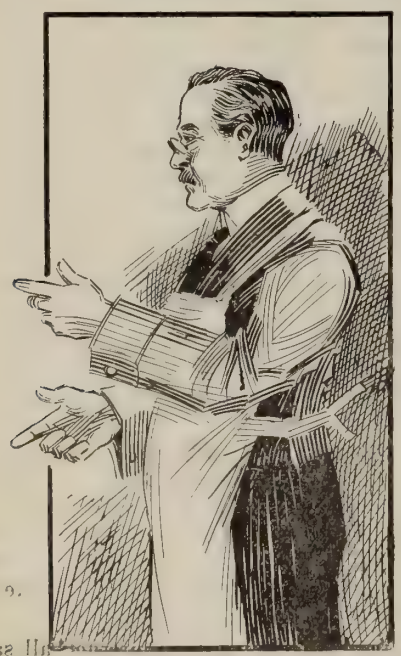
Mr. Tardee—That's what they all say—but let's hear it ring.

Salesman—It doesn't ring—it honks.

Traveling Salesmen of the Past and Present

A Merchant Tells of an Experience With Soap Traveler Whose Persistency Overcame His Good Judgment and Got Him Into Trouble—Nevertheless This Dealer is a Warm Friend of the Knight of the Grip.

Written for Hardware and Metal by "Falcon"



"I'VE been in business for nigh on to thirty years now and in that time I've seen some pretty raw samples of travelers, but to do justice to the travelers in general, I must say that the objectionable ones wouldn't be over one per cent."

As it was early in the day and customers few, Mr. Seymore, a tall, keen looking man, of the quiet type, and proprietor of one of the best general stores in the county, leaned back against the fixtures behind the counter. I scented a probable incident that must have been uppermost in his mind when he made the above remark, and asked him if he didn't consider the present day traveler an improvement over the older generation. He answered:—

"Yes, and No. Yes, because competition is keener than a few years ago, and therefore travelers have to be more on the alert and clear headed when doing business. Years back we didn't see so many travelers and we got to know them better. Our business was bulkier and done with only one-tenth of the accounts that are necessary to-day.

Experience With Soap Traveler.

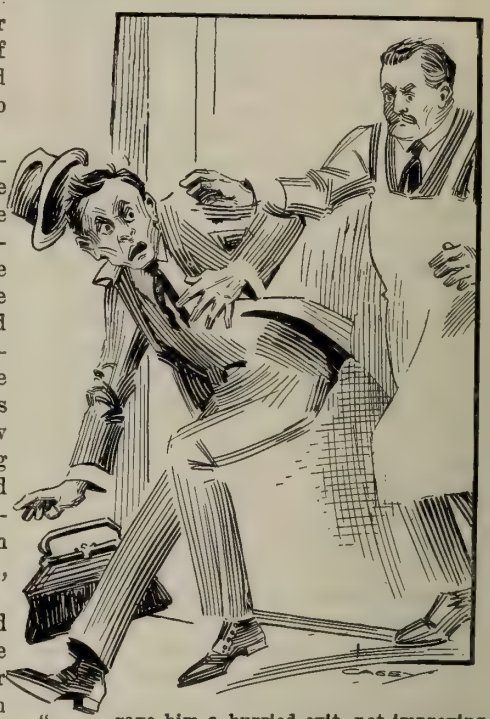
"It is impossible to-day to put all your eggs in one basket, competition is so keen, that we must pick and choose, and although to a certain degree, there is an amount of sentiment goes with our trade, it is far removed from that of the earlier days. When I mentioned raw travellers I had in mind a soap traveler that dropped in not long ago.

"He leaned back against the fixtures behind the counter."

"He struck me as one of those surface men that leave school or college with convictions that the world is before them, for them, and awaiting their bidding. He probably had this knowledge instilled in him by mild-eyed college professors, who read from books and taught from theory, but never went beyond into practice, or he may have come in contact with some of these business magazines, who lay down rules on 'How to approach a merchant when selling goods!' etc. Anyway, whether he did or not he learned a valuable lesson before I got through with him. Only in this case the merchant approached him, and not gently, either.

"As I started to say, this man sold soap, ——— ———, I think the name was. I had about five cases in my cellar at the time and it wasn't selling, which I told him. He insisted on selling me another five cases, which I, of course, refused to consider. I was very busy at the time and politely told him that I would be glad to see him next trip, as I couldn't do business at present.

"I went away then to wait on a lady and was gone some time, but saw that he was still there. It annoyed me that he would have so little tact, and I was more than surprised when he leaned over the counter, as I was making change at the register and said:—



" 'I want to send you those five cases in, as we are going to sample this town and you will need more soap.'

Physical Suasion Resorted to.

"I got hot then and told him to get out of my store and stay out, to which he insolently replied, that he would go when he was good and ready and not before. This was too much for any man, so I just swung the door open and catching a good grip on the neck and seat of his smart clothes gave him a hurried exit, not improving his personal appearance as he lit.'

"If I were a traveler I would endeavor to distinguish the difference between talking too much and too little. There is a happy medium.

"I have a great many warm friends among travelers, and I make it a point

"———gave him a hurried exit, not improving his personal appearance as he lit."

to be courteous to all, for I am aware of the fact that my standing among travelers when they may happen to mention me, is a great asset to my business. Furthermore, I am able to get valuable information from them relative to my business, little hints in prices, display methods, best sellers at other points, as well as advertising ideas. The wise traveler, in my estimation is not the aggressive one so much as the suggestive one. A traveler who can suggest an idea in connection with his goods and convince me that what he says is logical, I'll not only buy his goods, but look for him again, as a live salesman seeing the best and the poorest stores through the country should accumulate ideas and methods that can only be got through personal encounter.

"Well, here it is ten o'clock, I'll have to quit this yarning and get busy. If you'll tell me about what time you will be opened up, Mr. Allcott I'll come over and see your samples. I'm getting rather low in some lines."

"About two o'clock, if that will do, Mr. Seymore, and I'm glad to have had that little talk with you. I shall benefit by it I'm sure, for it is not often that we hear the merchant's side."

Letters to the Editor

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld if desired, but name of writer must accompany correspondence as an evidence of good faith.

Dresden, Ont., May 15, '14.

Editor,
Hardware and Metal,

Dear Sir,—Enclosed please find letter which I would like you to give prominent space in your next issue. Thanking you in advance,

R. A. WELLS.

Following is the letter:—

To My Fellow Hardwaremen,—

While we have a strong organization in the Retail Hardware and Stove Dealers' Association, in which I am well pleased, with what we are doing to benefit each other, still there are many things we are not doing, which I think can be done.

Now my greatest complaint is this, —on several occasions I have been called on to quote a price, or have gone out to sell roofing, both metal and prepared, only to find some carpenter or mechanic has an agency, and is selling the roof at mere cost, simply to get labor, putting it on.

On another occasion recently, I was asked by a contractor for prices on skylights. I wrote the Pedlar People, Metal Shingle & Siding Co., Galt Art Metal Co., Ltd., and Wheeler & Bain, in order to have them all covered, but as I left out the Metallic Roofing Co., I lost the business, as he bought direct from them.

I bought a carload of roofing from the Pedlar People thinking I might make a little money out of it, but I guess I will have to sell it at a loss if I wish to get rid of it.

Now, we hardwaremen can supply all the roofing needed, and make a profit, if we could only have protection.

Although we deal with the Pedlar People, who use us well, I would not uphold them interfering with my fellow hardwaremen in other places. They all have their customers, and there will be just as much roofing sold if matters were arranged to protect us.

I would suggest that if a letter was written to each Manufacturer, Wholesaler or Jobber, and signed on behalf of the Retail Hardware & Stove Dealers' Association, (with their permission) advising them not to sell any outsiders whatever, and every merchant back it up, that we might have some weight in the matter.

If we cannot do this, which is one of the most important duties in my estimation, we could perform, what is the use of the Association?

I would like to see this replied to, either with criticism or comment, letting it apply to any line of goods we should have the exclusive agencies for.

We can handle the business,
We need the business,
May we have it?

R. A. WELLS,
Dresden.

Hardware and Metal is investigating the situation referred to in the above letter and will treat the subject from all angles in an editorial in next week's issue.—Editor.

1596 Queen St. E.,
Toronto, May 15, 1914.

Hardware and Metal,
City.

Dear Sirs,—I am enclosing cheque for Hardware and Metal subscription. I have just completed a very successful year's business. I have found your magazine has been a help both from suggestions and enthusiasm. The market pages cannot be over-estimated as they are exact and complete. I wish you the success your magazine deserves.

Yours truly,
(signed) Frank R. Jackson.

682 Queen St. W., Toronto,
May 15, 1914.

Hardware and Metal,
City.

Dear Sirs,—I find entire satisfaction with paper. Regret the fact that I cannot devote more time to its pages. You certainly deserve credit for the amount of useful information given out each week. One thing I find in regard to profits, almost impossible to get proper percentage owing to competitors who almost give goods away.

Thanking you for benefits received from your paper and wishing you every success, I remain,

Yours truly,
(signed) Jas. Ivory.

ENLARGING OTTAWA STOVE PLANT.

The Beach Foundry Co., Winchester, as recently announced in Hardware and Metal, has taken over the plant and business of the Butterworth Foundry at Ottawa. The firm expects to begin operations shortly. The present offices are being rearranged. A third storey is being added to one building, a second and third storey to another. A new moulding shop is being erected and equipped and much additional equipment is being added to the plant. The firm states that the new line will embody the best in the Beach and Butterworth range of stoves and furnaces, and when the new Ottawa plant is completed it will have triple the former capacity. The manager, C. Sparling, is working out a systematic arrangement of the factory, whereby the various processes may be carried through from moulding shop to assembly, storage and shipping department in proper succession and with an advantageous expenditure of time and effort. C. A. Connor, formerly manager of the Butterworth Foundry, is being retained on the selling end.

MANY INNOVATIONS IN NEW STORE OF PHILBIN CO.

(Continued from page 39.)

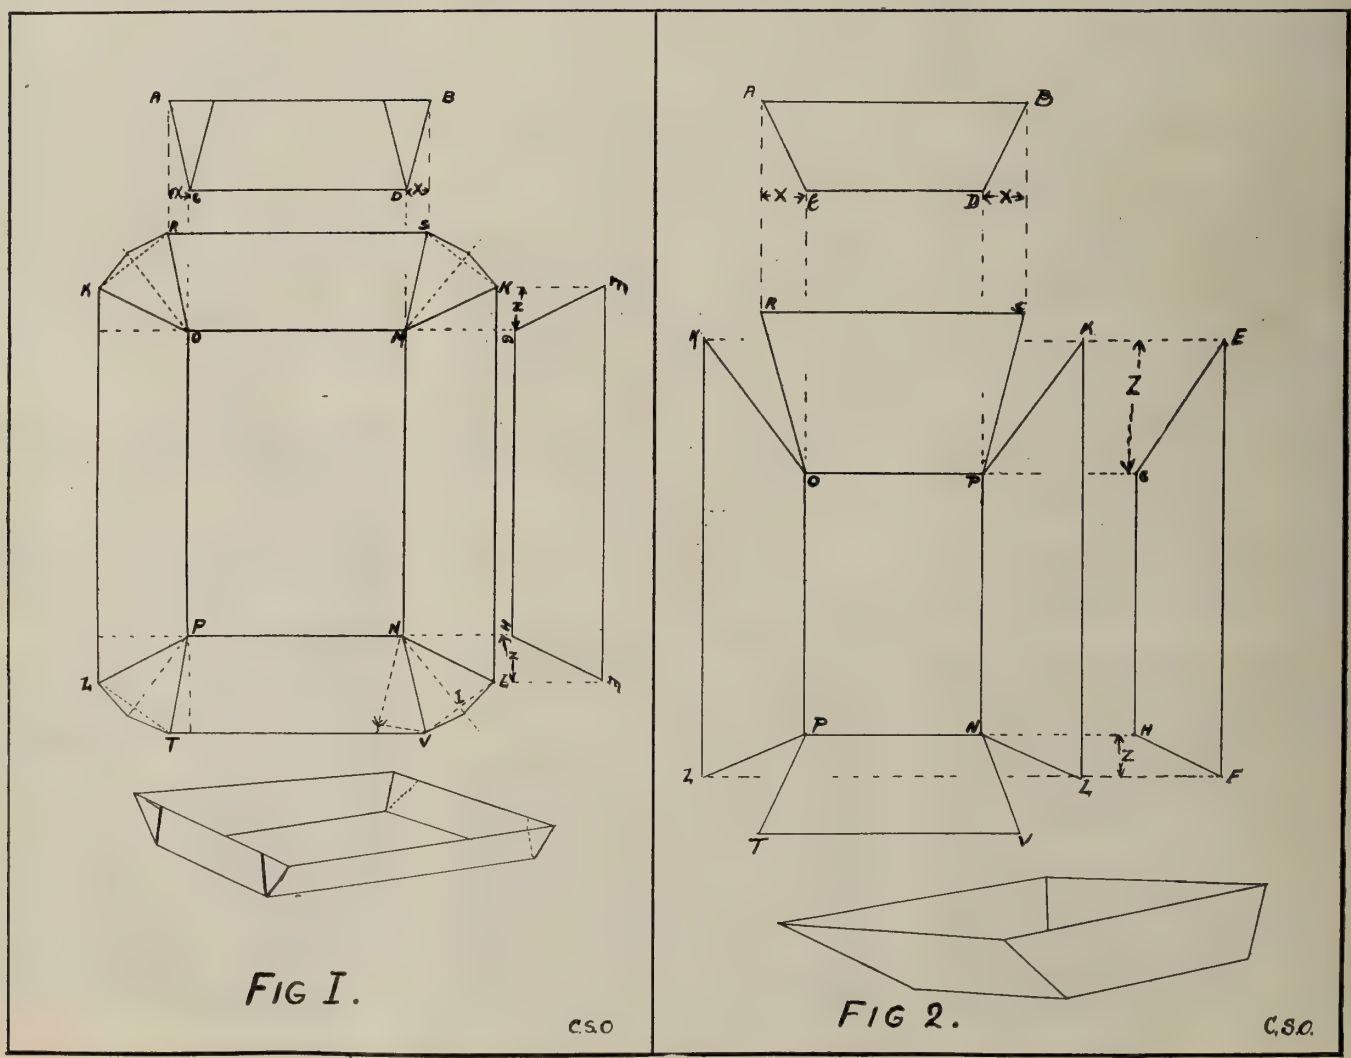
dreds of people, even if they did not stop, looked at the name on the window. Incidentally a number of food choppers were sold as a result of the practical demonstration.

Some years ago in order to get a share of the trade in the adjoining municipality of Westmount, a branch store was opened there and it was a success almost from the start. In the branch store sporting goods are one of the big features and within the last year or two automobile supplies have taken a prominent place in the store's activities, but this can best be dealt with at another time. The photographs shown on pages 37 and 38 and store plan should help to an understanding of what the new store is like.

Problems in Sheet Metal Work

By E. Bronson.

AMONG the many and varied articles made in the tinshop are dripping or bake pans and ash pans similar to those shown in the accompanying drawings. As articles of this nature are of such a simple thing to draw out patterns for, they are seldom or ever run over for practice. Still, however, we submit them in the hope that even if well known, they may possibly be brought to the attention of the boys or improvers to whom they will be helpful.



In the pan shown in Fig. 1 we have what is generally known as a dripping pan or bake pan. The particular idea or point to keep in view in making a pan of this nature is that the corners are lapped or folded in such a way, that even though nearly full of any hot liquid, they will not leak.

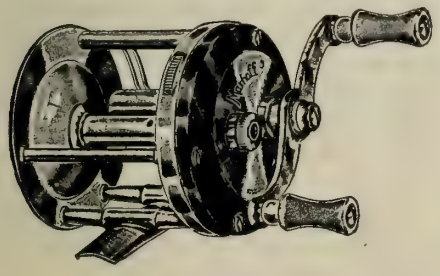
To construct pattern it is necessary first to lay out an end and side view of at least one corner of the pan in order to get the slant height of sides and ends. As is well known, the end view gives the correct measurement of sides and the side-view the correct measurement of ends. In Fig. 1 let A, B, C, D be end view of pan, and E, F, G, H, side view. Draw a square or oblong equal in width and length to C-D and G-H continuing lines out some distance or at least equal to depth of sides and ends of pan from the ends O-M and P-N mark out a distance equal to the slant height of pan as shown in side view by E-G and F-N, and from O-P and M-N on sides mark out side as shown by A-C and B-D in end view. From the point where the dotted lines from P-O and M-N meet line R-S and T-V mark out the difference in width between top and bottom of pan, as shown by X in end view, connect points R-S and T-V. From the points where lines carried from O-M and P.M. meet lines K-L, mark out the difference in length between top and bottom of pan as shown by Z in side view. connect points K and L to O-P-M and N. This concludes the pan itself, there still remains the lap on the end. **Repeat instructions from here when developing Fig. 2.**

As the four corners are all the same we will only deal with one. Connect points V and L with line, and from its centre, I, as shown draw a line from bottom corner N, carrying it out an inch or so, with point of compasses at N as a centre and N to I as a radius, strike an arc on end of pattern, with V as a centre and V-I as radius strike an arc cutting one struck from point N. Connect N and V to this point, by carrying line from N on until it meets top of pattern, the distance from N to top of pattern is the length required on line N-I. Connect V and L to this point and it will make lap on corner of right size to finish even with top of pan.

No allowance is made in this pattern as this is fixed by the size of wire used in making pan.

The method of getting pattern of corner, can be done with square by placing square along lines N-I-V and noting distance from N to 1 and I to V, then placing square on opposite side of line N-V and mark along edge of square, the point of square will meet same point as the two arcs in previous method, then with rule or square, measure the extra distance required and place on line N-I. Thus getting same results.

New Goods Offered Canadian Hardwaremen



THE MARHOFF LEVEL WINDING REEL.

The Marhoff Level Winding Reel is manufactured by the William Shakespeare Jr., Company, of Kalamazoo, Michigan, U.S.A., and is now being offered to the Canadian trade.

The features of the reel are said to assure good results in casting, owing to the line being evenly and smoothly laid on the spool, in winding, by a line guide, which is automatically propelled back and forth. The reel is also equipped with a combination click and drag, which is operated by a milled thumb wheel, and can be set to seven different degrees of resistance for controlling the spool.

The head-box is made of hard-rubber inlaid with metal, and all exposed parts are heavily nickel plated. The reel is absolutely quiet and smooth-running, and the frame is very staunch and rigid, while the end thrust of the spool journal is supported by perfectly adjusted spool-journal caps, fitted with genuine imported carnelian agate jewels.

Owing to the results accomplished,

Marhoff Reel.

this reel has been barred from all turnament casting. It is especially adapted for moonlight fishing, as it requires no attention in winding, and also proves most valuable when an angler loses his head in a battle to land a game fish.

In design, finish and workmanship it is of a high order.

"UNIVERSAL" HOT WATER BOTTLES AND LUNCH BOXES.

Landers, Frary & Clark, New Britain, Conn., have added to their line the new "Universal" aluminum hot water bottles and the new "Universal" lunch boxes.

The "Universal" lunch boxes are said to solve the problem of the noonday meal, for the man, woman or child who has to eat luncheon away from home.

One of the most important features of the lunch box is the "Universal" vacuum bottle and drinking cup. The bottle has a capacity of one pint, and is warranted to keep the contents hot for 24 hours or cold for 72 hours.

The bottle is made of glass, highly silvered with a heavy tin guard, to which the cup cover can be quickly and firmly attached. This cover, stamped from a

Universal Lunch Boxes.

single piece of tin, is fitted with folding handles and makes a drinking cup of ample size. When it is locked on the bottle it holds the cork tightly in place and prevents leakage.

One of the new features of the "Universal" lunch box is the metal spring bottle container. This fits securely into the case and in turn firmly holds the vacuum bottle. By this method any sudden jar is readily taken up by the base of the container. The spring can be easily removed for the purpose of cleaning, and, all the parts being metal, will last indefinitely. The sanitary advantages of this construction are at once apparent, as there is no cloth or cardboard packing to become wet and mouldy. A metal rack securely holds bottle and case in the lunch box.

Universal Hot Water Bottle.

The food drawer, when closed, is held securely in place by an automatic spring catch, making a strap or other additional locking device unnecessary.

Another improvement which appears only in the Nos. 20 and 320 lunch boxes is the addition of two aluminum trays, each 4⅜ inches square by 1¾ inches deep, which are placed in the bottom of the box.

The lunch boxes are made in tan finish, with brass trimmings, and in black finish with nickeled trimmings.

The new "Universal" aluminum hot water bottle stands vertically on any flat surface, and does not have to be held while being filled with hot water.

The neck is of such ample diameter that it can be filled quickly, easily and without spilling. The cap or stopper, which, on account of its long thread, prevents any possibility of leakage, can be readily loosened by the ring or by the large slot in the top.

A bag or cloth covering is furnished with each bottle. This bag is made of durable flannel or cotton felt, light blue in color, and entirely covering the bottle, thus protecting the body from the extreme heat and contact with the metal.

The aluminum, owing to the nature of the metal, keeps the water hot for a longer period of time than was possible with the old method of using a rubber bag.

The bottle is made from one piece of non-rustable metal without seams, and the company claims that it will last indefinitely. The aluminum is highly polished, does not tarnish and can be readily sterilized.

Western Notes.

J. T. Macdonald, Calgary, whose store on 8th Ave. was demolished to make room for a new post office, has moved into a fine store in the Elna Block, almost opposite. On Friday, May 15, there was a fire in the offices of a film company in the same building, which for a while threatened to destroy the block.

J. H. Bodel, manager of the hardware department in the Hudson's Bay Co.'s store at Calgary, has just returned from a three months' trip to Great Britain, France, Germany and Austria. While abroad, he visited Leipsic Fair, and many British and German factories manufacturing hardware and toys. Mr. Bodel, who was appointed manager of this department when this company commenced to handle hardware in Calgary, was for seven years with Lewis Bros., Montreal, and spent a year with Goodwin's, Limited, Montreal, before going to Calgary.

Current News of the Hardware Trade

Sarnia Man Elected.

Oscar B. Mueller, of the Mueller Brass Works, Sarnia, Ont., was elected president of the American Waterworks Association, at the Philadelphia convention.

Hardwareman President.

Preston, Ont.—A. R. Bernhardt has been elected president of the local branch of the Retail Merchants' Association.

Obituary.

Collingwood, Ont.—The death occurred here of Wm. Hamilton, who was engaged in the tinsmithing trade with his brother on Collingwood street.

President Winnipeg Board of Trade.

M. F. Christie, secretary-treasurer the G. F. Stephens Co., has been elected president of the Winnipeg Board of Trade, which for some years past has been doing prominent work regarding western freight rates. Mr. Christie is well qualified for the position. He has always taken a deep interest in the western freights question, and has made a careful study of the subject.

New Hardware Manufacturing Firm.

Oshawa, Ont.—The Vanstone-Reade Manufacturing Co., Toronto, has purchased the Stacey Bros. factory from Stacey Bros., Ltd. The new firm will manufacture steel locks, bolts, hinges, and shelf hardware. It is expected that the new plant will commence operations about July 1. Mr. Reade was formerly associated with the Kennedy Hardware Co., Toronto, and Mr. Vanstone was a manufacturers' agent in the same city.

Westerner for Bisley.

Alexander Martin, president of Alex. Martin Sporting Goods Co., Ltd., Calgary and Edmonton, is going with the Canadian Bisley team to England in July. This will be his third trip with them. Mr. Martin won the prize this year for an aggregate of Rockcliffe shooting combined with the Indoor Rifle League. Fred R. Martin, a brother, also does considerable shooting, and attended Bisley for 18 years before coming to Canada. Both take an active interest in trap shooting.

Vice-President Manitoba C. M. A.

W. S. Fallis, of the Sherwin-Williams Co., of Canada, Ltd., was unanimously elected provincial vice-president of the Manitoba branch of the Canadian Manufacturers' Association at the annual meeting of that body held recently.

W. L. Helliwell, of the Gurney Northwest Foundry Co., was elected as a member of the executive committee. The annual report of the retiring chairman, W. S. Fallis was read by him and was a comprehensive resume of the work accomplished during the past year by the Manitoba branch of the association. One of the matters referred to in the report was western freight rates regarding which Mr. Fallis said:—

"Though a reduction of the freight rates was obtained through the railway commission, yet it is felt that Western Canada still suffers from an inequality with Eastern Canada and your branch will not cease its efforts individually and to co-operate with other bodies until freight rates are obtained in Western Canada on an equal basis with that of the East."

T. A. GAETZ, Red Deer, Alta.
Who was elected President of the Alberta Retail Merchants' Association at the annual convention in Calgary.

Personals.

H. A. Fisher, of the Reading Hardware Co., Reading, Pa., was in Montreal this week.

Jas Hossack, of the Lufkin Rule Co., Windsor, has just returned from an extensive trip through the West and will start out next week on a trip to the East and the Maritime Provinces.

A. E. Lancaster, Hudson, Que.; J. A. Moquin, Eastman; J. B. Damour, St. Philomene; Rene Laberge, Chateauguay; Geo. Daoust, St. Anne de Bellevue; A. A. St. Arnaud, St. Genevieve, and P. Desjardin, St. Therese, were among the out of town buyers visiting Montreal this week.

Ernest F. G. Sinton, representing Henry Disston & Sons, Ltd., Toronto; C. O. Granstand, of Stanley Rule and Level Co., New Britain, Conn.; E. S. Knox, of New York Stamping Co., Brooklyn; Mr. Marks, of General Leather Goods, Ltd., Toronto; and E. H. Day, of A. G. Baylis and Sons, Studley, Warwickshire, Eng., have been calling on the trade in Montreal.

New Firms.

Regina, Sask.—The Motor Supplies, Ltd., has started business.

McTaggart, Sask.—The Rogers Hardware Co. has started business.

Montreal, Que.—Villancourt & Bastion are opening a plumbing business.

New Firms in West.

Soloman Kravitz, formerly clerk with Sector Bros., Luseland, has bought out the bankrupt stock of Winkler Bros., at Luseland, Sask., and has already added considerable to this stock.

Spalding & Toepper is the name of a new hardware firm just opening up in Kerriemuir, Alta. Both Mr. Spalding and Mr. Toepper have for some time been acting as clerks in the hardware store of Methias McBrien, Castor, Alta. Kerriemuir is a new C.P.R. town.

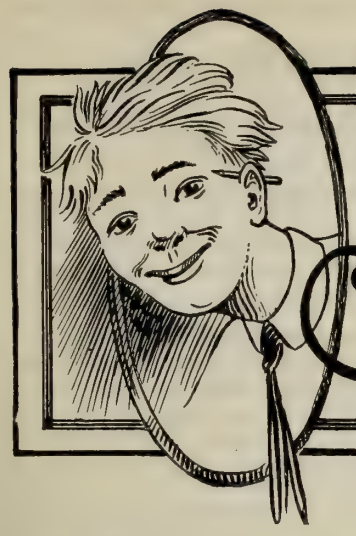
Fire Losses.

Calgary, Alta.—S. B. Ramsay, dealer in wallpaper and paints, has recently suffered a loss by fire.

Business Changes.

Pense, Sask.—H. McGillivray has succeeded to the hardware business of B. L. Van Slyck.

Roland, Man.—The hardware business of J. E. Buch & Son has been sold to Mr. Horn.



Hawkeston, Ont.—R. G. Kendall has disposed of his hardware business to Erson Kendall.

Saskatoon, Sask.—It is reported that the stock of the Westhaven Hardware Co., Ltd., has been sold.

Toronto, Ont.—Jas. Atkinson has purchased the hardware and crockery business of Geo. E. Membery.

Leamington, Ont.—R. Lenden, hardware merchant, has purchased the stock of the Ontario Hardware Co.

Scollard, Sask.—The hardware stock and fixtures of the estate of C. M. Thompson has been sold to J. H. Duckworth.

THE JUNIOR CLERK'S PAGE

The Art of Commercial Enameling

HARDWARE and Metal recently received an inquiry from a hardware clerk asking for information regarding the enameling of cooking-ware and other articles.

The accompanying article, giving the desired information, is an abstract of a paper contributed to the American Society of Mechanical Engineers by Raymond F. Nauler.

In the preparation of enamels the purity of the raw materials to be compounded must be certain, and in the cases where materials can vary in strength the actual analysis of the substance must be known to assure proper results. In many cases the secret of an enamel lies in its formula and so the compounding of the batches is very carefully guarded, only a person of responsibility having charge of weighing the ingredients.

The various materials are generally kept in bins which are numbered, the person in charge of the mixing having the formula stated in terms of these numbers. The properly weighed batch is thoroughly mixed, this being accomplished either by shoveling carefully on a specially prepared floor, or my mechanical mixing by means of a rotating agitator.

The product of the mixing room is taken to the smelter in which the various ingredients are fused together in the form of a mass having the characteristics of glass. The furnace in which this operation takes place is a special reverbatory furnace similar to that used in the puddling process in the manufacture of wrought iron.

The coal is placed on a grate at the front end of the furnace and the burning gases pass over the bridge wall, strike the roof and are deflected against the batch. The fluxing materials then melt down, and, as the heating is continued, dissolve the refractory constituents.

If the batch is properly stirred and the temperature of the furnace carefully regulated, the product of this operation is a clear, transparent glass containing no particles of unfused material. When a test of the fusion comes up to this standard the furnace is tapped and as the liquid glass flows into a tank of cold water it is broken up by the chilling action of the water, the result being a thorough granulation of the product. The material thus prepared is known as "frit."

The next step in the preparation of the enamel involves grinding the frit to a fineness at which it can be applied to the surface of the metal. The mill here used is the ordinary pebble mill lined with porcelain brick and containing very hard flint pebbles. In the cast iron industry two general processes are used, the dry and the wet; in sheet metal work only the wet. In the first case the frit is ground dry, the pulverized enamel being sprinkled on the hot cast-iron piece. In the wet process a certain percentage of pure white clay is placed in the mill with the frit and a certain definite amount of distilled water. When certain grades of enamel are to be manufactured various compounds are also added here to aid in producing desired colors, gloss, and opacity. An instance of this is the addition of tin oxide in the mill in the production of white cooking utensil enamels.

The fineness to which the enamel is ground depends upon the particular use to which it is to be put, manner of application, and other factors. In the wet process the essential feature is that it be fine enough to remain suspended in the water assisted by the clay and the so-called "vehicles" mentioned below.

Before applying the enamel to the metallic surface it is prepared by a process known as "setting up." This involves the addition of certain chemicals to the enamel as taken from the mill, the function of this addition being to assist the clay in holding the enamel particles in suspension. Substances so added are termed "vehicles." At this stage the enamel must be diluted with distilled water to the proper consistency for application to the metal.

In applying the enamel to the metallic surface three general methods are in use: The first, applicable to small pieces only, is known as "dipping," the piece being dipped into the enamel, the excess of which is shaken off, leaving a thin coating on the metal. The second method, known as "slushing," involves pouring the prepared enamel over the surface and allowing it to drain. The third method, which is the principal one used on larger apparatus, involves spraying the finely ground enamel on the metallic surface by means of the compressed air atomizer.

The first type of furnaces in use is known as the muffle furnace and involves the use of a large fire-clay oven externally heated by means of coal, gas, or other fuel. The apparatus to be fired is placed on suitable supports in this muffle. The other type of furnace is known as the direct type of furnace, in which the heat from the fire is taken up by the walls of the firing chamber and radiated to the apparatus placed within the chamber on suitable racks.

In a furnace for firing smaller ware the charging mechanism is a fairly simple matter, it being necessary merely to place the material in the furnace by means of a small fork operated by hand or mechanically. But in the manufacture of engineering apparatus where a single piece may weigh 3,000 to 4,000

(Continued on page 58.)

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

With the advent of fine weather the demand for hardware and paints has been stimulated and retailers are now very busy selling spring and summer goods. The metal situation remains practically unchanged with only a limited amount of business passing. Nails have advanced in price at Toronto, Hamilton and London. There is a scarcity of turpentine at Toronto. Copper rivets and burrs have also changed in price. An improvement is reported in the demand for building materials. Paints and varnishes are moving rapidly and retailers throughout the country are well pleased with the improvement in business since the advent of warm weather.

MONTREAL.

MONTREAL, May 20.—Business has been decidedly better lately with both jobbers and retailers, due no doubt, in a large measure to the more seasonable weather that has prevailed. The "Clean-Up" campaign is on this week and the dealers report that it has helped their sales of cleaning utensils, scouring and polishing goods to an appreciable extent. Many timely window displays have been made and a majority of the dealers have also arranged goods inside the store in a prominent position that suggest themselves as suitable for the clean-up week. Judging from the first few days the movement has been a pronounced success in Montreal and it will, no doubt, be made an annual feature.

Spring Goods in Big Demand.

There has been a noticeable increase in the amount of business in seasonable lines during the last week or two. Repeat orders are coming in daily for such lines as hammocks, baseball goods, wire cloth, fly screens, ice freezers, garden hose and sprinklers, lawn mowers and rollers, etc. While these goods were late in getting started they appear now to be making up for the lost time.

Fishing Tackle.

A good deal of business is being done in fishing tackle at the present time. This line, like many others, was held back by unseasonable weather, many of the lakes and rivers not being free of ice until late. There has been a good movement of all kinds of tackle during the last couple of weeks.

Builders' Hardware.

Owing to the large amount of construction work going on, especially in the suburban districts, there has been a good demand for builders' hardware. This has been the case for several weeks and the business shows no immediate signs of dropping off.

Rope, Twine, Etc.

Since the opening of navigation there has been more interest in all lines of rope, and sales have been quite generous. Prices have been maintained and are as follows: Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are:—Best Manila, 650 feet to pound, 13½c; Manila, 600 ft., 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

Nails and Screws.

Though there has been some talk of a new price for nails, nothing has materialized yet. The tendency seems to be for an advance. The present price is $2.20 base for steel wire nails, and $2.60 for cut nails. Screws are still quoted with the discounts as listed in the current market quotations and no change is anticipated for a time at least.

Stoves and Ranges.

The trade in this department has been largely confined to oil stoves and heaters and gas stoves, though there has also been some business done in coal and wood ranges, principally for summer cottages. For this latter purpose the lighter models seem to be mostly desired. Camp stoves have also been moving with the advent of warmer weather.

Metals.

A general weakness characterizes the metal markets this week and while there have been no actual changes in the prices as quoted last week, the tendency is for lower prices in several lines. Tin continues to decline, with slight daily fluctuations, in the London market. The price locally is still quoted at 41 to 41½, to which point it went last week. Antimony is quoted at $8.50 in a dull market. The quotation for spelter remains at $6 and the market featureless. Copper, which dropped last week to $16 is still held at that figure, and the market is weak. Lead, which last week was marked up to $5.25 is again back at $5 per hundred and pig-iron is unchanged.

Lead and Lead Waste Pipe.

The demand for lead and lead waste pipe has been about the average. The market is quiet and the price of 7½ and 9 cents a pound with discounts of 7½ per cent. is still quoted.

Bar Iron.

The market on bar iron is firm and the quotation is $2 to $2.05 base, Montreal. Business is about the average.

TORONTO.

TORONTO, May 21.—The most important change during the week was the advance of 15 cents per keg in the price of wire nails. The advance was not unexpected, as reports in Hardware and Metal in the issues of April 4, April 11 indicated that wire nails would advance as a result of the duty placed on wire rods used in the manufacture of nails. Manufacturers claimed that they were not making any money on nails, and quotations were ranging from $2 base and upwards.

Advance in Nails.

The ruling price is now $2.25 base, and a further advance before long would not be a surprise to those who keep closely in touch with the nail situation. Copper rivets and burrs have changed in price, and are now quoted by Toronto jobbers at 35 and 12½ per cent.

Rope, Twine, etc.

Cordage manufacturers and jobbers report that business is as good as could be expected, and that a very good demand was caused by the opening of navigation. One representative reported that the business outlook was splendid, and he was hopeful of a good year's business. Toronto quotations are as follows:—

Best Pure Manila	15c lb. base.
British Manila	11c lb. base.
African Hemp	11c lb. base.
Sisal Rope	10½c base.
Lath Yarn, Single	9¾c lb.
Lath Yarn, Double	10¼c lb.

Other lines are shown in current market quotations.

Binder twine prices are:—650-ft. twine, 13½c lb.; 600-ft. twine, 11c lb.; 550-ft. twine, 9¾c lb.; 500-ft. twine, 9¼c lb.; ⅛c per lb. allowance on 5 tons and over; ¼c lb. allowance on 10 tons

and over; delivery allowed on 300 lbs. and over.

Stoves, etc.

A fair volume of business is passing in the stove line. The demand for gas ranges and summer stoves of various kinds is very brisk.

No price changes in stoves or enamelware have been reported.

Old Materials.

The following prices are being paid, f.o.b., Toronto, on old materials:—

Tea lead, package	2½ to 3½c lb.
„ „ chest	3c to 4c lb.
Lead (heavy, pipe, etc.)	3c to 4c lb.
Brass, heavy	8c to 9c lb.
Brass, light	7c to 8c lb.
Zinc, heavy	3c to 4c lb.
Copper, heavy	10c to 11c lb.

Rubbers, such as old rubber, boots and shoes, according to trim, 5½c to 6½c lb.; overshoes, lumbermen's rubber boots, etc., 5c to 6c lb.; auto tires, etc., 4½c to 5½c; bicycle tires, 2c to 3c.

Metals.

The metal markets are in much the same condition as last week, with only a fair amount of business passing. The following prices are being quoted at Toronto:—Tin, 35½c to 39c lb.; lead, $4.90 to $5 per 100 lbs.; copper, 15c to 16½c lb.; antimony, 8¾c to 9c lb.; zinc, 5½c to 6c lb.; ingot brass, red, 13c to 15c lb.; ingot brass, yellow, 12c to 14c lb.; half-and-half solder, 24c to 26c lb.; pattern aluminum, 22c to 24c lb.; ingot aluminum, 18½c to 19½c lb.; acme solder, 19½c lb.; easy wiping solder, 20½c lb.; star extra, 21¾c lb.; wire solder, 27c; tinkers' bar solder, 28c lb.; lead wool, 8c lb.

Bar Iron.

No change has taken place during the past week, and Toronto jobbers are quoting bar iron at $2 base, f.o.b., Toronto, and $1.90 base, f.o.b., factory.

Quotations on Furs.

Toronto fur dealers are quoting the following prices for Ontario furs:—Skunk, prime, extra large, $1.50 to $5; muskrats, spring, extra large, 65c; large, 55c; medium, 40c; small, 25c; weasel, No. 1, extra large, $1.50; No. 1, large, 85c; No. 1, medium, 50c; bear, No. 1, extra large, $22; No. 1, large, $17.50; No. 1, medium, $13; No. 1, small, $8; cubs, $2 to $12, as to quality. Mink, No. 1, extra large, $6 to $8.50; No. 1, large, $4 to $7.50; No. 1, medium, $2.25 to $5. Fox, No. 1, extra large, $8 to $12; No. 1, large, $6.50 to $10; No. 1, medium, $2.25 to $5; No. 1, small, $1.75 to $4.

LONDON.

LONDON, May 21.—On account of warm weather business is very good here this week. The retail merchants have all they can look after. All summer lines have started to move and a very cheerful spirit prevails.

Changes in Prices.

Wire nails are now $2.25 base. Jobbers seem to think this price will be maintained. Copper rivets and burrs (burrs not exceeding one-third weight of rivets and burrs combined) are now quoted, discount 35 and 12½ per cent.; copper rivets, discount 35 and 12½ per. cent.; copper burrs, discount 15 per cent.

No change has taken place in quotations on screws and jobbers are quoting the following prices: Flat head, bright, 85, 10, 7½, 10, 10 per cent.; round head, bright, 80, 10, 7½, 10, 10 per cent.; flat head brass, 75, 10, 7½, 10 per cent.; round head brass, 70, 10, 7½, 10 per cent.

Paints, Oils, Etc.

With the advent of fine weather there has been an improvement in the demand for paints, oils, glass, etc. Linseed oil is quoted as follows:

	Raw.	Boiled.
1 to 2 barrels	63c	66c
3 to 5 barrels	62c	65c
6 to 9 barrels	61c	64c

Less than 1 barrel add 7 cents per gallon.

Turpentine quotations are:

1 barrel lots	65c gallon
2 to 4 barrels	64c gallon

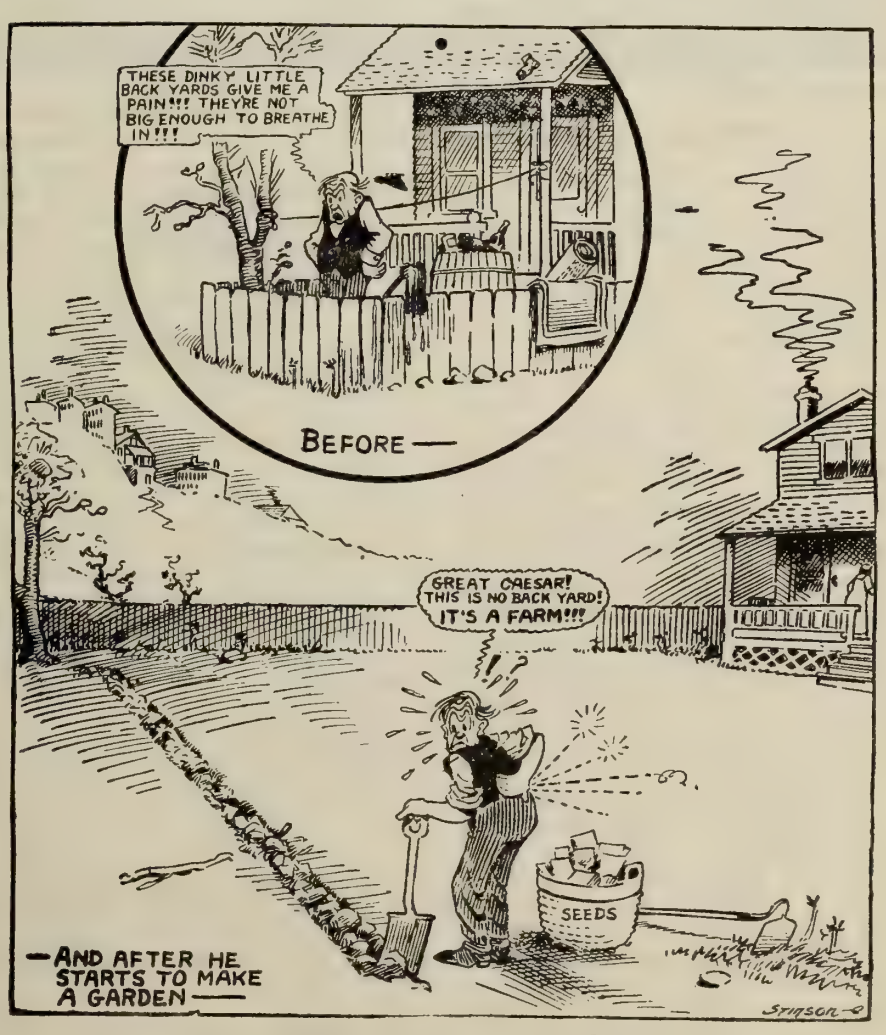
For less than 1 barrel add 7c gallon.

The following prices are quoted at London on seasonable goods:

Rope.—

Pure Manila	15c base
British Manila	11c "
African hemp	11c "
Sisal	10½c "
Cotton rope	25c "

Poultry Netting Staples.—



100-lb. keg	$4.50 per 100
25-lb. box	$4.85 per 100
10-lb. box	$5.25 per 100

Fence staples, all sizes, bright, $2.55 keg, galvanized, $2.85; fence hooks, galvanized, $2.85.

WINNIPEG.

WINNIPEG, May 21.—While business could desire, there is yet a conness is not yet as brisk as some siderable improvement noted in several lines—this due in a large measure to the improvement in the weather.

Price changes have been few. White lead, however, was on the 15th advanced about 20c. There was no immediate

A little spading makes the yard bigger.

cause for this, other than the fact that handlers have under-estimated the cost of marketing the product for some time. In other words, it seems that dealers have been getting an advantage in price, to which, considering general conditions, they were hardly entitled.

Building Paper Active.

The great improvement in the weather has done much towards stimulating building work generally, and the demand for the goods needed for building has advanced materially. Nails have been moving well. The same is true of building paper, and, though the call for builders' hardware is light as yet, there is good reason to expect that this will improve quite largely.

Building permits this year seem to indicate the construction of very many apartment houses. So evident is this, indeed, that it is now regarded as quite possible that there will be a dearth of stonemasons and bricklayers. These apartment houses, of course, take longer to erect than ordinary residences. The large demand for builders' hardware, therefore, which they must bring will quite probably be late in starting.

Fortunately, however, a number of these apartment houses were gotten under way last fall, and are now ready for the installation of hardware and plumbing fixtures.

Supplementary Ordering.

From the country a good demand for fencing is noted, and in the city garden and lawn tools are still in big demand. Retailers whose stock was well-nigh cleaned up during the clean-up, paint-up campaign, are now finding it necessary to place supplementary orders.

By the paint houses the clean-up, paint-up campaign is being voted a great success. It has been possible already to trace a good part of the results, and there is no doubt that the demand for paints was very gratifying. The call for other lines, such as garden tools, was heavy, but as yet it has not been possible to compare this with any degree of accuracy with the sales of former years. It seems, however, that the campaign met with almost greater success than was to be expected, and dealers are almost certain to fall in with this movement even more heartily next year.

Movement in Heating Lines.

In heating lines an improvement is noted. Stoves have not been moving exceedingly well, though a slight betterment is reported here. Furnaces seem to be moving a great deal better. One Winnipeg house reports having done more business the first two weeks of May than they did in the whole of March and April.

The managers concede, of course, that March and April were slow months, but, despite this find the results in May are highly gratifying.

COMMERCIAL ENAMELING.

(Continued from page 55.)

pounds, it is necessary to have a large mechanical charging machine.

The apparatus to which the enamel has been properly applied is placed in the furnace, which is maintained at the proper temperature. This temperature varies with the nature of the enamel, and, in cases of high silicon acid-proof enamels, reaches in the neighborhood of 2,500 degrees Fahrenheit. The control of the burning is made possible by the changes which occur in appearance of the enameled surface as fusion takes place.

At first the fine particles of enamel begin to fuse together and a general blister condition exists, giving the surface a very dull appearance. But as the enamel matures, this dull appearance gives way to a bright gloss, which, when properly developed over the entire surface, is indication that the piece should be withdrawn from the furnace. The time required to burn a piece properly depends upon the temperature of furnace, thickness of metal, and nature of enamel.

In general, there are two kinds of enamel, known as ground coats and cover coats. The former serves as a bond between the enamel and the steel, and the latter serves to build up the body of the enamel and presents the finished surface.

In the ground coat, color is no object. The coat is the one which forms the major part of the enamel, and, if definite color, opacity, etc., are objects, the necessary ingredients for their production are introduced here. In the manufacture of acid-proof enamel, the cover coat is essentially a high silicate and must be free from any metallic oxides, such as oxide of tin, lead, iron, etc.

The piece to be enameled receives one ground coat which is burnt well into the steel at a high temperature. The over coats may be one or two in number for ordinary enameling, but should be at least triple for acid-proof work. In the production of acid-proof apparatus, the use of a ground coat or cover coat is now eliminated, and the same material, which in place of being an enamel, as commonly termed, is in reality a boro-silicon glass and without the use of any metallic oxides in its compounding.

The constituents of the frit used as a cover coat for "dark blue" cooking-ware would be:

	Per Cent.
Silica (SiO_2)	53.5
Alumina (Al_2O_3)	9.5
Soda (Na_2O)	20.3
Potash (K_2O)	3.6
Boric Oxide (B_2O_3)	10.2
Cobalt Oxide (CoO)	2.6
Manganese Oxide (MnO_2)	0.3

The production of a good white enamel either for cast-iron or sheet-steel work may be said to depend, at the present time, upon the use of tin oxide. Great have been the efforts to substitute less expensive substances, such as compounds of antimony and lead. But an antimony white which looks good alone is plainly seen to be off-color when compared with a good tin oxide white.

There are any number of formulæ for black enamels, but when the results are closely compared we find that the colors range widely through brown-blacks, blue-blacks, purple-blacks, etc. Certain compounds of manganese and iron used together give a color approaching black. Other formulæ call for the combined use of oxides of manganese, cobalt, and copper. Again, we find oxide of nickel added to the above three oxides.

A color much seen in enamels is blue and the use of cobalt is very satisfactory in the production of this color in various grades of intensity. Manganese alone produces purples and violets, and in combination with cobalt gives various shades of purple-blue.

Green enamels are chiefly produced by the use of chromium oxide and copper oxide, while in some cases a mixture of copper and cobalt oxide is used.

Reds of various shades are produced by the use of red oxide of iron. In connection with it we find that tin oxide aids greatly in giving opacity and bringing out the color. In the production of brown enamels we may use ferrous chromate. Various yellows are produced by salts of cadmium, chromium, and uranium.

The more delicate shades of rose and purple are produced by the use of gold compounds. So-called "pink rose" is used in the manufacture of certain artistic enamels. Perhaps the best known gold compound used in enamel coloring is "purple of Cassius." The exact composition of this product is a question. It is made by the combined use of auric, stannous, and stannic chlorides. The color produced is also commonly called "purple of Cassius."

At a meeting of the Winnipeg Board of Trade on May 12, Mr. James Ashdown criticised the Dominion Railway Board for the decision they handed down in the Western freight rates case, claiming that they were Easterners, and did not have the West at heart.

You've Seen Our Ads.

There's no hiding the Martin-Senour advertisements this year—they stand right out in the best Farm Papers, Religious Publications, Magazines, etc., all through Canada—working hard for our dealers. Write Montreal Office to-day for our special new dealer's proposition.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, May 20.—With the "Clean-Up and Paint-Up" campaign in full swing this week the paint dealers are all busy and consequently happy. Jobbers report that the campaign has had the effect of stimulating paint sales very materially and business this spring has been exceptionally good. Retailers have been featuring clean-up goods and utensils this week and in the majority of cases have co-operated with the officials in charge of the campaign in every way possible. There have been no changes in prices since last report, but business in all lines has continued brisk.

Linseed Oil.

The demand for linseed oil has been very good and a continuance of the present conditions is looked for. Prices have not changed and are quoted as follows:

Raw Linseed—
1 to 4 barrels ..... 60c per gal.
5 to 9 barrels ..... 59c per gal.
Boiled Linseed—
1 to 4 barrels ..... 63c per gal.
5 to 9 barrels ..... 62c per gal.

Turpentine.

There has been no change as yet in the price of turpentine, though it has been intimated that prices might be shaded a little later on. Stocks are low with many of the dealers at present, but there will probably be a plentiful supply very soon. Sales have been satisfactory, along with paints, and quotations are:

1 barrel ..... 64c per gal.
5 barrels ..... 63c per gal.

Five-gallon packages, 5 cents advance; packages extra; terms net.

White Lead.

White lead sales have been about the average and the prices are unchanged at $8.05 per hundred for ton lots, and $8.25 for less than ton lots.

Glass and Putty.

There has been no change in the price of glass here. Quotations are: Star, $3.40 base, net, for country, and $3.65 base, less 5 per cent., city; double diamond, $5 base, net, for country, and $5.40 base, less 5 per cent. for city dealers. Plate glass is subject to a discount of 40 and 5 per cent. off list for country, and 50 and 5 per cent. off list for city dealers. Heavy shipments of glass continue to arrive and orders are being filled by the jobbers, in many instances, direct from the wharves. The demand for putty is about as usual.

Gasoline.

Quotations on gasoline are the same as at last report. Business continues good, both in the city and for country trade. Prices are as follows:

Barrels, in wood ..... 23c gallon.
In steel and drums ..... 19½c "
Tank wagon (100 gals.) ..... 19c "

TORONTO.

TORONTO, May 21.—The fine weather of the past week has had a splendid effect in stimulating the demand for painting materials. Retailers report that business has picked up splendidly, and that the demand for paints, oils, etc., is brisk. The demand for glass is only fair, and no change has taken place since the decline noted last week. There is a scarcity of turpentine at Toronto, and quotations are a little firmer, although unchanged.

Linseed Oil.

The demand for linseed oil is not heavy at present. No changes have taken place since the decline of last week. The ruling quotations are:—

Raw Linseed Oil—
Single barrels .....63c gallon.
3 to 5 barrels .....62c gallon.
6 to 9 barrels .....61c gallon.
Boiled Linseed Oil—
Single barrels .....66c gallon.
3 to 5 barrels .....65c gallon.
6 to 9 barrels .....64c gallon.

Oil in less than barrel lots, 7 cents per gallon. Cans are charged at: 5-gal. cans, 50 cents each; 10-gal., 75c each.

Turpentine.

The market in naval stores is showing strength, and prices are being well maintained. There is a scarcity of turpentine in Toronto at present. Quotations are as follows:—

Single barrels .....65c per Imp. gal.
2 to 4 barrels .....65c per Imp. gal.
5-gallon lots .....72c per Imp. gal.

White Lead.

The ruling quotations in white lead remain unchanged. Less than ton lots is quoted at $8.40 per 100 lbs.; ton lots at $8.20 per 100 lbs.

Glass.

Glass is only in fair demand at present. A discount of 20 per cent. is being quoted off the $4.25 base for 16 oz. and 25 per cent. off the double diamond list for stock cases. Cut sizes are quoted at 40-10 per cent.

Gasoline and Benzine.

The demand for gasoline is becoming more active. Single barrels are quoted at 21½ cents per gallon; benzine is quoted at 20½ cents per gallon in single barrels.

Ready Mixed Paints.

There has been a big improvement in the demand for ready mixed paints owing to the improved weather conditions. Retailers are now doing a big business in ready mixed paints, varnishes, etc.

TURPENTINE ADVANCED.

Just before going to press Hardware and Metal was advised that Toronto quotations on turpentine had been advanced two cents per gallon.

TEAM WORK.

"Work together. Make every department of the store work in harmony with every other, in short team work; that is what will bring real success in retailing."

The foregoing is the recipe for success given by a veteran retail merchant who has now retired on the competency he secured in conducting a general store in a moderate sized Northwestern town.

The whole proposition was brought forcibly to the writer's attention last week when he went into a Twin City store and found that the clerk who waited upon him knew practically nothing about the goods the firm had been advertising in the daily papers at heavy expense.

There is no excuse for this kind of thing or for anything but real co-operation between the various activities in the store. Without such team work, says Hardware Trade, there is sure to be much lost motion and in any undertaking this is certain to be expensive.

A merchant can spend all kinds of time and money in preparing and publishing the most effective advertising possible, and then lose a good part of its effect through careless or neglectful salesmanship.

Sales can be large and at good prices, but if the collection end of the business is not given proper attention, loss is sure to follow. And so it goes with every kind of store activity.

A store should be like a well designed machine, with the gear wheels meshing properly, with all shafting well aligned and the entire mechanism lubricated with the oil of enthusiasm and store spirit.

There are different ways of securing this much-to-be-desired result. Among them may be classed the periodical meeting of all hands, when the policies and problems of the institution can be discussed, plans laid and instructions given as to the work that should be done in order to make the most of the money spent for the various kinds of publicity.

United you will stand, divided you fall.

We Give You Vital Help In Trade Building

By adding Brandram-Henderson products to your line, you at once get a direct, personal interest in an Advertising Campaign costing thousands of dollars.

It has been devised and conducted to help **you.** Publicity pays when you have the right goods back of it, but the cost of a really effective campaign would probably be staggering to an individual dealer. You can get the benefit of the Brandram-Henderson campaign without paying a cent. Our program includes all good modern advertising; poster, farm journal and newspaper work; indoor and outdoor display; booklets, folders, etc., to reach the user—in short, everything you need to push sales, all prepared in your interest and aimed to bring buyers to your store.

This we do to HELP YOU SELL, and you will miss a great opportunity if you do not include B-H goods in your line. B-H goods, of course, are known everywhere. They have an established reputation that is in itself an asset to the dealer who handles them, and such goods, backed up by effective advertising, are sure sellers. Take, for example,

B-H "ENGLISH" PAINT

This is the paint made in white and tints with 70% Brandram's B. B. Genuine White Lead and 30% Pure White Zinc. Every painter knows what this means—every painter knows that B-H "ENGLISH" when put to the test of service, has proved unexcelled in endurance.

Vigorously pushed by our advertising campaign, this and other B-H products will be in greater demand during 1914 than ever before. You can get your share of the profits by hitching your wagon to B-H quality and B-H selling helps. Write us and we'll gladly send you full details.

Do you know how to build up A Profitable Paint Business?

No doubt you will answer "By selling nothing but the best on the market and satisfying your customers"; but, how are you to know which is the best paint on the market?

Over **half a century** in the paint business puts us in a position to produce paint which we know, and absolutely guarantee to be pure; the kind of paint which will bring your customers back for more, once they have tried it.

THE
BLUFF
IS
CALLED

Someone said that their brand of kalsomine covered more surface weight for weight than Muresco. We said it didn't—and we called a show-down. Do you remember that offer we advertised to forfeit $100 if anyone could prove that

MURESCO

had not as much or more covering capacity than any other kalsomine on the market?
So far there is nothing "stirring" but Muresco!
Shall we tell you why?

BENJAMIN MOORE & CO., LIMITED
2-6 Lloyd St. - - West Toronto

Dry as hard as stone and as smooth as silk.

"SILKSTONE" (COPYRIGHT)

The Flat Wall Colors That Satisfy Most Particular People

"Silkstone" gives a soft, mat-like surface and dries without gloss, yet with plenty of life.
Can be washed with castile, or any soap not containing lye, without losing any of its beauty.
Sanitary and very durable. It is more economical than distemper colors and can be used where distemper cannot.
Let "Silkstone" prove that it's a business-builder—send a trial order.

We want agents in every unrepresented district.

Get Into Shape

Get into shape to meet the demand, by writing us for full information concerning

"Millers Falls" Breast Drill
No. 200

This is a "coming" tool. It has that "little better" quality that tells so strongly in making sales, and represents about the best we can do, up to date, in making Breast Drills.

Our Drills have always had a good reputation; this Drill will add to it. and the live dealer who takes advantage of this fact will reap the reward.

We get many inquiries concerning it from drill users. We prefer to answer these through dealers who handle the Drill. Will you become one? Some one in your neighborhood is going to get the orders. Shall it be you?

Write for New Dealers Catalogue, showing the complete Millers Falls Line.

MILLERS FALLS CO.
Millers Falls, Mass.

Camp Chairs

Made strong, exceedingly light in weight, folds very compactly and has back support.
Canvas seat.
White or varnish finish.
Wrapped six in a bundle.

C.P. "Canada Paint"

is a "ready-to-use" Paint

made of the purest materials, finely ground and mixed by special machinery. This Paint is the result of our many years' experience in Paint-making. It is made of pure lead, pure zinc, pure linseed oil. These materials, with the coloring pigments and driers, are combined in correct scientific proportions, and ground together in powerful mills. The result is a paint that covers the greatest amount of surface, and wears for the longest possible time.

Put up in air-tight Imperial Measure cans, attractively labelled. Forty-five popular colors and White and Black. There is no better Paint made than "CANADA PAINT."

To the dealer who is interested in an exclusive agency proposition, who wants the best that the market affords, and wants a well-advertised line, we can recommend "CANADA PAINT." It is the kind of a product that will build up a big paint business.

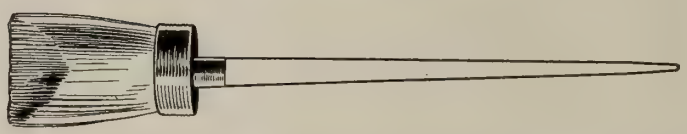
RAMSAY'S PAINTS & VARNISHES
SATISFIED CUSTOMERS APLENTY
YOUR PERFECTLY GOOD PROFIT

That's a pretty good line up, and you can't do any separating—those three always stick together.



More than 70 years ago Ramsay's started to make good paint, they kept it up, and now the Canadian public know it.

Any man who comes into your store for paint and gets Ramsay's will come again when he wants more, because every brush of paint out of the can helps to write a good advertisement for Ramsay and for you.

PAINT on the FARM

Here is a Message for the Paint Dealer in the Rural Communities:

"As big as a barn" is an expression often used for comparative purposes.

For a starter, figure out the bigness of a barn and include the farmer's outbuildings.

Then count up the number of barns that are not painted in your community.

By getting after your farm customers with a good barn paint you can figure out a paint trade

"AS BIG AS A BARN"

By getting the farmer into the habit of painting his barns, sheds, outbuildings, and fences with

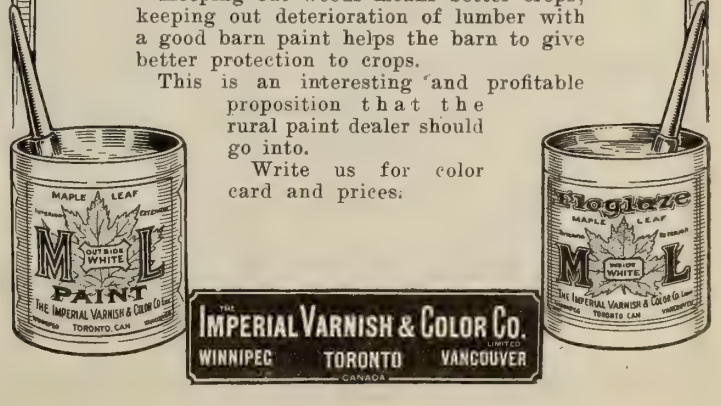
Imperial Barn and Elevator Paint

This line offers the opportunity you need for developing the farmer's trade.

SOME GOOD FARM TRADE ARGUMENTS

The price of lumber is ascending; barn paint will keep his barns, etc., in longer service.

A painted barn promotes pride in the farm.



Pride promotes better farming.

A well-kept barn means a well-kept farm, and a higher price per acre.

Keeping out weeds means better crops; keeping out deterioration of lumber with a good barn paint helps the barn to give better protection to crops.

This is an interesting and profitable proposition that the rural paint dealer should go into.

Write us for color card and prices.

The gathering of the clans

"On to Toronto!"

YOU have doubtless noted with gratification the great movement for honesty and square dealing which is revolutionizing American and Canadian business methods. Our goods, our salesmanship and our advertising are being cleansed and vitalized by the spirit of truth and sincerity.

As a result, we see a growing public confidence in manufactured products and their advertising — a confidence which, if preserved and fostered, will decrease our costs, increase our profits, and become a business asset of incalculable value.

Foremost in the fight which has brought about this revolution stand the Associated Advertising Clubs of America, whose emblem is shown above. If you are a business man, interested in the manufacture, distribution, or selling of commodities of any nature, you should attend the Tenth Annual Convention of the A. A. C. of A. at

TORONTO

June 21-25, 1914

At this Convention you will hear the inspiring story of the manner in which these tremendous reforms are being effected. More than this, you will hear the problems of distribution, merchandising, salesmanship and advertising discussed by able and successful business men, in a series of open meetings.

These meetings will cover the questions of chief interest to the 10,000 business men comprising the 140 clubs of the A. A. C. of A. —*your own* problems included.

EDWARD MOTT WOOLLEY, the famous writer on business topics, has written a booklet entitled *"The Story of Toronto."* This booklet describes in a forceful, intensely interesting manner, the wonderful work the A. A. C. of A. are doing for clean advertising and square business methods, and the significance and importance of the Toronto Convention. This booklet will be sent free to all business men asking for it on their business stationery—together with detailed facts as to the convention programme and rates for accommodations.

The R. McDougall Co., Limited
GALT, CANADA

Made $1,000,000 in Twelve Months

It is now ten years or more since Emerson first announced the slogan that made Efficiency famous, "I can show the railroads how to save a million dollars a day." For years he went from one railroad president to another, and met with an almost unanimous series of refusals and rebuffs. One railroad, and only one, appreciated his revolutionary ideas. The Santa Fe Railroad engaged him for a term of three years, and the remarkable results which he produced during those three years are still pointed to as the high-water mark of railroad efficiency.

Efficiency," as is explained by one of the Emerson school in the June MacLean's, is not *Expert Accounting;* it is not *Economy* nor *Energy* nor even *Slave Driving,* nor *System.* Efficiency in business means more *net.* Net means not how much money one takes in but how much one has left.

This series, the first of which appeared in the May MacLean's, has been obtained at a big cost for the sole aim of helping the business readers of the magazines. We came across one reader the other day, who showed us an old copy of Busy Man's, our former name, wherein an efficiency article made his business for him.

The great question in modern business success is in right action. That in a word is what the June MacLean's gives you.

Other articles of most entertaining and interesting importance are given in this issue.

Here are a few:

A Week-End at Rideau Hall.
The Ulster Leader.
Mountain Guides in the Rockies.
Boss Bowser of B. C.
Business Outlook.
28 Review of Reviews.

Send us a postcard and have your name placed on our subscription list.

Subscription $2.00 a year. *Twenty cents a copy.*

Can You Tell

how your accounts stand at closing time or do you spend hours on your books trying to find out?

Equipped With Electric Recorder

Many hardwaremen are unaware of the great advantage of using the **McCaskey Account Register System.**

With it one can keep correct tab on each account with only **one writing.**

When you give a customer his itemized bill you make a carbon copy. Each time he calls to make a purchase you bring the amount of his past account forward, including same in the total of the charge slip and filing the slip in the customer's compartment in the register. In this way you know by a glance at the register exactly how much each customer owes.

There is no possible chance of forgetting to charge. And if mistakes should occur you can make adjustment easily and without any argument or causing ill-feeling.

There are over 100,000 McCaskey Registers in use to-day.

We will be pleased to put you in touch with some users. Why not ask us to do this? Surely you will take this opportunity of profiting by the experience of others.

Write us now.

"Competition Is a Word of the Past to Peerless Agents"

That's the way Peerless dealers speak about their agency. Read what this experienced dealer says about Peerless fencing. Note his Peerless sales ran six times greater than that of other fencing. Look—

The Banwell-Hoxie Fence Co., Hamilton, Ont. Middlemiss, Ont., Jan. 8, '13.

Gentlemen:—I have been selling fence for the past seven years and in that time have represented several different firms. It gives me pleasure to say that I took the agency for your fencing for 1912 and have sold in that one year more fence than in the other six years of my business, and the best of it is I have not had one complaint in any way against Peerless fence. Different from most fences it stretches flat and all wires of even length; the lock is tight and strong and the quality of the wire is of the best. There is very little other fence used in this district and competition is a word of the past to the agent for Peerless fencing. Yours truly, J. A. McDONALD.

This is but one of many similar dealer's letters in our files. Everyone is enthusiastic about his Peerless agency. Everyone has nothing but praise for Peerless fencing—the fence that saves expense.

Peerless Poultry Fence

is made of the best Open Hearth steel fence wire—tough, elastic and springy—and will not snap or break under sudden shocks or quick atmospheric changes. Our method of galvanizing prevents rust and will not flake, peel or chip off. The joints are securely held with the "Peerless Lock" which will withstand all sudden shocks and strains, yet Peerless Poultry Fence can be erected on the most hilly and uneven ground without buckling, snapping or kinking. The heavy stay wires we use prevent sagging and require only about half as many posts as other fences.

We also build Farm and Ornamental Fencing and Gates.

Do You Want the Peerless Agency?

We still have some valuable territory open to good reliable dealers. Do you want it? Do you want to be the leading fence dealer in your locality? Then write us. Ask for our dealer's proposition now before someone else gets ahead of you.

Banwell-Hoxie Wire Fence Co., Ltd.,
Winnipeg, Man. **Hamilton, Ont.**

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

Advertisements that will get attention and hold it until you have said your say. In plate form all ready to print, or just the pictures, as you prefer. The use of these advertisements will bring new and old customers into your store.

MAGAZINE ADVERTISING

The magazines each month carry the Yale story into the homes of those whom you sell. We are making the name "Yale" a selling force for you. Nothing on your shelves is better known and more highly thought of by the trade you seek than Yale Products. Our advertising has been largely responsible for this.

ATTRACTIVE CAR CARDS

Signs for your street cars, playing up the Yale goods you sell, have a wonderful trade-pulling power. They catch the man who needs a lock, a night latch or a door closer going and coming and send him to your store. They make our *national* Yale advertising a *local* Yale advertising. We'll furnish the cards if you'll furnish the street cars.

Three other important ways in which we help you to sell more Yale Products are with Window Displays. Clever Lantern Slides, and Display Boards. Ask our Dealer's Advertising Service to send you detailed information about any or all of the above.

Canadian Yale & Towne Limited

Makers of Yale Products in Canada: Locks, Padlocks, Builders' Hardware and Door Closers.

Ottawa, Ont.

HANDY AUTOMATIC HOG WATERER

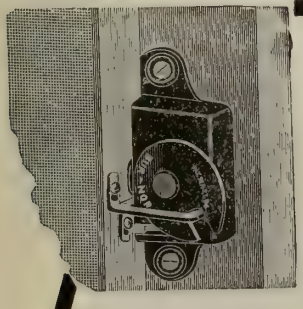
Never Leaks—Is Always Ready

Attached to tank, barrel or pipe.

Waters several hundred hogs daily.

Can be adjusted on tank or barrel without tools.

Note Simplicity of construction. Made entirely of metal.

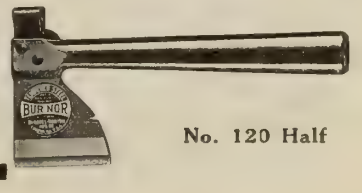


Will last a lifetime with care.

More HANDYS sold yearly than all other makes combined. ORDER A SAMPLE LOT and you will DISCOVER WHY.

NOVELTY IRON WORKS

STERLING, ILLINOIS, U.S.A.



No. 2-A Closed

Why Use Screen Doors, If They Don't Shut Tight?

Bur-Nor Catches will hold the doors shut, prevent warping and sagging. Also strengthens weak hinges. Made in two styles, Plain and with positive locking attachment. Put them on your show-case, they sell themselves.

Our Hatchet proposition will also interest you. Bur-Nor Hatchets are 50% stronger than other styles.

May we send you catalogue and prices of both?

No. 120 Half

The O-RIB-O Elbow

(MADE IN WINNIPEG)

A good elbow made of good material. It has a long curve, grooved seam, is riveted at both ends, and is perfectly round on back.

Compare it with any other make and you will say it is the best.

Your Jobber has these elbows.

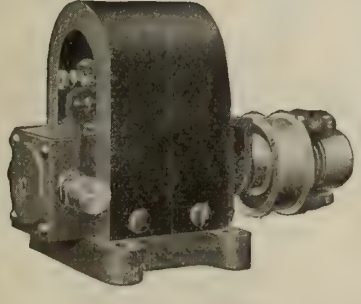
MONTREAL

FOR RE-ORDERS

"Bronzite" is a Green Paint that has a distinctive tone—a tone all of its own. It isn't just mixed or made—it's built from a permanent base, its color made fast by lasting ingredients.

BRONZITE

When painting is done with "Bronzite," the color is "grafted in"—it clings to the surface almost like powder marks burned in the skin or the tattooing on a sailor's arm. The "Bronzite" Service invariably results in re-orders.



Write for particulars.

Used on all work where a green paint is needed.

COLONIAL WORKS Inc.
225-237 Norman Avenue, BROOKLYN, N. Y.

THE LIGHT THAT'S RIGHT

Eureka Lite

Eureka Jr. B.C. 2

The fact is, with our Eureka—

You can light almost any old car as light as day,
But you can't afford to light a Ford in any other way.

LOW COST—HIGH EFFICIENCY

Used with or without storage battery. Special attachments for Ford, Maxwell and other cars. Prices $20.00 and up, according to capacity required. Large profit to dealers. Write for particulars to-day.

STANLEY

TRADE S.W. MARK

Wrought Steel

Screen Door Butts

These butts are of the same good quality that is consistent with all other "Stanley" goods.

They are supplied to the surface of the doors. By simply slipping out the pins the door is easily taken off and can be as readily rehung when necessary.

They add greatly to the appearance of any entrance, being splendidly finished in Japan, Antique Copper, Dull Brass or the anti-rust "Stanley" Sherardized; the latter finish is recommended for outdoor work or damp climates as it prevents rust.

Packed one-half dozen pairs in a box with screws. Weight per dozen with screws, No. 1751, seven pounds. No. 1753, five and one-quarter pounds.

If your jobber cannot supply you write.

See our quarter-page advertisement on page one

H&R ARMS CO

The New H & R Self-Loading Pistol Caliber 25 (6.35 M/M)

TRADE H&R ARMS CO. MARK

TRADE H&R ARMS CO. MARK

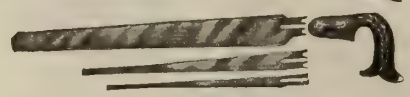
A hammerless pistol of the automatic type combining the desirable features of the various pistols now on the market and offering in the highest degree simplicity of construction, strength and reliability of mechanism, light weight and compactness.

A special circular describing this pistol, also a catalog of our complete line, will be mailed to any address on request.

Leading Hardware and Sporting Goods Jobbers can now supply. Ask your jobber for this pistol.

Harrington & Richardson Arms Company, 715 Park Avenue Worcester, Massachusetts, U.S.A.

Ross Rifle Luck



Users of "Ross" Rifles invariably comment on their good luck, because the power is such that judging of distance is scarcely necessary, so if game is **seen**, it can be **hit** and **bagged**. Dealers are wise to order early, as, despite increased facilities, it is difficult to keep up with orders.

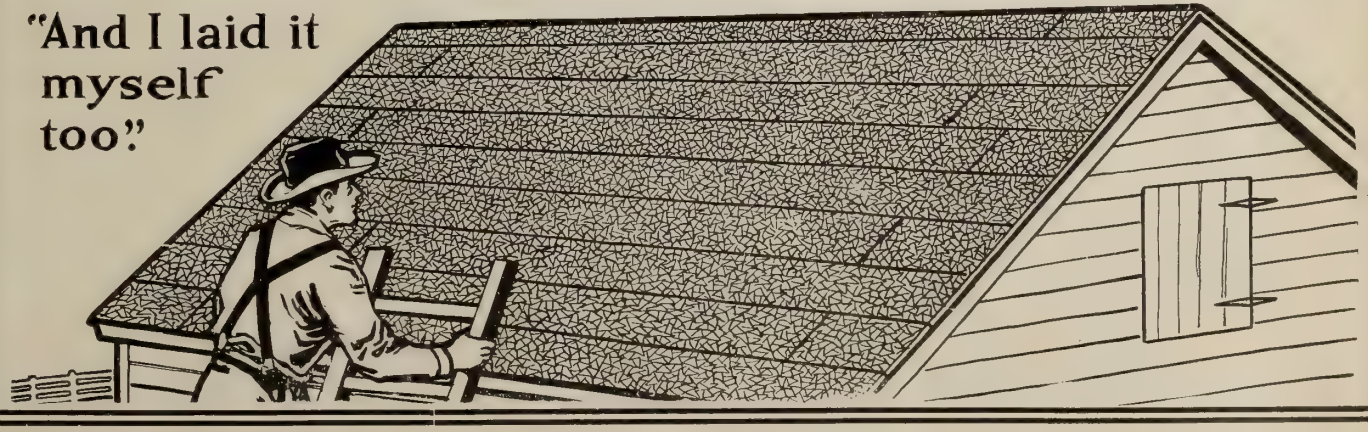
Amatite ROOFING Needs No Painting

How To Sell Amatite

Here is the argument that sells Amatite to the consumer: imagine yourself using it and see how effective it is—

"Yes, I can sell you the ordinary 'rubber' roofings, but of course you will have to paint them every two years to keep them in good order. Amatite has a mineral surface and *needs no painting*. You just lay Amatite on your roof and leave it alone. It takes care of itself.

"Amatite weighs twice as much as the other roofings and that means you get twice as much density per foot, and that means durability. Amatite is easy to lay; the nails and cement are supplied free. The price is no higher than a first-class painted roofing and you save all the cost of paint in the future.



"Amatite is made by the biggest company in the roofing business. They couldn't afford to make anything but the best."

These are the kind of arguments that sell goods. Any sensible customer will see the points as soon as the facts are presented. Sample and booklet on request to nearest office.

Yale Triplex Blocks

A "Line of Steel from Hook to Hook"

Every load-lifting problem, on the farm, in the factory, machine shop, garage, to lift your gas engine or to lift your motor boat out of the water, is solved with a Yale Triplex Block.

"Safety First" in material and workmanship justifies the Yale Triplex Block, and is behind your sales to your customers.

Fairbanks Valves

"Disc Renewed in one minute"

Will remove all valve troubles. They are built of high-grade material, to withstand a great deal more than their rated pressure. The renewable disc feature is unequalled by any valve on the market. The valve stems are packed with Palmetto Twist packing, which will remain soft and perform its function better than any other packing made.

Fairbanks Scales, Small Tools, Automatic Supplies and other mechanical lines are the best the world affords.

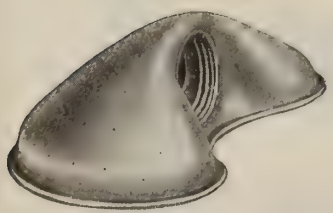
Fountain Lawn Sprinklers



THE "ORIGINAL" FOUNTAIN

THE "BABY" FOUNTAIN
It Sprinkles Square

THE FOUNTAIN
"SHOWER"
A Hose Nozzle with the "Mist-Like Spray"

THE "HALF-CIRCLE FOUNTAIN"

Practical Durable Attractive

Made of brass and handsomely finished. Nothing to rust or get out of order. **Every one of them has the beautiful "Mist-Like" Spray that has made the name "FOUNTAIN" famous from Coast to Coast.**

The **Original** Fountain is too well known to need description. It is 8 inches in diameter and is packed a half-dozen to the carton. Weight 10 lbs. to the dozen.

The **"Baby"** Fountain is now in its third year and has "made good." It sprinkles square instead of a round surface, size 5¼ inches in diameter. Packed six to the carton. Weight 5½ lbs. the dozen.

The Fountain **"Shower"** is a hose nozzle with the "Mist-Like" Spray. A splendid sprinkler for gardens and small lawns. The price is surprisingly modest. Size 2¾ inches in diameter. Packed a dozen in a carton and weighs 2 lbs. to the dozen.

The **"Half-Circle"** Fountain sprinkles only half of a full circle. No need to shut the water off to move it about. May be held in the hand like a nozzle. It is absolutely unique in design and is most pleasing in appearance. Size 4½ inches long. Packed six to the carton and weighs 4 lbs. to the dozen.

Every Sprinkler of the "Fountain Family" is packed in a beautifully lithographed display carton that not only effectively displays the sprinklers, but also explains the method of operation. These displays make the Fountain Sprinklers sell themselves.

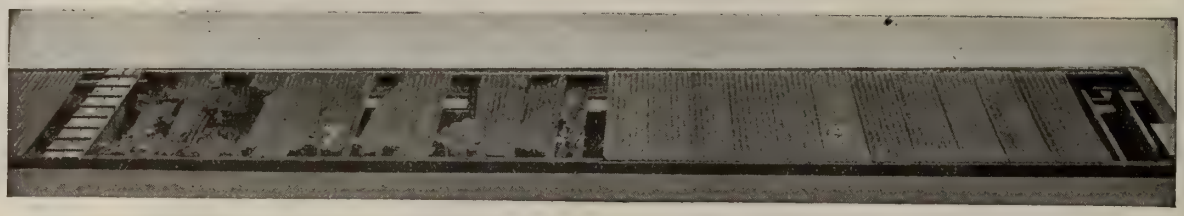
First Prize Won By a Canadian Store

A Canadian store, The Mills Hardware Co. of Hamilton, Can., won first prize in the great Starrett Show Window Contest for dressing the best window display of mechanics' fine tools. We congratulate them, but we reproduce above the prizes, which are more valuable than our congratulations. The winners, in the order of their selection by the judges, were:

Mills Hardware Co., Hamilton, Can.
Kalispell Mercantile Co., Kalispell, Mont.
Western Hardware & Supply Co., Portland, Oregon
Hazard, Gould & Co., San Diego, Cal.



Duncan & Goodell, Worcester, Mass.
Alden & Judson, Grand Rapids, Mich.
H. O. McClure, Tulsa, Okla.
I. E. Swift Co., Houghton, Mich.
The Winters Hardware Co., Fremont, Ohio.
Wm. K. Toole Co., Pawtucket, R.I.
The Bond Hardware Co., Ltd., Guelph, Can.
Adam Decker Hardware Co., St. Paul, Minn.
San Diego Hardware Co., San Diego, Cal.
Graves Hardware Co., Springfield, Mass.
Vonegut Hardware Co., Indianapolis, Ind.

The contest was judged by a committee consisting of Roy F. Soule, of "Hardware Age"; James H. Kennedy, from "Hardware Dealers' Magazine"; D. F. Barber, from the New England Retail Hardware Dealers' Association; Hugh H. Riner, from the National Hardware Dealers' Association, and David E. Speare, Jr., chief decorator of Filene's department store, Boston.

Next week we will show the window that won the prize.

OVER 50,000,000 FILES A YEAR

Pretty nearly every male-man, at some stage or other, has made sport of the "shopping proclivities of women."

Sometimes, I guess, it is a joke, but for us men who are in the merchandising business, it's a cold, hard fact.

A woman is a better shopper than a man. She gets more value for her money, sometimes just because she has a peculiar mental slant in that direction: sometimes because she has only a certain amount of money to spend and has to spread it out as thin as butter on a pic-nic sandwich.

Anyway, the ordinary woman is a sticker for getting her money's worth. That's a fact that we might as well recognize, because in nine stores out of ten it's the women that keep the bell ringing on the cash register.

The ordinary woman is not a mean buyer: she's a keen buyer.

If she thinks that by spending a few cents more to-day she can save a dollar next month, she recognizes the logic of that all right.

Flour is cheaper by the bag than by the pound; so she orders a bag.

If when the rather important matter of stove-buying comes up, you tell her that the Gurney-Oxford will last her a lifetime, she'll see the point.

If you tell her it will save one ton of coal in every six, as against a cheaper, poorly made stove, that point will stick in her mind.

If you demonstrate the Economizer, she will readily appreciate its money-and-time-saving qualities.

You merchants who handle the Gurney-Oxford should never lose a stove sale. It fairly bristles with selling points. The next time a "shopper" comes in and asks "to look at some stoves," start right in and **sell** her a "Gurney-Oxford." You can do it nine times out of ten, or my name is not

9 RUNAWAY BARGES SEND 156 CRAFT ADRIFT AND SINK 7

Boats Break Loose from Tow and Sweep Yacht Anchorages.

HAVOC ALONG SHORE OF THE HUDSON RIVER

Three Houseboats, with Families on Board, Among Those Struck and Damaged.

Nine runaway barges, laden with sand, gravel and other building material, swept through the numerous fleet of yachts, motor boats, launches and other small craft moored in the Hudson River between 137th and 170th streets yesterday morning, sinking at least seven of them and sending 156 adrift, many of them damaged.

All day the owners of the craft and the harbor police were busy searching for the drifting vessels, many of them being found as far south as 100th street.

A sudden squall out of the northwest at two o'clock yesterday morning parted the hawsers by which two tugs of the Cornell Towing Company were towing nine laden barges down the river against a rising tide. The nine barges, which had been lashed together, parted, two of them being blown inshore at 138th street, while the tugs caught the other seven, towed them inside of the cove at Fort Washington Point, opposite 176th street, and anchored them while they put out to stop the other two barges.

But these two barges were blown swiftly into the moorings of the Colonial Yacht Club, at 138th street, and with such force that three motor boats were sunk, forty more small craft were stripped from their moorings and the landing stage was smashed. The freed vessels started down stream. Their cabins had been crushed in by the barges, their sides scraped and their seams sprung in many instances.

The wrecking of the landing stage awa

The news story opposite goes to show how much damage may result from the parting of a rope. Viewed in this light, every poor or overstrained rope is a public menace.

A man's responsibility does not end with himself—it embraces everybody whom his dealings or actions may affect.

You, as a dealer, can do much to fulfill your responsibility by selling only Plymouth Rope, which is reliable, and by educating buyers to purchase new rope oftener.

Both these courses are also profitable—in money and good-will alike.

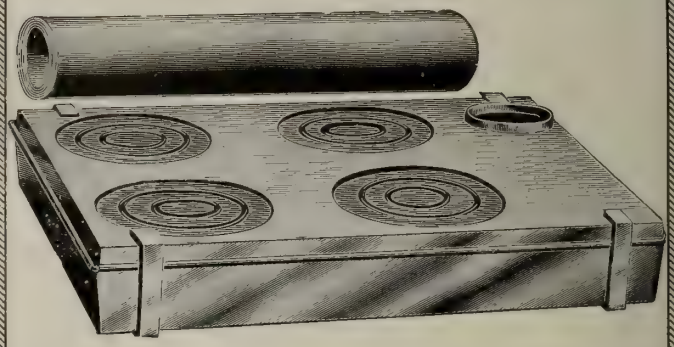
Summer Time is Camp Stove Time



The time is fast approaching when thousands of Canadians will be "camping out." And meanwhile arrangements are going forward with a swing. Two things receive first consideration—carrying convenience and elimination of all unnecessary weight. These two vital points are specially dealt with in

McClary's

"TESLIN" Camp Cook Stove

The two cuts illustrate the "working size" and the "carrying size"—note the exceptional difference.

When set up the heavy angled corners and the method of construction keep it perfectly rigid. Works like an ordinary cook stove—the draft forces the heat all round the oven; also has a direct draft when baking not required—four 8¼" pot holes on top—five lengths of telescopic pipe, full length 9½ feet.

Now is the time to guarantee quick returns — write to-day for more particulars.

There are many features

which have been embodied in the construction of

The BANNER Furnace

which we claim are distinctively superior to nearly all other makes of furnaces. For instance we have a solid cast iron **Combustion Chamber.** There can be no question about the advantage of a cast iron dome over one made of steel. It is more durable, will remain hot and radiate heat long after a steel dome has cooled. It is **corrugated,** thus securing greater radiating surface and allowing for free expansion and contraction.

Just a few of the other leading features:—

Large, roomy ash-pit fitted with an ash-pan.

Four triangular grate bars.

The Direct Draft Damper, which is fitted with an Automatic Gas Damper. Flanged Fire Pots. Made in 5 sizes.

Our catalog contains full particulars. We'll send it upon receipt of a card. Write!

BOSS OVEN

GLASS DOOR

GUARANTEED

No. 750

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.

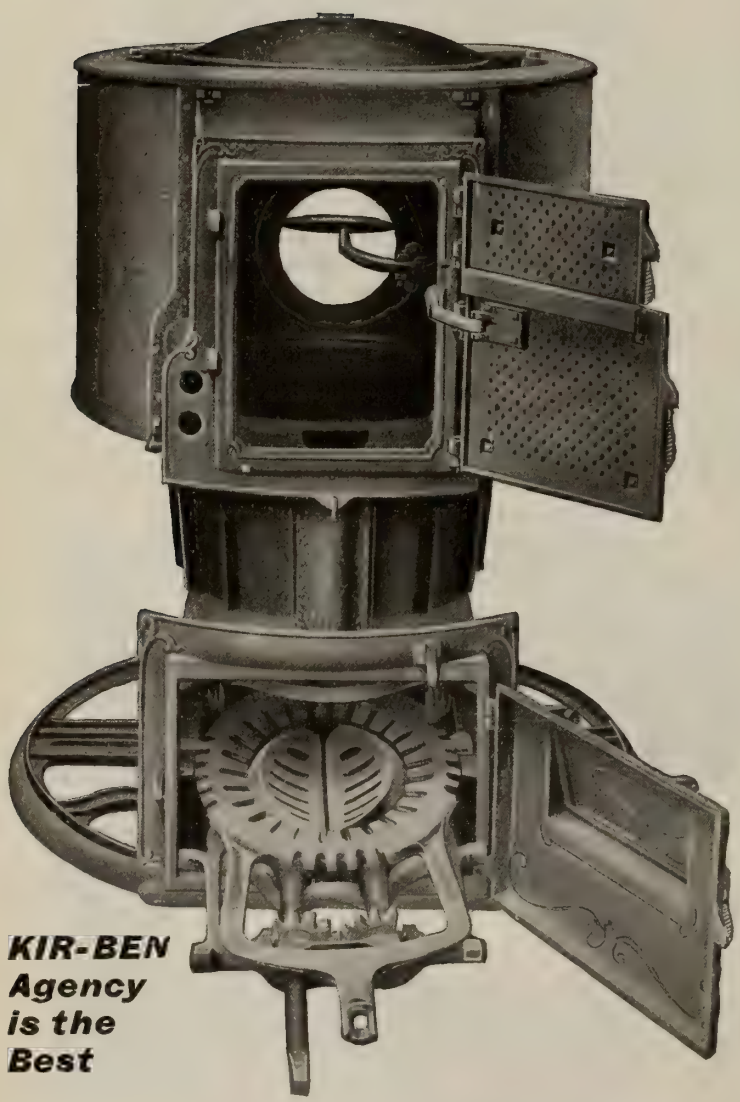
NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.



FOUR BURNER LOW WITH GLASS TANK

The HUENEFELD CO., 6000 Valley St., Cincinnati, Ohio

KIR-BEN

KIR-BEN

KIR-BEN—

KIR-BEN Agency is the Best

Furnaces with this name on give maximum satisfaction everywhere.

They are built to give long service and to give it economically, and with but little attention.

When you handle Kir-Ben furnaces you are not merely hoping for larger trade—you can rest assured that it will come in short time.

A Kir-Ben user is always a Kir-Ben booster—he sends his friends to you when they want a real good furnace.

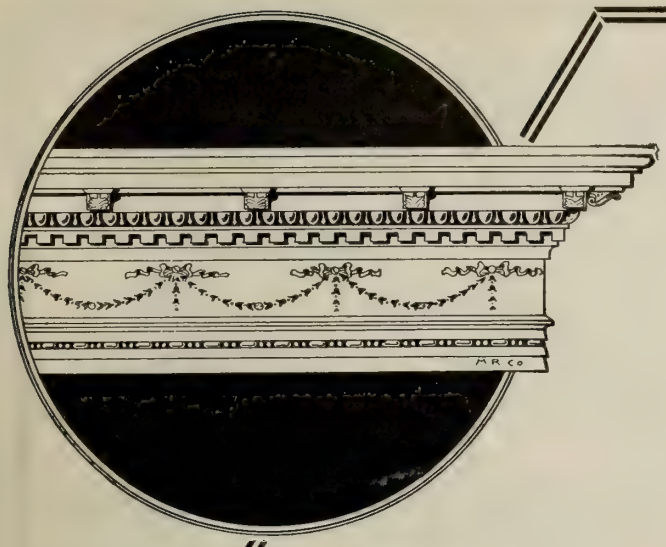
Kir-Ben patterns are made of aluminum in match plate styles, and every one of these furnaces will result in a perfect fit, true to weight, and free from strain. These patterns make the setting up of furnaces an easy matter, as every part fits perfectly.

Castings are made of pure pig iron. No scrap iron of any kind is used. Quality is tested daily, and nothing better can be made.

In making the radiator we use Apollo Keystone COPPER - BEARING Steel Sheets, because in their construction a percentage of pure copper has been added, to prolong the life of the sheets. These steel sheets resist to the greatest possible extent all corrosion influences, and will not rust.

Illustration shows sectional view of Kir-Ben 1914 Furnace.

Note the **New Style Duplex Grates,** the **Large Feed Doors,** the **Automatic Damper Control,** the **Water Coil Openings,** the **Heavy Base and Bottom,** the **Straight Fire-Pot with Heavy Flanges,** the **Large Ash Door,** etc. All these features have a distinct advantage in the furnace world—and the **Kir-Ben Catalog** describes them fully.



A word from you and this catalog is yours. Better write now while you're thinking of it.

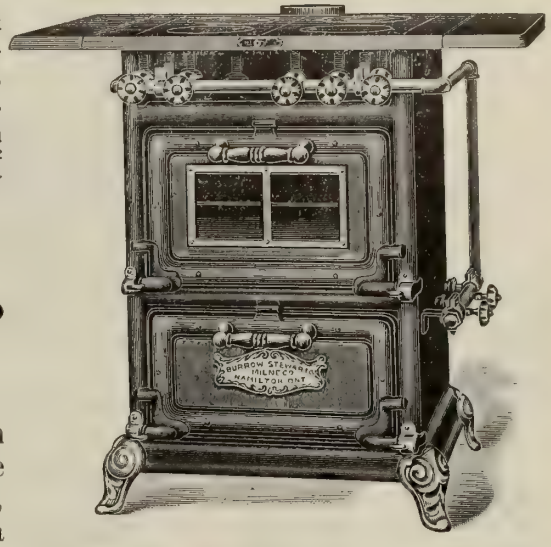
AS EACH ONE IS MADE SCIENTIFICALLY EXACT & THOROUGHLY TESTED BEFORE BEING SENT OUT.

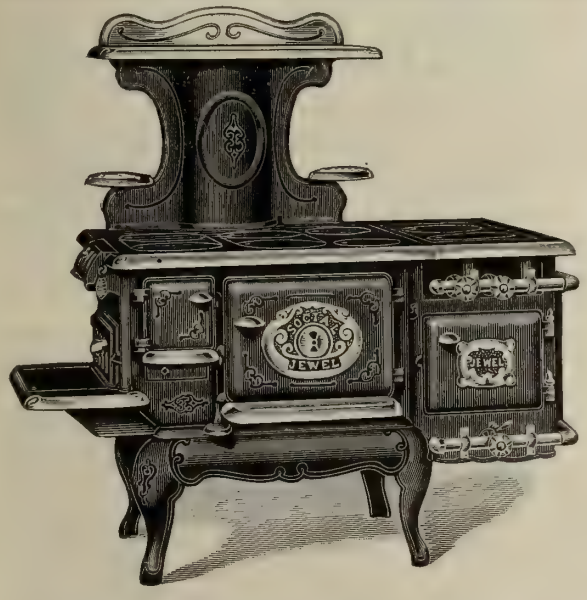


MANUFACTURED BY WILLIAM NEWMAN & SONS LTD. BIRMINGHAM.

Canadian Agents: F. D. C. Richards, 70 Lombard Street, Toronto. Tees & Persse, Calgary, Alta.

"HAMILTON JEWEL" Gas Ranges

Are equipped with Adjustable, Non-Leaking, Needle-Point Valves — They can be adjusted in a moment to burn any kind of gas—AT ANY PRESSURE.



Do You Realize What This Means?

It means primarily ECONOMY OF GAS in the greatest possible degree.

Why? **First,** because the **Adjusting Nut** on the valve (shown separately in above cut) controls the flow of gas. Then, the valve being **horizontal,** secures a **perfect mixture** of gas and air; the gas is delivered from the point of the needle into the air chamber, where gas and air are thoroughly mixed; this insures a perfect **Blue Flame, consuming the maximum amount of air and the minimum of gas. Result**—not only greater heat, but **LOWER GAS BILLS.**

THEN AGAIN, the horizontal needle valve, unlike the vertical lever valve, **has no seat, spring or screw,** which are liable to wear, work loose and eventually leak. They will last as long as the gas range, and for exact mechanical construction, are **absolutely guaranteed** to be perfect in every detail.

VARIETIES TO SUIT EVERY PURPOSE

THE SOCIAL JEWEL
WITH GAS EXTENSION

Burns Hard or Soft Coal or Wood—Manufactured or Natural Gas.

MADE IN TWO SIZES—16 and 18 in. ovens.

Independent Gas Oven measures 11½x18x9 ins.

A COMPACT, ECONOMICAL, BEAUTIFULLY DESIGNED RANGE and ABSOLUTELY GUARANTEED.

Sandusky Power or Electric Washer

Here is a thoroughly practical Washer, one that will do a family washing right at home, under sanitary conditions and save from $1.00 to $3.00 each week, enough to pay for it in a short time.

Every Dealer who has stocked it has found it exactly as represented—first-class in every respect and a splendid seller.

Every woman is captivated by the way it starts automatically and by the perfect condition of the clothes and their snow-white cleanness after washing. You will find it

A Trade-Bringer

worth handling, because every woman who gets one recommends it and sends more customers to you.

One big selling point which takes with prospective buyers is the novel wringer device. It permits wringer to be started, stopped, reversed or swung to any position. And while the washing is going on, the wringer will wring from the rinse water to the bluing and from the bluing right into the basket. The construction of the entire Washer is the best possible.

Space won't permit full details, but if you'll write we send them and tell you about our Guarantee Certificate plan which helps you make quick sales. Our proposition is worth sending for. Don't neglect it.

The One Minute Washer Co.

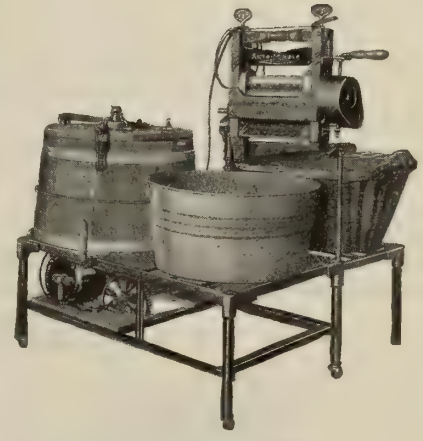
AUTOMATIC POWER AND ELECTRIC WASHERS

Buy Them In Canada

Automatic Power Washer.

Automatic Electric Washer.

Here is a line of Washing Machines that will enable the dealer who handles them to absolutely control the power and electric washer trade of his vicinity. No other machine can entice his trade away, but he will be constantly getting new business and making fast friends through the AUTOMATIC.



The Automatic is made in two styles—the single tub machine and the bench type. Both styles are made for power or electricity. For those who have engines but no electric current, the power machine serves every purpose. For those who have current, the electric machine is what they need.

In a short time the women will all be exempted from the hard work of washing by hand. The work will be done by power of some kind. The movement is on now and the dealer should be ready.

BUY THE AUTOMATIC. YOU WILL NEVER NEED CHANGE.

Best mechanical principles, materials, workmanship, most convenient, safe and easy machine on the market. Very simple, very efficient. Will last for many years.

Complete information on washing machines given in a special 32-page colored book, known as Bulletin 107. Ask for it. It is free.

Let us tell you the reason,

that you should stock up with the Dana Peerless Freezer, **right now.**

The Peerless makes its greatest appeal in Summer. Although it's in demand all the year round—naturally, in the sultry months, the demand is greatest.

And the Peerless appeals irresistibly to those people — the Summer campers, the commuters who go to live, far from the stores, where good ice-cream is procurable.

If you have it in stock, good and early, you'll be able to show it to them before they go,—you'll have time to demonstrate it—to point out the tall, slender can—to show them how the dasher removes the cream from the sides as fast as it becomes solid. You will be able to let them crank it themselves, to let them discover that it is as easy to grind as a watch is to wind.

That's the reason you should stock the Dana Peerless **now.**

A mighty good reason, isn't it?

You'll think so, when we tell you about the profits.

So ask your wholesale hardware supply house about them now.

UNIVERSAL

Quality is indeed worth while in Bathroom Fixtures. Few articles show its absence so readily and few depend so much on quality for their sale.

"Universal" Bathroom Fixtures

have that apparent quality which stamps them at once as distinctive and desirable. The prospective purchaser notes immediately their strong and massive construction; their high-polished, heavy nickel-plate finish; their practical features that make them really useful, and their simplicity that makes them easily cleaned and polished.

Tumbler Holder

Above all, their style is attractive; their designs are really graceful and artistic, while their finish is certainly handsome. In fact, they convey that idea of refinement that is most looked for by the buyer of Bathroom Fixtures.

Tumbler Holder

The line contains all of the useful appointments, singly and in combinations, made in different attractive patterns so that a customer can choose a pattern that appeals to his taste and fit out his bathroom to harmonize with it.

Combination Glass Shelf, Tumbler Holder and Soap Dish.

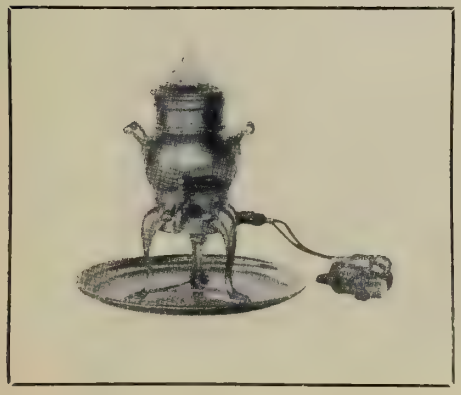
A Merchant's Experience with Electrical Devices

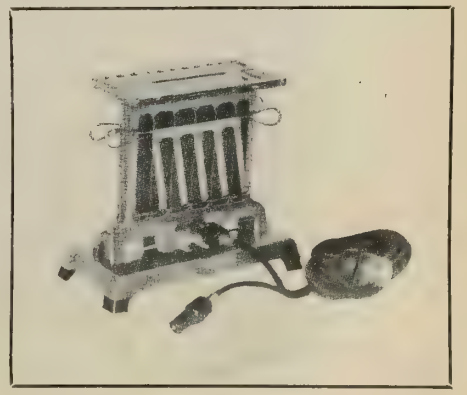
Manager of a Large Retail Hardware Store and a Retired Merchant Discuss the Electrical Appliance Line—Many Changes During Recent Years—A Good Line to Sell.

By David G George

"WE have just been making comparisons," said the manager of a prosperous Ontario retail hardware store, referring to a conversation he was having with a former proprietor who retired from active business a few years ago. Mr. Crawford, the former proprietor, and the older man of the two, had passed some remark regarding a large number of packages of electrical appliances which were being opened in the receiving room, and asked the manager the reason why a consignment of electrical goods was arriving at this time of the year. The manager replied that the goods were to be featured for the June wedding trade. "We expect," said the manager, "that during June we will have a bigger demand for electrical appliances than we have ever had in a corresponding period during any previous year. Electrical appliances, you know, are now considered very appropriate as wedding gifts, in fact, very few brides consider that the wedding present list is complete unless one or two electrical appliances are included."



The older man then commenced to tell about the wedding present trade of the olden days. "About the only line we had a demand for was carving sets. There may have been a few sales of cutlery, such as table knives and forks, etc., but we did not attempt to feature wedding present goods, because we thought it was a line of business for the jeweler to look after. I have noticed during recent years that hardwaremen feature silverware, brass goods, cut glass, table cutlery, etc., but I did not know that electrical goods were featured to any great extent. Have you met with success in selling this line?" "Yes," replied the manager, "we have met with splendid success since we started to sell electrical goods. You know, it is only during recent years, perhaps the last five or six, that electrical appliances for the home have become popular. It is unnecessary for me to dwell for any length of time on the convenience and economy of good electrical appliances. There are still some people who are afraid of getting shocks, etc., but after we have sold them an iron or a toaster or some other appliance they soon realize the value and economy of the appliances and in many cases they are not satisfied until they have purchased six or seven electrical appliances for use in the home. We always like to sell an electrical appliance, as a wedding gift, because we know that if we keep in touch with the recipient of the gift and keep her informed, by personal contact, letter or circular, of the new appliances which we place in stock from time to time, that we will make future sales.



Electric Washer.

"When a young couple 'starts up house,' it means that they will need many articles from the hardware store. If we can show them by selling some of the wedding gifts they receive, that their friends deal with us, the chances are that we will secure a large share of their future patronage. Some men are inclined to scoff at follow-up systems, but not me. I believe in the follow-up system every time—it pays.

"Coming back to electrical appliances, the devices which have been produced by some manufacturers are marvels of ingenuity. We have customers who would give us unlimited references on some of the lines we have sold them. We always endeavor to secure lines which we feel sure will give satisfaction and can be guaranteed. We seldom have any trouble. Occasionally a heating element will prove defective, but we always make it a point to replace them if they have not been in use too long, and if it appears to us that the user has not been negligent. You know it is a pleasure to sell electrical devices if you know them to be reliable.

Electric Percolator.

Electric Toaster.

"There is something magnetic about the word 'electricity.' You tell a lady customer that the washing machine, vacuum cleaner, water heater or toaster is operated by electricity, and you gain her attention immediately. And the finish of the goods—just take a look at that line of samples. You see a sample of an electric chafing dish, coffee percolator, tea samovar, toaster, disk stove, water heater, luminous radiator, and three sizes of irons. On the other side, we have samples of three makes of vacuum cleaners, and one combination electric washer and wringer. Can you tell me of a line of samples that would present a better appearance or more quickly secure the attention and interest of a lady customer? Advertise! Yes, we use the show windows, the newspapers, circulars, personal letters, and also show and demonstrate the various devices to our customers in the store. The line carries a nice profit. We often make $2 on an iron, and our profits range from that figure to $40 on our high-priced vacuum cleaners. I would hate to think of discontinuing our electrical department. We are building up a splendid trade in this line. We did not carry a heavy stock at first; in fact, our first order consisted of three irons and three toasters, but I can tell you we have sold some since that first order was placed. The most successful way that I know of to sell electrical devices is to let the people know you have the goods, and what the goods will do. If you place the devices on the shelves and wait for customers to come in and ask for them the chances are that the returns in sales will not be large. We sell electrical devices all the year round, and also have a big demand at Christmas; but watch us try to boost our sales during June this year. I'll guarantee that a good many of the wedding presents purchased in this city next month will be purchased in our electrical goods department."

"Yes," said the retired merchant, "I suppose that in these days of keen competition the methods I employed thirty years ago would not bring in the necessary business and profits. Times have changed, cost of doing business is higher, competition is keener, and I suppose you have to keep your eyes open for new lines. It looks to me as if this line should be a nice one to handle, and one that would bring a very reasonable profit. You can't rely on wire nail and barb wire profits for your existence these days, can you?"

Successfully Operating a Motor Delivery

By F. Max Hill, of Jas. Walker Hardware Co., Montreal, Que.

"ONE of the essential points in the successful operation of a motor delivery is to have a weekly inspection of the motor and running gear. To that rule of a regular inspection by a qualified expert I attribute more than anything else the success we have had with out motor truck.

"We have a one-and-a-half ton truck, which has been in service practically every working day in the past year. Even during the winter months, when the snow was fairly deep, we had little difficulty in keeping the car in service. During the entire year the car was not out of commission more than seven days. Most of that time was on account of one big snowstorm which stalled the car in the garage. Our garage is situated several miles from the store, on a side street, where there is very little traffic. One morning, following a particularly heavy fall of snow, the chauffeur tried for a couple of hours to drive the car through the drifts. He had only a short distance to go to get to one of the main streets where the snow was packed but after trying vainly for some time and finding he made little headway he telephoned to the office and I told him to back the car into the garage and come down to the store himself.

"That was really the only time during the whole winter when we could not use the car. If we had had our garage on one of the main streets we would not have been deprived of it at all, as these streets are quickly packed down, or the snow is cleared away, and the motors can run as well on them throughout the winter as they can in summer.

"We determined, when we bought this car to give the service a thorough tryout, and to see if it was any advantage over the horse driven vehicles. I may say that now after a year's trial I am absolutely convinced of its efficiency and value. The cost of upkeep is about the same as for two single horse-drawn vehicles that formerly did the work.

"It formerly took two horses and wagons to cover what we call the western district—that is the half of the city lying west of St. Lawrence Boulevard, and taking in Montreal West, Notre Dame de Grace and Westmount. The motor is now taking care of that district and also makes trips several times a week to such suburban places as Cartierville, and St. Lambert, across the river. It carries larger loads and does the work more quickly than the horses could do it.

"It is worth noting that our car is so regulated that it cannot exceed 15 miles an hour. We figure that that is the limit of the speed in order not to strain the efficiency of the car, and we have a regulator which prevents it going faster than that speed. While our truck has a capacity of one and a half tons, it is possible to put a 25 to 33 1-3 per cent. overload on it, but we seldom do so. Overloading is not advisable as it is apt to strain the truck and impair its efficiency.

"It is a difficult matter to make a correct comparision of the cost of motor deliveries and horse drown vehicles, but I believe there is very little difference. An expert chauffeur naturally costs more than an ordinary teamster, but in our case one chauffeur is taking the place of two teamsters. We have had two complete sets of tires and some minor repairs which would probably total about $175 for the year. The upkeep of horses and wagons, shoeing of horses and repairs to wagons, would amount to fully that much. We had one extraordinary expenditure, which I do not think should be counted in against the motor. This was due to an accident, caused by a hanging telephone wire on one of the streets in the west end. The street was torn up at the time and the chauffeur in attempting to pass around the obstruction was struck by the wire and himself injured and the top of the cab damaged. The cost of this was about $45, but a horse and wagon might have had the same misfortune.

"Our experience with the western delivery service has been so satisfactory that we have decided to purchase a car to take the place of the two teams which have been covering the eastern section of the city. We will thus be doing with two motors the work of four horses and wagons and I believe will do it more cheaply and more efficiently than with the horses.

"With regard to our weekly inspection, which I have said is one of the essential points, and to which I attribute a large part of the success we have had. We send our motor, every Thursday afternoon to the agents, where it is given a rigid inspection. If any of the parts need cleaning, or a nut or bolt

(Continued on page 60.)

Methods of Showing Wedding Gifts in Store

Hardware and Metal Representative Visits the Cutlery and Silverware Department of the J. H. Ashdown Co., Winnipeg—Wall Cases, Silent Salesmen, Tables, Etc., Are Used — An Abundance of Light.

JUNE and September vie with one another as wedding months. June is popularly known as a month for marriages; but the Ashdown Hardware Co., Winnipeg, probably do more business with September brides than with those who unite in June. The weather in Manitoba is no doubt the cause. It is more propitious to dresses in the later month.

However, Ashdowns care not whether a girl becomes a bride in September or in June; they give just the same attention to wedding presents in one month as in the other. Their silverware department is one of the finest to be found in a hardware store in Canada.

An idea of the elaborate methods of displaying these goods will not be amiss, considering that June is so near. There are nine glass silent salesmen, used as counters. Behind these are massive wallcases, with sliding doors. These contain, on shelves, small expensive clocks, picture frames, candlesticks, match-holders, tobacco jars, calendars, ash trays, writing desk outfits, blotters, ink wells, etc.

Lay-out of Store.

To the right on entering, the first wall-case is filled entirely with silver-plate tea sets of Canadian, English, and American manufacture. The next case contains salad bowls, trays, prize cups, all being silverplated goods. These wall-cases stand ten feet high, are finished in mahogany.

The centre portion of the wall-case on the right takes the form of an alcove, giving a graceful appearance to the department. The top is given an artistic appearance by the use of artificial palms and art pieces, consisting of bronze figures, urns and vases, all arranged with considerable taste. The dark finish of the cases shows out the light silver and cut glass to advantage.

The above mentioned alcove is devoted entirely to cut glass ware, of which, aided by mirrors at the back and concealed electric lights, there is a brilliant display. The shelves in the alcove vary in thickness, thus tapering off the intensity of brilliance. The bottom shelf is of considerable width, and is below the level of the counter, the ware being displayed on white cloth densely, giving the customer something of great brilliance to gave upon.

Cut Glass Display.

The principal pieces of cut glass ware shown are cut glass lamps and $100 punch bowls. Other pieces of less value are epergnes, water jugs, nut bowls, ice cream trays, fern pots, decanters, vases, sandwich trays, butter plates, perfume bottles, jewel boxes, and cold meat trays. They feature colonial and other patterns of cut glass.

Cut glass is a very popular article just now as a wedding gift. Every lady likes to have as much of it as possible in her home.

Considerable care is taken in the choice of suitable wedding presents for

Interior view of cutlery department in the Winnipeg store of the J. H. Ashdown Co.

the silent salesmen. One case is devoted to soup toureens, casseroles, pudding dishes, and entree dishes. The next case contains pearl handle knives and forks entirely, dessert and table size, with combination cases of knives and forks and fish knives and forks. Another case contains only chafing dishes and coffee percolators. A massive display is made in four rows, prices ranging from $4 to $50.

Another silent salesman contains principally samples of silverplate knives, forks, and spoons. Another case is devoted to leather goods, such as ticket cases, pocketbooks, wallets. Next to this is a case of solid silver hollow ware, comprising tea sets, fruit dishes, bon-bons, candlesticks, vases, cruets, sugar and creams, photograph frames, butterdishes, five o'clock tea sets, cake baskets, etc.

There is also a case of jewelry, of large assortment, including solid gold and gold-filled cuff links, watches, tie pins, rings, bracelets, sunbursts, necklets, diamond rings, and fancy rings with precious stones. The next case contains sterling silver flat ware, knives and forks, spoons, fancy pieces, cream and gravy ladles, and ice cream servers. There is a case of traveling cases, and all toilet articles required in traveling. There is also a case for silverplated fancy flat ware in cases, such as half-dozen salad forks, oyster forks, bouillon spoons, dessert knives.

Display Tables.

So much for the silent salesmen. Displays are also secured by the use of tables in the centre of the aisle. These are covered with red plush, and a raised centre is decorated with artificial palms and terra-cotta figures. On one table the display consists principally of brass goods, such as ash trays, tobacco jars, cigar lighters, card markers, card cases, ink wells, pen racks, letter openers, calendars. Underneath the tables are displayed brass jardinieres and fern pots.

Another display table contains more brass goods, desk clocks, and manicure sets. Two whole tables are used for displaying gilt jewel boxes and gilt clocks.

The feature of the cabinets of silver is that they contain everything for the proper lay-out of a table, and are very attractive for presentation purposes. One of the chief methods adopted by this firm in securing this class of business is in displaying the goods suited for the season. Now that June has arrived, the whole department has been changed around so as to give special prominence to goods suitable for the large number of brides who make their appearance at this time of the year.

Rarely are prices cut, as goods of this nature which do not sell during one season will sell at another. It is a department in which reduced prices are almost a detriment to the business. People often think that a silver article which is reduced in price has less silver than it ought to have. Every effort is made to display as many of the goods as possible, and to ticket everything in the windows.

Canadian Credit Men Hold Annual Meeting

Fire Protection and Insurance the Chief Questions Discussed — New Officers Elected, With R. R. Wilson, a Wholesale Grocer, as President.

Winnipeg, May 27—(Special).— The annual dinner of the Canadian Credit Men's Association, Winnipeg, was held in the Fort Garry Hotel on Thursday night last. Fire protection and insurance were the subjects under discussion, and some lively exchanges of opinion took place. Fire Commissioner Lindbach presented a statement showing the appalling fire waste in North America, and emphasized the importance of individual responsibility.

After the discussion, the annual meeting was held, at which the following officers for the current year were elected: President, R. R. Wilson, of Campbell Bros. & Wilson; vice-president, J. D. Burnham, of Stobarts, Limited, Henry Detchon was re-appointed general manager, secretary and treasurer.

The following four members of the board retain their seats for another year:—W. S. Fallis, The Sherwin Williams Co., of Canada; R. R. Wilson, Campbell Bros. & Wilson; W. S. Arnold, Gowans, Kent Western, Limited; J. W. Campbell, John W. Peck & Co., Limited. The following five were appointed to take the place of the retiring members: G. M. McBride, J. D. Burnham, Theo. E. Howard, S. E. Diamond, W. L. Helliwell.

Top row from left to right:—T. D'Arcy McGee, Thos. Ryan Co.; J. D. Burnham, Stobarts, Ltd., Vice-President; John W. Campbell, John W. Peck & Co.

Second row:—Henry Detchon, General Manager; J. Taylor Webb, Dom. Storage & Forwarding Co.; J. G. McIntosh, Robinson, Little & Co., Wood-Vallance, Ltd.

Third row:—S. E. Diamond, Ames-Holden, McCready, Ltd.; W. S. Arnold, Gowans Kent, Western, Ltd.; W. S. Fallis, Sherwin-Williams Company; R. R. Wilson, President, Campbell Bros. & Wilson.

Bottom row:—Theo. E. Howard, Gaults, Ltd.; G. M. McBride, Wood-Vallance, Ltd.

Photograph showing members of last year's Board of Directors of the Canadian Credit Men's Association, Winnipeg. These were re-elected, with the exception of J. Taylor Webb, J. G. McIntosh, and T. D. McGee. R. R. Wilson, of Campbell Bros. & Wilson, wholesale grocers, is the new president, and J. D. Burnham, of Stobarts, Ltd., vice-president. Members of the new board not in this picture are W. L. Helliwell, Gurney North-West Foundry Co., Ltd., and six others representing the outside provinces.

Recollections of a Hardware June

Being the Reminiscences of an Old Hardware Dealer and Dealing With the Application of Some Good Advertising and Window Dressing Ideas to the Sale of Kitchen Ware to Brides.

By The Old Dealer

THE best merchant I ever knew? Son, you're asking me a sticker. I've known all kinds in my time, from those that hadn't sense enough to know the difference between being courteous and just plain fresh to a customer, to those who have become the grand old men of the trade. Naturally, a man might be good in one line and fall down completely in another."

"There was my old friend Charlie. I'll not mention his full name, for today he is sales manager of one of the largest corporations in America, and might not like some of my remarks. The biggest and the best of us are human, you know, and like to face our faults alone.

"Well, Charlie was really the poorest buyer I ever saw. I know, because I worked for him at the time. Did not seem to have executive ability either. But as a salesman he was a wonder. Not in the actual execution; he left that to others. But ideas! Man alive, he was brimming over with them. Met them on every hand. Could not talk to a man nor read a newspaper without hearing or seeing something that would start a train of hardware ideas cho-choing through his head. If he had been an old-clothes man he would have thought old clothes. An idea in his head became a thing of life and did everything but talk. And while it possessed him that fellow worked, ate and slept with his idea. But as soon as he had extracted the meat from it, he tossed it aside like a discarded love, and went about with an unhappy look on his face until he had found another to fill his heart. And enthusiasm? Why, that fellow dripped it off in chunks so that the whole atmosphere about him was surcharged with it. And versatile? Heavens! His mind was as versatile as a chameleon's hide.

"He was a wonder in more ways than one. Always courteous to high or low, thoughtful of others and invariably there with a whole-souled smile and a pleasant word.

"He made it a point to know everyone, and when the bug bit him, he was after all his acquaintance in the endeavor to get food for the beast. If he had not been so well known, or if the town had been a larger one, he might have been arrested for soliciting.

"All was fish that came to his net. He could ravish a nigger newsboy of an idea as readily as he would listen to the advice of the manager of the bank that he did business with. And he made them all work for him without their realizing it. He always claimed that if a man would only listen to other people's ideas of his own business, he could not help but winnow considerable grain out of the chaff, not only because of the bulk of it, but through getting the new and sometimes original viewpoints of out-siders. Further, he claimed that if you would only let a man give you advice about your own business, he would go away from you suffused with a warm sense of benevolence to you and hence forward take a personal interest in you and your business.

"Charlie was a salesman if ever there was one.

"He became a walking encyclopedia of hardware facts, just through observing, questioning and reading.

"No detail was too small for him to follow up with the painstaking care of genius; which he insisted—did not come in the night from Heaven, but as the result of a long, hard and careful grind at one's chosen work. 'It's the day of small things,' he used to say.

"He played the women and children strong and featured household articles and children's stuff more frequently than the other dealers on that account. He maintained, with considerable truth, I do believe, that it is they who steer a family's shopping. He worked hand in hand with the women's clubs for that

Wedding Gift Display by Guelph Hardware Firm.

reason. High brow—or low brow—it was all the same whether they were reading Browning or cleaning up alleys and painting fences; he was 'Johnny on the spot.'

"All this brings to mind the spectacular campaign we waged under his direction one June for the trade of the brides and those who might be giving kitchen showers for their benefit.

"He came down to the store one morning grinning like a Cheshire cat and we knew he'd had another visitation. He did not keep our curiosity in suspense, nor allow his own enthusiasm to cool. 'Strike while the iron is hot,' was ever his motto. 'Manana'* was not in his vocabulary. He outlined his campaign and wound up with, 'Now, boys, remember that a bride is so full of money, her family's, her friends' and her future husband's that she rattles when she walks.'

"That was Charley's way. Made us take a keen personal interest in his stunts.

"We got busy at once. Each man had a different department, and Charley supervised them all. I had the window for mine.

"One man went over the county records and listed all recent marriages. Looked over old newspaper files for announcements of engagements and followed up every available channel of information on recent or future weddings.

All those couples were written personal letters by Charley himself, along the lines his knowledge of them would indicate as best, whether gleaned from personal contact, or Bradstreets. He even made a series of speeches at a woman's club on 'Furnishing the Home,' and made some rattling good talks that got good notices. He circularized all the women's clubs of course, with catchy stuff, and got in right with the ministers who could tip him off as to prospective weddings.

"Our newspaper advertising during that period was full of references to brides and roses, and soforth. The daintiness of our things was featured strong. We had a good ad writer whose stuff would make a young girl believe that she would rather have a nice, dainty kitchen utensil than something in her room. He ran it under catchy headlines such as 'Hardware and Hearts,' pointing out that the practical must not be neglected for the ornamental in the new home, which must serve as a real home and not as a museum for pretty fol de rols. One very good thing he got out was called 'The Bride's Beauty,' and dwelt upon the desiratum of daintiness of personal appearance, and of the home in general, which could only be acquired and retained by means of the proper kitchen utensils.

The Show Window.

"My show window was about eight feet wide by six deep. We decided to make a church interior of it. As I look back upon it, that seems an apt thing to have done. We might have made a good display of kitchen stuff but that is done so often that it is tiresome. We wanted something unique and at the same time, something apropos of the subject in hand, viz., brides—not a steam engine built of hardware, or something of that nature. That would have been clever but it would have lacked the human interest that governs the psychology of sales.

"We first covered the floor with tightly stretched canvas, and then by the aid of wall board and our graining process made the two side-walls and end and roof of the rear interior of a church. We made an arched roof and made it high to lend impressiveness to the picture. At the point where wall met roof, we stretched fishing rods across bending them slightly to give the effect of arched beams. About mid-way of our building we piled up inch-and-a-half tool-steel, one long piece at the bottom, two shorter ones in the next larger, and then three shorter still, so as to give the effect of the steps that approach the dias of a church. We made the latter out of spice and bread boxes, which we laid in between the last of the tool steel and the end of the building. We stretched a dull colored hammock from the foot and centre of the dias down the length of the church and on either side of it built up the pews out of boxes of one size and tacked wall board on the rear of them to serve as backs. The first three rows of pews nearest the dais were then roped off from the rest by means of steel tape and electric drop cord to give the impression of the ribbons used to separate the bridal couple's relatives from the other spectators of a church wedding. We reversed lawn sprinklers for footstools and hung up bathroom fixtures for prayer-book holders.

"At intervals up the aisles we had steel fireplace pedestals set up on either side, and on top of them placed brass candelabra.

"This completed the body of the church, of which we only showed a small part. Our next task was to arrange things on the dais into as near an exact replica of the real thing as we could manage. On the right we made an inset in our wall at the head of the steps. Here we set up a pipe organ. We piled up, one on top of the other, two of the tallest radiators we had in stock. On either side we built up shorter pipes of thin rolls of wire cloth, gradually losing a little in height in each one that we built up until a graduated slope was formed by the difference in height of the pipes. A cut glass punchbowl served as a font. A reading desk was made of boxes of hardware and properly tilted at the top. It was covered by the finest steel chains we had in the store, to serve as a cloth. We hung coarser ones from the front and two sides of it so as to form a screen such as one usually sees in a church. The pulpit was built up of small window screens, and they in turn were covered with chains. The altar was built in the same way, and covered with one of our extemporized steel altar cloths. In the front of the dais we placed brass fire-place fixtures to serve as railings, merely leaving an open space in the centre, opposite our hammock carpet. The choir's seats were easy. It was merely a case of building a few sloping tiers of pews, similar to those in the body of the church. Our greatest difficulty occurred in getting up natural looking windows for the end of the building. We finally hit upon the scheme of mounting several panes of ordinary window glass that had been cut into the proper shape beforehand. Behind these we stretched bright-colored hammocks, and then with white lead and putty we made small squares all over the window. This gave the desired effect of leaded panes of colored glass.

"We were quite free in our use of brass knick-knacks, such as candelabra and other pieces that could fit into the picture.

"Charlie offered a cash prize for the best combination of chimes that any of us could make up from the bells in stock. I finally pulled it down myself by rigging up an assortment that I placed in a box in the rear of the store and connected them up with a wire to the door. Every time the door was opened the chimes began to ding-dong, and pealed out quite naturally and as though from a great distance.

"We gave the whole store an added touch of freshness, so that the place had quite an interesting look. Crowds of people came in just to hear those chimes ring and see what we had done inside. Except for the old shoe that hung over the entrance, we used nothing but hardware in the whole display. That window was a winner, and old Charley most certainly rang the bell on that idea. The idea of making our store and show window and ads. one big bridal show made a hit with the newly weds and the young fellows and older women besides. It went right to their hearts, and we had a banner month in kitchen stuff.

"One young couple asked for a pic-

*Manana—A Spanish or Mexican term, meaning to-morrow, and frequently used by them in deferring actions on matters.

TEAR OUT THIS PAGE

THE problem of selecting kitchen utensils and household necessities is one that confronts a large number of brides at this season of the year. There are so many lines carried in a hardware store that many of them are liable to be overlooked or forgotten by the purchaser or by the salesman. A good plan to follow is to have lists ready for easy reference. The customer generally has a list, but as a general rule, it is incomplete, and the customer sometimes becomes irritated by being offered lines for which she has no use. When a list of suggestions is provided, it can be handed to the customer, who can peruse it carefully and leisurely without being disturbed or annoyed by a clerk offering many lines in which the prospect is not interested. In some of the towns and small cities there are firms who send out practical booklets containing lists of household necessities. By watching the newspaper announcements, the firms are enabled to get the names of many newly married couples.

The following list contains some of the lines usually carried in the hardware store, and can be added to if necessary.

HARDWARE AND METAL

VOL. XXVI. No. 22 Toronto, Canada, May 30, 1914 Two Dollars per Year

The Wedding Present Trade

HAVE you ever figured out how many lines of goods you have in stock suitable for selling as wedding gifts, or have you ever featured these lines during the wedding present buying season? If you have been keeping abreast of the times and have watched and followed the methods employed by some of our successful leaders in the hardware field, the chances are that you have in stock at the present time many lines which could be sold to customers wishing to purchase wedding gifts. There was a time when the buying public did not look to the hardware store to supply articles and devices suitable for wedding gifts, but times have changed, and to-day we find that a large volume of wedding present trade is handled by retail hardware men. Goods purchased from the hardwaremen are usually practical as well as ornamental. The average wedding present purchaser wishes to purchase a present which will be useful and feels inclined to visit the hardware store providing, of course, that the hardwareman makes it a point to impress upon the public the fact that he has the goods suitable for the occasion. In this issue you will find many pointers which will assist you in placing your goods before the public. One manager tells him he finds it profitable to push the sale of electrical devices. He not only makes a profit on the sale of the wedding present, but he also looks for future business and does not lose any opportunities which may be grasped. His success in selling wedding present goods should cause other hardwaremen to stimulate their efforts, and endeavor to secure a large share of the wedding present trade.

Canadian Window Dressing

ELSEWHERE in this issue will be found a complete account of the results of a recent window dressing contest together with a full description of the winning window, and the views of the winning firm on the subject.

This contest was open to the hardware dealers of Canada and the United States and the winning of first place by a Canadian firm is but another proof of the efficient methods that have now become the order of the day among Canadian hardware merchants. The window dressing methods of our hardware dealers have improved to such a great extent in recent years that that body as a whole may be safely said to equal any other similar national body, and to be surpassed by none.

No one other than those actually engaged in the long struggle for the raising of standards and ideas in this line can fully realize the magnitude of the result attained by those Canadian men and firms that are now setting new standards in window dressing to other countries.

If one but scans the recent lists of such contests, the number of winners hailing from this country is found to be truly surprising. It is to be hoped that in the flush of victory we will not forget that "Eternal vigilance is the price of Liberty," and so be tempted to rest on our oars, content with past laurels. It is indeed a matter of mutual congratulation that our firms have seen their best efforts so rewarded and we most sincerely trust that they will be as well repaid in the future as in the past.

Half-Holiday Sales

THE one reason why many hardwaremen hold back from observing the weekly half-holiday is for fear that their business total will suffer. It is a question whether any loss would be felt, the result depending entirely on local conditions. In any case, it is possible to retrieve, or rather, prevent this loss, by the application of brisk methods. Some merchants hold half-holiday sales and thereby manage to do as much business on the morning of the half-holiday as they ordinarily would have done during the whole day. The sale idea is carried out by selecting a number of particularly seasonable lines and advertising them as specials for the morning of the half-holiday. Window displays, put in the day previous, help materially to arouse public interest in the event. It is generally necessary to offer some special inducements to bring the people down to the store in the morning, and this is generally accomplished by a slight shading of prices.

It is a broad question whether such sales are advisable in the long run, and one which cannot be entered into here. There can be no doubt, however, that the idea solves the difficulty of the merchant who is anxious to fall in line with the half-holiday movement, but is held back by the fear of losing business. In the next issue Hardware and Metal will publish a list of towns and cities with days on which half-holidays are observed.

The Business Situation

REPORTS from retail merchants in various parts of Canada indicate that business has been brisk during the past week. The improvement can be attributed in part to the improvement in weather conditions and the consequent demand for spring and summer goods. It is generally believed that the month of May has been fairly satisfactory, as far as hardware firms are concerned. Paint manufacturers report that business with the retailers is brisk. The metal markets are still very quiet and continued weakness is shown. Orders are of a hand-to-mouth variety.

Stove manufacturers are finding a ready sale for summer stoves and equipment. Booking for fall delivery is fair. Some retailers have carried over a large number of stoves from last year. There is a general feeling prevailing that as far as the hardware trade is concerned business is fairly good—although possibly not as excellent as we might hope for. No doubt conditions will continue to show steady improvement. Business was admittedly backward in some lines of spring goods on account of the backward weather. In the Eastern provinces the weather not only had a bad effect upon farm and fishing interests, but upon trade generally.

Despite the fact that money continues tight, business in the various trades seems to be on the gradual up-turn. Commercial houses report collections as fair and paper is being met as well as the same period last year. A noticeable feature of business is that the country districts are purchasing in greater quantities than for some time previous. Real estate and building remain about the same.

The Metal Roofing Situation

IN LAST weeks' issue a letter appeared from a retail hardware merchant in which he complained about manufacturers of metal roofings going over the heads of retail hardwaremen and selling to carpenters and contractors, thus affording no protection for the retail hardware merchant. Hardware and Metal has made inquiries and finds that there is a great deal of truth in the statement that a large amount of the metal roofing business passes through the hands of local contractors and builders, who represent makers of metal roofings. This condition of affairs—a very unfortunate one—has been brought about, so the manufacturers say, by the apathy of the retail hardware merchant. For many years manufcturers protected the retailer—in many cases still do so. But it has been found that a large number of the retail hardware merchants were inclined to overlook the possibilities for sales in the metal roofing line.

Too many merchants were under the impression that they could handle the metal roofing business from the store without going out after it. The manufacturers found that hardware merchants were not taking advantage of the opportunities which were being presented with the development of the metal roofing industry, and in order to protect themselves and to secure the marketing which they thought their product deserved, they were forced to appoint agents who would go after the business. Many of the agents selected were men in the contracting business, and who kept closely in touch with the farmers —who, by the way, are large purchasers of metal roofing, etc.

A large percentage of the orders for metal roofs is placed during the period from January to April 30. This being a rather slack season for the retail hardwareman, is a period when he should get out after the metal roofing business. Manufacturers claim that many hardwaremen have not canvassed for business, and have not secured it.

There are, of course, many retail hardware firms who do a large volume of business in metal roofing. These firms are protected by the manufacturer for whose line they hold the agency. Some of these retail firms have held agencies for many years and seldom offer complaints. It is unfortunate that the metal roofing business is not handled by the retail hardwaremen, but it appears as though the situation is one that has been caused by some hardware dealers not taking advantage of their opportunities.

Another point which should be borne in mind is the carelessness exhibited by some retailers in answering correspondence or in acknowledging the receipt of specifications which have been prepared at considerable time and expense by manufacturers. One manufacturer complained bitterly about the apparent lack of interest shown by some retail hardware merchants. He stated that every day his firm is asked to figure on specifications. This is done willingly, but at considerable expense. The specifications are returned to the retailer and no more is heard of them—not even a card acknowledging receipt of same. This apparent lack of interest does not encourage the manufacturer. Manufacturers of metal roofing state that some of their best and biggest customers are retail hardwaremen, and for these merchants ample protection is provided. On the other hand, where retail merchants will not get out after the business the manufacturer has found it necessary to secure agents who will.

The manufacturer must find an outlet for his products but he should endeavor to do all he can to protect the interest of the hardware merchant who is willing to push the sale of metal roofings and shows that he is working his district systematically.

It seems unfortunate that the hardware merchant who is willing to go after this class of business and who endeavors to do justice to the manufacturer should have to suffer for the negligence of others.

Editorial Briefs

WHAT ARE YOU doing to secure the wedding present trade?

* * *

THE WISE MERCHANT multiplies his knowledge ad infinitum—both for himself and his employees.

A WORD TO the wise is sufficient. In selling poison products obey the law to the letter.

ELECTRICAL DEVICES should occupy a prominent position in your display spaces during the next month.

Canadian Hardware Firm Wins $100 Prize

Mills Hardware Co., Hamilton, Wins First Prize in Starrett Show Window Contest Open to Canada and United States—Description of the Winning Window.

By Nelson Mills, Vice-President and Manager, Mills Hardware Co.

SINCE we have been so fortunate as to have won the first prize in the L. S. Starrett Co.'s show window contest, it is with considerable pleasure that I give the description of the winning window and a resume of our display methods in general, for the benefit of those interested in what constitutes such an important point of a modern hardware merchant's selling campaign.

The particular plan of this display had never been used by use before, nor, for that matter, has it since, as we make it an invariable rule to be as original as possible in each new display and are continually seeking new ideas to try out in our windows, rather than to stick to one that may have been successful in some previous display. It does not necessarily follow that a catchy and unique plan for a paint display can be equally well adapted to a tool display, or vice versa, to say nothing of the danger of such a general design becoming too familiar to the potential customer we seek to attract, so much so that it may leave him indifferent instead of arousing his attention and curiosity by the very newness of it.

That familiarity breeds contempt is equally true of show windows as of other things. This fact is well exemplified in the results of our experience of checking up results on displays. Although we find that a bright snappy window brimming over with selling arguments, invariably increases our sales through the force of its silent argument: we also find that after a week it is dead, flat, arouses little curiosity, and occupies the same position to our "store plant," that an idle machine does to the factory that gives it floor space. In consequence, we never allow a window to remain in for more than a week and quite frequently are content with less.

Another practice of ours in order to get away from any monotony of windows is to offer great variety in the articles displayed in consecutive weeks. For instance if we show machinists' tools this week, we would not consider showing carpenters' tools next week, for the simple reason that although the window would be different, the line would be much the same and would not attract the passer-by, because a big percentage of the same crowd passes by on the same street, each and every day. It stands to reason that if the passers-by have seen a machinists' tool window for a week, that they would be more interested in a display of silver for instance, or paint or any one of a variety or articles rather than another tool display.

We are of course bound to show seasonal goods at opportune times, and when we find that the conditions of the weather or some peculiarly local condition makes it necessary for us to change this plan: we usually make a "quick change" by making a display of some

Canadian display which took the $100 *first prize in the Starrett window display contest. The display was arranged by A. R. Munro, assistant manager of the Barton St. store of the Mills Hardware Co., Hamilton, Ont. The contest was open to Canadian and American firms and Mr. Munro is to be congratulated on bringing the first prize to Canada.*

Window display arranged by Clarence J. Gaynor for the Aikenhead Hardware Co., Toronto, and entered in the Starrett contest. The display was considered of especial merit. The window is 14½ ft. long by 7½ ft. deep. The floor of the front part is draped in red felt. The background at the top is decorated with Starrett's trade-mark window trim, and pennants are suspended from the ceiling. Note the lathe which was in motion, driven by 1-3 h.p. electric motor which is concealed. One end of the window is decorated with hack saw blades up to 24 inch. The other end of the window is dressed with firm joint calipers. The window is brilliantly lighted by 12 powerful electric lamps which are turned off each night at 11.30 by an automatic time switch.

Window display which received honorable mention in the Starrett contest. The display was arranged by Chas. Byford for the Bond Hardware Co., Guelph, Ont. By examining this display it can be seen that the window trimmer exhibited exceptional care in arranging the display.

bulky article that can be used in such an emergency for a short period of one or two days at the end of which time we would change again to a more seasonable display.

For instance, after making a display of carpenters' tools and contemplating one of garden tools, we might run in a "quick change" of refrigerators, washing machines, etc., between the two. This versatility of display can be carried to extremes very advantageously. For instance, a window full of hammers may be ever so unique in arrangement, and may give the merchant a certain amount of advertising and indirect benefit generally but it is only his hammer sales that will soar, whereas the same result in that one article could be obtained besides the increased sale of a multitude of others by simply making the hammer one of a large variety of tools in the display. The importance of this fact cannot be enlarged upon too much.

We also, of course, put legible price marks on every variety of article in the window. The importance of this custom is too well known for it to be necessary for me to dwell upon it at this time.

It might be well for me to further mention that the Mills hardware stores try to exhibit originality of idea and execution; something that spells distinctiveness and individuality and seems to command "Stop! Look! and Listen!" Once the individual's attention is so attracted the idea will walk right into his mind and if he be a potential customer, you have made a sale. If the window is an artistic one, it will attract and if it is the one; it is also the other, viz., a selling window. One follows the other as night does the day.

We usually make our changes on a Wednesday and follow up with a sharp advertising campaign in two papers on Thursday and Friday, drawing attention to the articles displayed in a way that will appeal to local needs and conditions. In other words we believe in going into the particulars that will appeal to the peculiar needs of our customers, rather than in generalization that simply makes broad and sweeping statements for this article or that.

These ideas, followed out consistently, will, I firmly believe, increase the sales to an unbelievable extent; at least I can truthfully say that such has been our experience and gladly offer it here for what it is worth to others.

The Starrett tool window that has been the occasion of this article was a very successful sales agent and a general description of it might not be amiss in connection with the accompanying photograph.

The window in question is seven feet wide by six feet deep. The general idea was to catch the eye by the prominence of the background, whilst the floor space was used for the more particular details of the display itself.

The wall of the background was composed of a wooden framework panelled with wall board and covered with black cloth, edged with white cotton rope.

The centre panels were an inset of four inches in thickness, and consisted of pleated cheese cloth.

The pedestals were of wood, and were covered with canton flannel to offset the black cloth that covered the floor. Actual tools were placed in the centre of the Starrett signs on the wall, the centre having been cut out for that purpose. The lower placards are the stock Starrett signs, but the lower were specially got up by the Mills Hardware Co. for the occasion.

The floor front was given over largely to inside calipers and miscellaneous tools. The lower front of the main pedestal was covered with micrometers and calipers, mostly of the outside variety. Combination sets, centre heads and miscellaneous filled the first shelf of the pedestal, and this arrangement was varied up above by the addition of squares.

The left hand pedestal was covered with a miscellaneous arrangement of tools on top, while nail sets and centre punches were added below.

The right hand pedestal had rules, calipers, and squares near the top, inside micrometers in the middle, and both varieties of calipers near the base.

Each tool was a Starrett and had the price marked on it in plain figues.

A. R. Munro, assistant manager of our Barton Street store, dressed the window, and we are naturally proud of his efficient work.

THE STARRETT CONTEST.

The show window contest conducted by the L. S. Starrett Co., Athol, Mass., proved to be a most interesting sales plan. In planning the contest the Starrett Co. arranged for four money prizes, $100, $75, $50 and $25 respectively. Advertisements for the hardware papers were prepared and circulars were sent out announcing the contest. Free window display outfits were offered to dealers who desired to use them in trimming their windows. A complete set of rules was gotten up by which contestants were to be guided. A jury of awards consisting of competent men was selected so that every dealer might feel absolutely certain of an equitable decision.

The rules were as follows:

No. 1. The window must be originated and dressed by a member of the firm, by an employee, or by the regular window dresser.

No. 2. The window must contain as its basis mechanics' fine tools taken from stock, and may have any shop scenes or typical uses of mechanics' tools or hack saws to add human interest. The size of the display is not the deciding factor.

No. 3. No firm shall receive any help whatever from our representatives in the planning or execution of the display.

No. 4. The display is to remain in the show window not less than one week.

No. 5. Every contestant must procure a photograph, at least 5 x 7 inches, of his window at his own expense and mail a print to us. This is to remain our property, whether or not the window is a winner. The negative is to be sent to us if we ask for it. The photograph must show the display as it is for the entire week. If a man forms a part of the display, the number of hours he is on duty must be stated.

As it was impossible for the judges to travel all over the country to select the best window, it was decided to have the judging done from photographs, which each contestant was to furnish. Over 700 requests for window display material were sent in to the L. S. Starrett Co. from all over Canada and the United States, and from several foreign dealers. Photographs began to arrive soon after the contest was inaugurated, but of course the big flood came just prior to the closing date. The judges got together and discussed the merits of the various photographs, making their decision on the basis of the probable power of the window to sell goods. After the judges had made their decisions they were announced by the chairman, Mr. Soule.

The first prize was won by the Mills Hardware Co., Hamilton, the other three money prizes being won by American firms.

The Bond Hardware Co., Guelph, Ont., secured honorable mention and will receive a photographic enlargement of their display.

The first four prizes, as already stated, were money prizes; the next eleven were photographic enlargement of the respective windows of the contestants, while all those who did not receive prizes will receive from the L. S. Starrett Co. a copy of the book, "How to Sell Hardware," by Roy F. Soule, as a consilation prize.

Canadian exhibits considered of especial merit were those of Martin Finlayson & Mather, Ltd., Vancouver; Beauvars Bros., Montreal; J. H. Ashdown Hdwe Co., Ltd., Calgary, and Aikenhead Hardware Co., Toronto.

Wedding Gift Windows that Bring Big Results

Winnipeg Window Trimmer, Who Has Charge of Battery of Thirteen Windows, Tells How He Arranges Cutlery and Gift Displays—Two Excellent Displays.

By C. H. Smith, with J. H. Ashdown Co., Winnipeg, Man.

WINDOW trimming is fast becoming one of the most important features in the business of all successful retail merchants, and is now recognized as one of the most valuable mediums of advertising possible for the retailer. .

That window displays are considered important is fully demonstrated by the fact that so many of our leading manufacturers are continually holding big window display contests, offering large cash prizes for the best displays of their respective lines of goods. The greatest window display contest that window trimmers have ever had an opportunity of participating in, is soon to be held, with $15,000 offered in prizes, $2,000 for the best window display.

Just think of it, and yet some merchants use their display windows more as a storeroom than for window displays.

Now any merchant who is the least bit dubious as to the value of window displays will surely begin to realize that there must be some value in windows, when an organization of manufacturers is willing to spend $15,000 on good displays.

There has been big improvement in the quality of hardware window displays in the last few years, and no doubt the large number of contests held by the trade journals and manufacturers has been responsible for much of this advancement. That merchants are realizing the value of good windows, is particularly noticeable in the West, where many stores employ regular window trimmers.

Has Thirteen Windows.

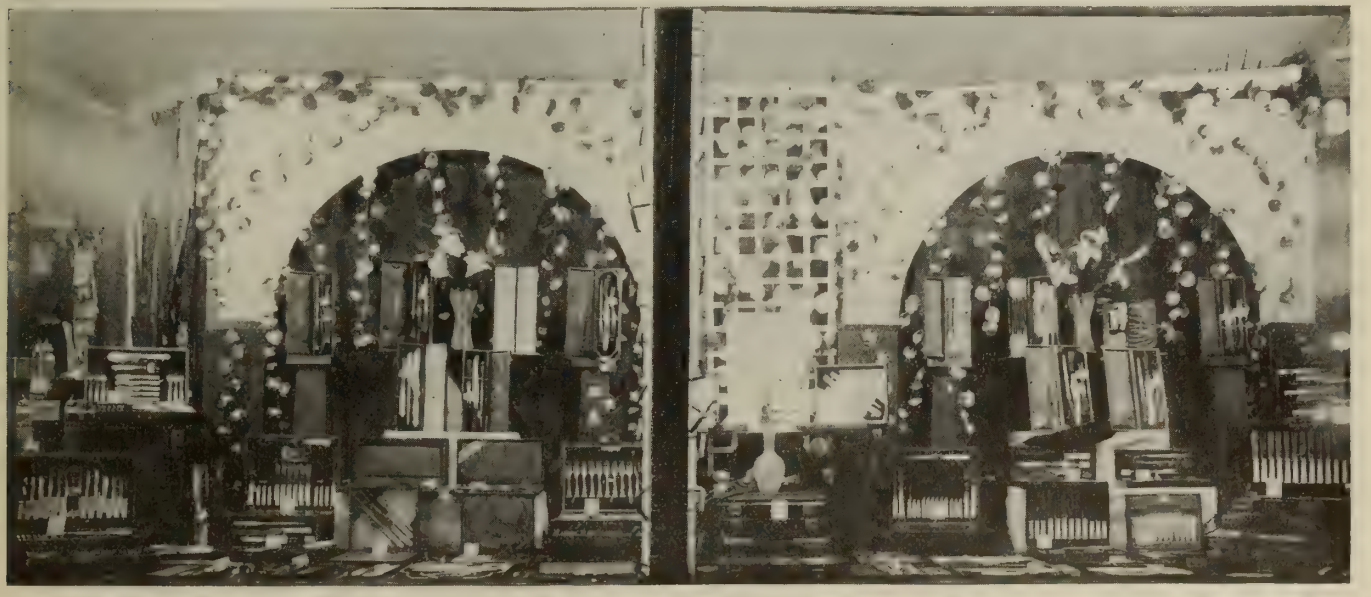
The writer has a battery of thirteen windows to keep working, and in order to get the best results, changes all windows once a week, and in some cases uses special windows which are left in for one or two days. The displays are all planned one week ahead, so that when the time comes to put in the display everything is ready and no time is lost.

In order to make the windows more effective the advertising is planned with them and this is found to be beneficial to the windows and to the advertising, as they are both working together.

Every hardware store has a great many different lines of goods which make excellent displays, and which sell more readily when shown. No trouble should be experienced by window trimmers in making numerous changes of display.

Cutlery makes one of the most effective displays possible and can be used in so many different ways, beautiful window displays can be made with cases of cutlery and carvers and it is always seasonable.

The window of cutlery shown was a very effective display, being a large one and showing a very complete assortment with a price card on every article. The colors used were pink and red, and the flowers were Easter lilies, violets, and large white snowballs.



Planning the Display.

When making a display of this kind the first thing to be considered is the background and in every window the background plays a very important part.

The arches on the back were cut from sheets of beaver board and then painted a delicate shade of pink with flat paint. On each panel around the arch were ten frosted electric lights which gave a very pretty effect.

The entire back was covered with red sateen and then the arches were placed about one foot from the back with lattice work between them. In each arch was built a stand of shelves and covered with pink sateen.

(Continued on page 60.)

The above excellent display of cutlery was arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Winnipeg. The arches in the background were cut from sheets of beaver board and painted a delicate pink with a flat wall paint. On each panel around the arch were ten frosted electric globes. The flowers used were Easter lilies, violets and large white snow-balls. The bottom of the window was covered with red sateen, and red velvet was used to drape over the stands and across the bottom.

Going After the Wedding Present Trade

Leads to Follow Up in Order to Get the Custom of Those Who Are Starting New Households as Well as That of Their Friends.

By G. Eustace

NOW that the time of brides and wedding showers is upon us again, it behooves all good hardware men to prepare for the riot of love the young people's thoughts turn so lightly to at this season.

Love and hardware. Well, there have been stranger teams.

So many things suggest themselves in this connection that one might go on indefinitely enlarging upon the selling ideas that may be applied to the June bridal trade.

This is your opportunity, Mr. Hardware Dealer, to gain friends and customers for the lean years ahead. In short, to lay something by in the way of good-will for the proverbial rainy day, by securing the trade of these new households that are springing up all about you—like mushrooms over-night. Let us all work together to make this a brides' week. If enough men in enough towns think and talk and act "brides' month," "brides' month," it will be in response to those strange physological laws that we see working on every side of us without fully understanding them. If this work is approached in the proper spirit and in unison, a great deal of trade that in the natural course of events would flow in other channels can be diverted into hardware, the "father of waters" in the streams of trade. Remember that some of the largest families that are your most profitable customers to-day once consisted of a young couple confronting the world hand-in-hand, confronted with the problem of fitting their future home up in the most practical and economical manner, consistent with good taste and efficiency.

Reverse this idea and you awake to the fact that the young bride and groom to-day are making a new home in your town, one that in the natural order of events will last for years. Fortunate is the merchant who seizes this moment to go to their assistance and win an enduring place in their hearts by helping them furnish their nest, that dear place that will hold for them in the years to come, recollections of such a tender nature that anyone who had a hand in the making of it will forever be their friend.

It is quite reasonable to suppose that your young couple are inexperienced in purchasing anything much other than clothes,, and, as for fitting up their home, they have as yet nothing but ideas. This fact is full of possibilities.

Honest sales service on your part is, of course, the basis of the whole relationship that you seek to establish. It is your foundation for their superstructure of gratitude and good-will to one who really helped them. Give them their money's worth. Do not take advantage of their tempting inexperience, but rather let it arouse your sense of honor to do as you would be done by and give them the benefit of your broader experience in home building.

Naturally your interest centres in hardware. But there is every inducement in the world for you to enlarge your sphere of action in this case and help them in other departments other than those that directly concern you. This may take some of your time that you can ill afford to lose. It will not be lost, as time will prove.

One department of a house is as much dependent upon another as are those of factories. They are so co-related that they must literally dovetail to satisfy the modern insistence for efficiency. Hence, however good the kitchen plant that you sell them, they will not realize the same if it does not fit into the general scheme of their house, and may even blame it and you for the fault of another department.

Here is the opportunity for the pro-

The above display of cut glass and silverware arranged by C. H. Smith shows how this line of goods can be attractively displayed in a manner that will draw attention. The background is much the same as that shown in the cutlery window. The arches were cut from sheets of beaver board and painted. It will be noted that a neat price card accompanies each article. The bottom of the window was covered with red sateen and red velvet was used to drape over the stands and across the bottom.

gressive dealer to be of real service. Instead of selling the young couple whatever they ask for, even though you know that they will be dissatisfied with it, why not suggest that you may be able to advise them to advantage. Ask to see the kitchen that they will use, the variety of fuel that they will burn, and a score of things will present themselves for your consideration.

For such a house and for so small a family this size of dish pans is too large—that grade of china out of keeping with the furniture. In short, is there any reason why interior decoration cannot be applied to hardware as well as to furniture and fabrics?

Many brides of limited means are apt to furnish the parlor to the detriment of the kitchen.

Then let your plea be to such: "If you must sacrifice something, do not let it be the most important part of your factory—the kitchen. Make it invulnerable; make it such that your family is always well fed. To feed well you must have the proper utensils. Here they are," and then the logical explanation.

The beauty of this idea is that your first sales, however heavy they are, will be but a drop in the bucket of your total with these new customers. They will be heavy buyers for a year or two, replacing things and making purchases of other articles as the need for them arises.

Then, after they are well settled in their new home, there is always their future normal trade to be reckoned with as a valuable asset in your stock of good-will. From the nature of things they are usually a good paying class of customers.

These facts make this class of trade particularly valuable, and the peculiar nature of the occasion makes it possible for those interested to exercise great ingenuity in placing their wares before their customers.

Small and compact sets of china, cutlery and kitchen utensils could be made up to go with a suitable stove, and offered at reasonable prices as bridal sets. They could be made very complete and embrace all the necessary articles of hardware. In a region of cheap electric power, electric devices and extras could be pushed to advantage in this way, and in a gas region a gas stove. Anything that offers unusual advantages of efficiency and bears the stamp of modernity is bound to appeal to the young.

Window displays could be made of model kitchens, changing them every day or two so as to offer a pleasing variety. The perplexed young thing who is so busy getting ready her trousseau and attending to the details of the wedding, would literally fall on the neck of anyone who would relieve her of problems of so mundane a variety as pots and pans.

Give the store a gala appearance throughout. Run snappy ads, pointing out the distinctive features of your goods, and your plan of co-operation in kitchen furnishing. Appeal to their pride in having the smart, the correct thing. Make a strong bid for the friends who are giving showers. Ask them to send a representative to see you first. They will come. The one terror of those who give to brides is that they are merely duplicating the gift of another. Inform them that you will post each purchaser on other's gift in order to avoid duplication.

A great deal can be made of a display showing a model table set for two. This would enable one to show a catchy line of cutlery, china, electric fixtures, etc.

In talking to the young people, quote your own womenfolk as to their success with this or that and the other. It helps to do away with the embarrassment they sometimes feel in making their first purchases.

Write a personal letter to each of the woman's clubs in your town, telling them that you make a specialty of kitchen showers, and you will be surprised at the results. This is a woman's game, and it pays to keep in touch with them.

In circularizing, it is well to give your letters as personal a touch as possible. People are too apt to toss aside the ordinary circular without paying it the courtesy of a glance.

"All the world loves a lover." That phrase can be made to pay cash dividends.

If all the world loves a lover, why not lover's things? Ergo, why not the lover's things you offer so attractively by window, ad. and letter?

Do it now!

THE COUNTRY STORE AND HOW IT STRIKES A STRANGER.

The writer of this article is the wife of a farmer in the West who buys all her goods from the stores in the nearest town, not believing in mail order purchases. Her impressions of the country store will, therefore, be of interest.

Does the country storekeeper ever think, how the appearance of his store strikes a stranger? In most cases he is more interested with the inside of the store and lets the windows take care of themselves; but in these days of keen competition it behooves the storekeeper to use every means to make his store attractive to the casual passerby as well as to his old customers. If you give a child his choice of a candy out of a bit of newspaper in one hand or out of a pretty fancy box in the other, which will he take? Not hard to say. He will take it out of the pretty box —and grown up folks are much like children in many ways. They will buy their goods in the attractive shop, Therefore get the windows brightened up, probably there is some youngster aching to earn a few cents on Saturday morning by making that window shine. And what about having a special display on Saturdays for boys with base balls and bats, etc., and next time something for the girls, pretty ribbons, perfumes or candies? A small ad. in the window the day before will bring them wondering.

Housewives, young men, as well as old men and youngsters can all be catered to by just showing a few things in the windows which often are crowded out of sight inside the store.

To keep up-to-date and let nothing linger on the shelves too long to get dusty and spotted is good business, and also an occasional bargain sale and clear out old stock and give the bargain hunters a chance. All such aids help. The country store is a friendly, happy institution and worth every effort to make it a success and a paying concern.

—A CASUAL OBSERVER.

REMINISCENCES OF JUNE.

(Continued from page 44.)

ture of the window, and that gave us the idea of offering one as a premium with our sales that month, and it really proved a splendid drawing card, for that window most certainly did attract and hold attention.

"I suppose that you young fellows will be applying the same idea to airships and hydroplanes soon. Make the young people think that such articles are a necessary adjunct to their happiness, eh? We old fellows must make woy for you, as others did for us.

" 'There's nothing new under the sun,' Charley often used to say.

" 'Oh, well, it's all in a lifetime,' and the old hardware man sighed."

Building Up a Neglected Paint Trade

Merchant in a Small Town Sold 800 Gallons of Paint Last Year in a Store in Which for Many Years the Paint Department Had Been Neglected—Various Methods Employed.

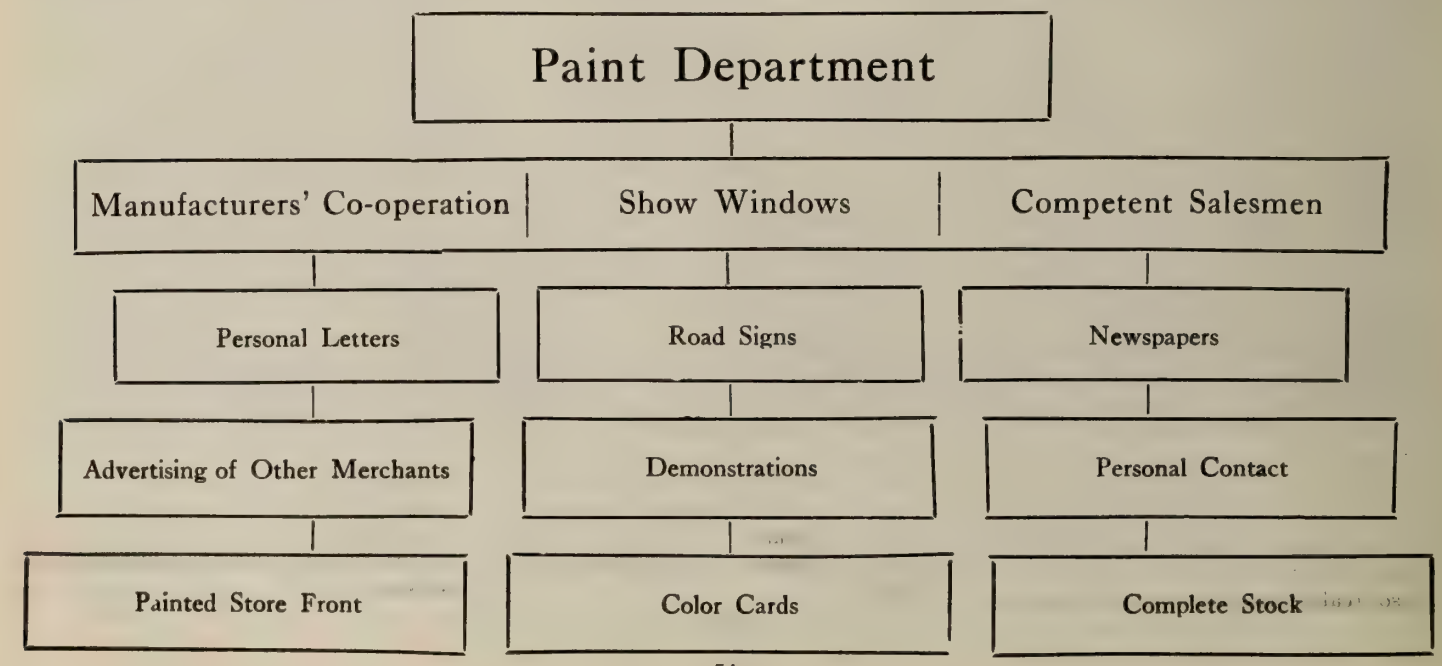
By a Northern Ontario Dealer.

WE sold last year 800 gallons of ready-mixed paint. This quantity included inside and outside ready-mixed paint, floor paints, wall paints, barn and fence paints, shingle stains, etc. We also sold a very large quantity of sundries, including varnish stains, enamels, buggy paints, aluminum, pipe enamel, floor wax, etc.

To some merchants the quantity will not seem very large, but when you consider the size of the town in which I am located, and the small amount of paint used previous to my arrival here about four years ago, I consider that I have done remarkably well. When I commenced business here I took over a store which had been established for eight or ten years. The former proprietor had done a fair volume of business but he was not aggressive. He did not exert himself to any extent in getting out after business, and as his opposition (consisting of two other firms) did not advertise in the newspapers he did not think it necessary either. When I took over the business in January, 1910, I decided that I would go hard after spring business. After making investigations I found that the former proprietor's spring trade was composed largely of heavy hardware, screen doors, etc., but he had apparently fallen down badly in his paint department. His total purchases for the preceding year did not run up to a very large amount. He had the agency for a well-known and widely advertised brand of paint, but apparently he did not co-operate to any great extent with the manufacturer. In an upper store-room I found a large stack of road signs, posters, display stands, banners, etc., and judging by appearances some of the matter had lain there for several years. Some of the advertising matter was too badly soiled to be of much use so it was discarded. The remainder, which presented a good appearance was taken downstairs and held in readiness to distribute at the commencement of the spring campaign.

I realized that paint — and a large quantity of it—was needed in the vicinity, so I began in January to lay my plans for securing a large volume of paint business. To begin with I wrote the paint firm I represented to see if their traveler could not prolong his next trip long enough to thoroughly explain the nature and uses of the various products to myself and my clerks. The manufacturer readily consented to the plan and about the end of January the traveler arrived. He certainly told us a good many things about paint. We even opened cans of the various products and had them demonstrated on various kinds of wood—some of these wood panels are still in use as samples. When the traveler completed his task we were full of paint knowledge and enthusiasm. We got busy at once and placed the spring order, at the same time asking for a liberal supply of advertising matter.

The paint and advertising matter arrived about March 15 and after opening, checking and marking we were ready for the campaign.



We sent our delivery man and one clerk to the country with a load of fence signs, posters, etc., and these were distributed judiciously within a radius of ten miles of the store.

Our next move was to supply the manufacturer with a list of prospects. The first list consisted of about fifty names but they had been selected with care and were live prospects. To these prospects, letters and suggestions were mailed.

We contracted for space in our weekly paper and ran one paint and one hardware ad. in each issue.

We always endeavored to run bright snappy ads., and after four years' experience with newspaper advertising we believe it can be made a splendid aid in creating sales for the retailer.

Our show windows—which in the past had been neglected—were then given attention. We secured the services of a local painter and had the store front painted a deep carmine. The interior woodwork, etc., of the windows we had finished in dark oak. You never saw such a difference in the appearance of a store front in your life.

After doing a little painting ourselves and running a couple of neat window trims, which by the way had been supplied by the manufacturers, our efforts began to tell. Paint sales began to grow and we could see that we were on the right track. We did not rest on our oars but kept right on plugging and are still doing so. We frequently give demonstrations in the store on Saturday, and show how easy it is to apply the products we have the agency for. The show and sample cards supplied by the manufacturers are very useful and attractive, and when they are not being used in the show window we have them displayed in the store. We always try to keep our stock up in order to be able at all times to fill orders on short notice.

We keep closely in touch with the local builders and secure a great deal of trade from them. We still have a number of customers who stick to the lead and oil process, one man in particular buys a great deal of lead, oil, dry colors, etc., but we also sell him a considerable amount of flat wall paint. In time we hope to get them all using the ready-mixed product.

During the first year we did a very nice trade in paint, but since that time our sales of paint have increased steadily and we hope this year to break the record by a good margin. Personal contact helps in pushing the sale of paint. My clerks very often get valuable information regarding householders who intend using paint. We follow up every clue.

Now if you look back at what we have accomplished you will see that our expenditures were not large. We had to pay for our newspaper space and for having the store front painted—I believe it should be painted every year.

The manufacturer has been very fair with us and I believe that all reputable paint manufacturers will do the right thing by the retailer if the latter will only display a willingness to co-operate.

I suppose you will say, "that is all very well, but where does the two opposition stores come in. Did they go out of business?" No, they did not! They are still here and as far as I know are doing fairly well. As soon as I began to advertise and push paints, they fell in line and did the same thing. They also took space in the local paper. They paid more attention to their window displays and the result is that they also increased their sales of paint. I know that they will secure a good share of business and they are entitled to it, but it is nice to see them spending some money in advertising. I realize that my advertising and aggressiveness has helped them to make more sales but I also realize that their advertising and aggressiveness also helps me. When every merchant is talking paint you can get the whole countryside stirred up and everybody will benefit—especially the hardwareman.

If a merchant grasps each opportunity —and I know of no line offering more opportunities than the paint line. I do not see how he can help but make a success of his paint department.

It may be alright for some to sit back in their easy chair and wait for trade to come as a result of the labor of others but I believe in getting out and doing a little hustling on my own account and maybe I will be able to sit back in my easy chair a little later on in life.

"Mailorderitis"

By J. R. Vallillee, Buckingham, Que.

You have heard of Tetanus, La Grippe, and Pneumonia,
Diphtheria, Typhoid, the Mumps, and Insomnia,
But there's one dread complaint that is "Getting" the retailer,
Just as the sea "gets" the fresh water sailor,
It's a way they have found the better to fight us,
This brand new disease called "Mailorderitis."
Th' unfortunate merchant who falls for this culture,
And suffers the "Cheap-for-cash" catalogue vulture
To seize in its talons the trade of his section,
Is sure to rank low in the business election.
The farmer lolls back in his big Morris chair,
And the smoke from his Mail Order pipe fills the air,
And he signs a new note with his Mail Order pen
For his poor Retail victim to discount again.
Next he makes out an order to E——s, He sends
For clothing, machinery, for small odds and ends,
A dress for the "Missus," a suit for the son,
And as for himself, he has picked out a gun,
A twelve gauge, black powder; the picture looks fine,
And it shows the full outfit for four-fifty-nine.
It may be the gun has a sleigh shoe steel frame,
But the catalogue makes it look good just the same.
The Retailer, back of his counter, may think
That the trade of the country has "gone on the blink."
But it never occurs to his mind for a minute
That catalogue firms get the "Scads" that are in it.
Hard Cash is the reason for mail order success,
Hard Cash is the high road to selling for less,
Long credits, dead stock, and the lack of a smile
Have added a good many scalps to the pile.
The day of the old-fashioned ledger is o'er,
The slogan "Please Charge It" is current no more,
Retailers, who try to keep up with the crowd,
Get the coin for the goods, and "No Credit Allowed"
Is writ in large letters in every clerk's mind,
And their stores are advancing, not going behind,
The old country merchant, the good-natured chap
Who made "mailorderitis," is backed off the map;
By some sylvan stream, 'neath the staid chestnut's shade
His grave has been dug with a Mail Order spade.

NOT IN CANADA.

Under the heading, "Beads All She Wore, Then She Danced For Missouri State Hardware Convention," an American newspaper prints the following:

St. Louis, May 20.—Oscar Dane, son of the late Rabbi Messing, was made the "goat" to-day by the police when they summoned him because, as the theatrical booking agent, he had supplied the dancer who appeared in a single strand of small beads at a cabaret show given in the American Hotel annex for the State Hardware Men's Convention.

Dane—that's his stage name—told the prosecuting attorney he thought the girl wore something more than beads, but he was not sure.

Chatham, Ont.—Messrs. Back & Boa have opened a plumbing and heating shop at 48 Fifth Street.

Obituary.

Kingston, Ont.—The death occurred recently of Wm. Hamilton, of Hamilton Bros., tinsmiths and plumbers.

Tompkins, Sask.—The death occurred recently of Joseph Bradley, hardware merchant.

The death occurred recently at Toronto of Arthur C. Morris, secretary-treasurer of the Ontario Wind Engine and Pump Company, who had been ill for some little time with Brights disease.

New Cement Firm.

St. Mary's, Ont.—A new company to be known as St. Mary's Cement, Ltd., has been incorporated, with a capital of $1,500,000. The head office of the company will be at Toronto, the provisional directors being Alexander Fasken, Geo. H. Sedgewick, James Aitcheson, John W. Pickup, A. Struthers, Thomas O. Cox and Peter R. Ritchie, all of Toronto. It is understood that a number of St. Mary's citizens are interested.

New Warehouse For Toronto.

Brandram-Henderson, Ltd., have purchased a big block of land on Dundas Street, Toronto, just west of the Dundas Street railway bridge, and will erect thereon a mammoth new warehouse for handling their business in that territory. It is probable ground will be broken August or September 1, and the warehouse will be ready for service for the first of the year. With railway facilities at the back of the new building the company expect to be in a better position than ever before to handle their business in this district.

Ontario Incorporations.

J. W. Burgess, Ltd., Bala, capitalized at $40,000; head office, Bala, Ont.

Monarch Refillable Fuse Co., capitalized at $40,000; head office, Hamilton, Ont.

Ideal Plumbing and Heating Co., capitalized at $10,000; head office, Sault Ste. Marie, Ont.

Moore Hardware Co., St. Catharines, capitalized at $50,000. Incorporators, A. W. Moore, J. B. Archer, C. D. Home, B. N. Moore, M. E. Scott, all of St. Catharines.

The Vanstone-Reade Mfg. Co., Ltd., capitalized at $40,000, head office, Oshawa, Ont.: to manufacture hinges, butts, hasps, malleables, door hangers, sash blocks, lifts, door bolts, and shelf hardware. Incorporators, J. R. Reade, L. V. Vanstone, F. J. Bailes; L. M. Brooks, John Stacey.

Personals.

Joseph Henderson, of Brandram-Henderson, Ltd., Montreal, is on a trip to Europe.

Mr. Labelle, of C. Labelle & Co., Three Rivers, Que., was in Montreal this week on a buying trip.

C. H. Downes has joined the traveling staff of Brandram-Henderson, Ltd., and is working the city of Toronto.

Jas. M. Moore, formerly of Harriston, has joined the staff of the J. & T. M. Piper hardware firm at Fort William.

H. B. Byers, manager of the retail store of J. H. Ashdown Hardware Co., Winnipeg, is seriously ill. He became indisposed a month ago, returned to his duties, but was compelled to give up again.

Joseph Lariviere, proprietor of the hardware store at 1073 Notre Dame Street West, Montreal, is receiving congratulations on his marriage, which took place last month to Miss Lariviere, of Woonsocket, R.I.

K. D. Rose, who has represented the Carborundum Company, of Niagara Falls, N.Y., in this territory for a number of years has been transferred to the Central West territory and will hereafter be located at St. Louis. F. P. Hall, who has been connected with Rice Lewis & Son, Ltd., Toronto, will succeed Mr. Rose.

W. N. McNeil, representing Wm. Vogel & Bros., Brooklyn; J. H. Cameron, of Winchester Repeating Arms Co; Jas. Hossick, of Lufkin Rule Co., Windsor; Mr. Dunham, of Bonney Vise and Tool Works, Allentown, Pa.; W. E. McCray, of Bullock Manufacturing Associates, Springfield, Mass.; Charles Archibald, of Nicholson File Co., Port Hope, Ont.; Mr. Allister, of Shirley & Derrett, Toronto; and Mr. Mitchell, of Wolworth Manufacturing Co., Boston, Mass., were calling on the trade in Montreal this week.

Western Notes.

A. T. Swain has started in business at Central Butte, Sask.

German Bros. have opened a branch at Central Butte, Sask.

A new hardware store has been opened in Regina by M. Donald.

J. E. Birch & Son, Roland., Man., have sold their business to M. Horn.

The Saskatchewan Hardware and Harness Co., Bridgeford, Sask., have opened a branch in Gilroy.

Seth J. North, general manager of the Penberthy Injector Co., Windsor, Ont., called on the Winnipeg trade last week.

Sam Greeburg, who was in business at Jasmin, Sask., is starting a new business at Yorkton. His father has taken over his old store.

C. W. Groff, Miller-Morse traveler at Moose Jaw, was called off the road recently owing to the illness of his daughter.

The Saskatoon Hardware Co., Saskatoon, have added a line of bicycles and children's vehicles.

The Hodson Hardware Co., Maple Creek, Sask., have added bicycles and children's vehicles to their line.

George H. Sweet, formerly in Eaton's hardware department, Winnipeg, has succeeded Mr. Anderson in charge of Miller-Morse's cutlery department.

F. W. Nash, of the Oneida Community, St. Paul, visited Winnipeg recently. George Renuart, St. Pierre, a retailer, went up to the Manitoba metropolis last week.

Joseph F. Fisher is new Winnipeg traveler for the Miller-Morse Hardware Co. He was with the Marshall-Wells Co. for five years, with Caverhill-Learmont for two years, and was recently in the real estate business.

James Craig, head accountant of the Miller-Morse Hardware Co., Winnipeg, has been blessed with a baby daughter. Another man similarly blessed is Archie Cattanach, Portreeve, Sask., who was once head pricer for the Miller-Morse Hardware Co.

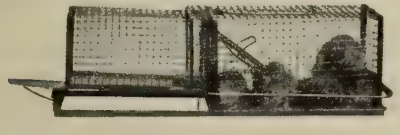
Morley P. Barnes, a well-known traveler for the Miller-Morse Hardware Co., Winnipeg, who covers the territory served by the C.N.R. to Le Pas, was held up in his bedroom at Canora, Sask., recently. The burglar or anarchist pointed a revolver at Morley and pulled the trigger. There was no damage done. It is due to the defective ammunition sold in that district by some particular Saskatchewan store that Miller-Morse has a traveler in the Le Pas district today.

New Goods Offered Canadian Hardwaremen

"TITE" PADLOCKS.

The Miller Lock Co., Philadelphia, Pa., is offering the Canadian trade the new padlock here illustrated. This new padlock comes in two sizes, the No. 1030

"Tite" Padlock.



and No. 1040. No. 1030 is 1½ inch in size. No. 1040 is the 2-inch size.

The padlocks have cast brass cases, malleable iron shackles and are finished in black enamel. Two steel nickeled keys are furnished with each lock and they come packed one-half dozen in a box.

One of the principal points emphasized by the Miller Lock Company with reference to this padlock is its appearance. It has been designed with the idea that beauty helps to sell a padlock. In designing a padlock of artistic appearance, the Miller Lock Company believes that it can be much more readily sold, as the first appearance impresses the customer.

THE KRIP TRAP.

The Oshosh Trap and Novelty Co., Oshkosh, Wis., is placing on the market the "Krip Trap" here illustrated. The trap is composed of two cages, a trap cage and a receptacle cage. The

Krip Trap.

trap cage rests and balances on a frame with a balance weight at the back end of the receptacle cage, and has a trap door at the front of the cage, on the outside, that acts as a platform for the rat to step upon. When the rat enters, its own weight causes the front end of the trap to drop, and the trap door closes in on the animal; a roller running up in front of the door holding it securely. This action also shoves the animal along, and rushes him into the receptacle cage, which also has a trap door. The front end of the trap cage then raises and the trap is set for the next victim.

The receptacle cage can be detached, and after making a catch, the rats are very easily disposed of, and the trap is very easy to clean. In case the rat does not enter the receptacle cage at once, the trap cage remains tipped and the door locked, no matter where the rat may climb. The bait is placed in a screen pocket in the trap cage very handily and is in open view, thus enticing the rat to enter. It is also protected so that it cannot be eaten up.

SANITARY UNDERGROUND GARBAGE RECEIVER.

Jones & Hammond, 77-79 Newborn avenue, Medford, Mass., are offering the Canadian trade a sanitary underground garbage receiver that will not freeze in

Sanitary underground garbage receiver.

winter, and that is said to be odorless in summer.

It sets level with the ground and has castings made from extra machine iron. It is easily operated and the company claims that it should last indefinitely.

The pails which fit into the underground garbage receiver are made of heavy galvanized iron furnished with bails and special brass hangers which prevent the pail resting on the ground.

The receivers are made with and without a foot trip for lifting the cover and with pails 14 x 23 and 18 x 25 respectively.

The accompanying cut illustrates the garbage receiver.

STARRETT TOOL CHESTS.

The L. S. Starrett Co., Athol, Mass., are placing on the market a tool chest bearing their names. Three styles of chests have been made and are ready for

Starrett Tool Chest No. 765.

distribution among hardware dealers.

No. 765 is the finest grade made and is covered with best leatherette with highly polished solid mahogany drawer fronts. The drawers and till are lined bottom and side with the best grade of green felt with special patent locking arrangement. The corners are raised and there is a nickeled plated mirror in the top of the till. The outside dimensions are 20 5-16 inches long, 7⅝ inches wide, and 12⅜ inches high. Shipping weight 17 pounds. The till is three inches deep. The large drawers 18¼ x 6 inches.

Two lower priced chests are similarly constructed, but made of different material. No. 76 is made of quarter sawed oak with five top drawers lined with green felt. The outside dimensions are 17 inches long, 7⅝ inches wide, and

Starrett Tool Chest No. 767.

12⅜ inches high. Shipping weight 16 pounds.

Chest No. 767 is made of hazelwood thoroughly kiln dried. The finish is satiny walnut. Its outside dimensions are 17 inches long, 7⅝ inches wide, and 10¾ inches high. Shipping weight 13 pounds.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

Business during the past week has been brisk with the retailer. The favorable weather has stimulated the demand for spring and summer lines.

Very few price changes have taken place. Turpentine has advanced at London, Ont. The metal markets are still very quiet and buying is of a hand-to-mouth character. The demand for paint is brisk. Summer stoves and camper's supplies are also moving in a satisfactory manner. Business in general is improving, also collections.

MONTREAL.

MONTREAL, May 27.—Trade continues to improve with the more favorable weather conditions, and seasonable lines have been selling much more freely. While some of the jobbers are rather dubious about the effect of the clean-up week on their business, there is no doubt that it helped the retailer considerably, and as the retailer was able to turn over a larger amount of cleaning utensils and materials, the jobber will reap the benefit in repeat orders later on. The retailers generally did not tak eas much advantage of the clean-up movement as they might have done, and profitably too, but it is anticipated that another year will find them lining up in better shape. The markets are rather quiet at the present time, and there have been no price changes in the past week. Most of the markets incline to a firmer tendency, with the exception of metals, which are still weak.

Harvest Tools Moving Now.

It is noticeable that harvest tools are beginning to move out now, and the jobbers report that the business outlook in this department is very good. There is also a better demand for seasonable spring lines.

Spray Pumps.

Though the caterpillar invasion has not been by any means as bad as at this time last year, there has been a good demand for spray pumps, and one jobber reported that the sales in this line had been fully as large this season as last year.

Fishing Tackle.

The holiday trade in fishing tackle was exceptionally good, and many parties were outfitted for their annual Victoria Day jaunt to the streams and lakes of the province.

Rope, Twine, etc.

A good volume of business continues in all lines of rope, and it is likely to be so all summer, as the shipping trade here takes large quantities right along. There have been no changes in prices, which are quoted as follows:—Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are:—Best Manila, 650 feet to pound, 13½c; Manila, 600 ft., 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

Stoves, etc.

Though there have been no price changes in stoves or enamelware, there has been a good steady demand for some lines. Gas stoves and oil stoves are moving very well, and there has been a good movement of kitchen enamelware of all kinds.

Nails and Screws.

Nails are still quoted at $2.20 base for steel wire nails, and $2.60 base for cut nails. There has been a firm market for some time, and an advance is looked for in the near future. Screws are now about as cheap as they will be, and there does not seem to be any immediate prospect of a change in prices. The prices quoted in the current market quotations are still in effect.

Lead and Lead Waste Pipe.

The price is unchanged and the demand fair. Lead pipe is quoted at 7½ cents, and lead waste pipe 9 cents, with discounts of 7½ per cent.

Bar Iron.

The market for bar iron continues firm, and the price of $2 to $2.05 base, Montreal, is unchanged.

Metals.

The weakness that has characterized the metal markets for the past few weeks still continues. One of the leading jobbers, in commenting on the situation, said the market was not only weak, it was sick. He hoped, however, soon to see an improvement. Another decline in the price of tin went into effect this week, and the quotation is now 40 to 40½ cents per pound. Antimony is still quoted at $8.50, and spelter at $6. Copper remains at $16. Lead is slightly firmer at $5.25. Solder quotations are given as follows:—Tinker's bar, 28c; wire solder, 25½c; half-and-half, 24½c; wiping solder, 20 to 30c.

TORONTO.

TORONTO, May 28.—Business continues fair in most lines. Some complaints are heard, but they are comparatively few in number. Conditions on the whole compare favorably with this period of last year.

A noticeable lessening of small orders from the extreme West is noticeable. The retailers there are apparently going slowly and making their purchases in small quantities which are procured at their nearest jobbing centre.

Some factories are not running at full time, but in many cases they ran late last fall and consequently large reserve stocks are on hand.

No complaint is heard on the score of collections and the general feeling is that things are brightening up.

Nails.

The ruling price is now $2.25 base, and a further advance before long would not be a surprise to those who keep closely in touch with the nail situation. Copper rivets and burrs have changed in price, and are now quoted by Toronto jobbers at 35 and 12½ per cent.

Rope, Twine, Etc.

Jobbers in cordage lines all report a very good business the past week. The demand due to the opening of navigation still holds and is further supplemented by heavy orders for binder twine of which large quantities are being shipped to country dealers.

Toronto quotations are as follows:

Best Pure Manila	15c lb. base.
British Manila	11c lb. base.
African Hemp	11c lb. base.
Sisal Rope	10½c base
Lath Yarn, Single	9¾ lb.
Lath Yarn, Double	10¼ lb.

Binder twine prices are:—650-ft. twine, 13½c lb.; 600-ft. twine, 11c lb.; 550-ft. twine, 9¾c lb.; 500-ft. twine, 9¼c lb.; ⅛c per lb. allowance on 5 tons and over; ¼c lb. allowance on 10 tons and over; delivery allowed on 300 lbs. and over.

Old Materials.

The following prices are being paid, f.o.b. Toronto, on old materials:—

Tea lead, package	2½ to 3½c lb.
" " chest	3c to 4c lb.
Lead (heavy, pipe, etc.)	3c to 4c lb.

Brass, heavy .....8c to 9c lb.
Brass, light .....7c to 8c lb.
Zinc, heavy .....3c to 4c lb.
Copper, heavy .....10c to 11c lb.

Rubbers, such as old rubber, boots, and shaes, according to trim, 5½c to 6½c lb.; overshoes, lumbermen's rubber boots, etc., 5c to 6c lb.; auto tires, etc., 4½c to 5½c; bicycle tires, 2c to 3c.

Iron Pipe.

No change has occurred in iron pipe, although some dealers looked forward to a rise by this time as a result of the new tariff. However, as an infinitesimal amount of pipe over the four-inch size is manufactured in Canada, the effects of the tariff may not be very far-reaching.

Cement and Firebrick.

Cement and firebrick remain unchanged and business is good.

Stoves, Etc.

An unusually good demand for summer stoves is noticed. The representative of one very large manufacturer of gas stoves states that in one of their most costly grades their stock only figures to seventy-five per cent. of their orders.

A very good demand is noticeable in oil stoves also.

Metals.

The metal markets are unchanged except for the slight raise in tin. Toronto quotations are as follows:—Tin, 35¾c to 39c lb.; lead, $4.90 to $5 per 100 lbs.; copper, 15c to 16½c lb.; antimony, 8¾c to 9c lb.; zinc, 5½c to 6c lb.; ingot brass, red, 13c to 15c lb.; ingot brass, yellow, 12c to 14c lb.; half-and-half solder, 24c to 26c lb.; pattern aluminum, 22c to 24c lb.; ingot aluminum, 18½c to 19½c lb.; acme solder, 19½c lb.; easy wiping solder, 20½c lb.; star extra, 21¾c lb.; wire solder, 27c; tinkers' bar solder, 28c lb.; lead wool, 8c lb.

Bar Iron.

No change has taken place during the past week, and Toronto jobbers are quoting bar iron at $2 base, f.o.b., Toronto, and $1.90 base, f.o.b., factory.

Quotations on Furs.

Toronto fur dealers are quoting the following prices for Ontario furs:—Skunk, prime, extra large, $1.50 to $5; muskrats, spring, extra large, 65c; large, 55c; medium, 40c; small, 25c; weasel, No. 1, extra large, $1.50; No. 1, large, 85c; No. 1, medium, 50c; bear, No. 1, extra large, $22; No. 1, large, $17.50; No. 1, medium, $13; No. 1, small, $8; cubs, $2 to $12, as to quality. Mink, No. 1, extra large, $6 to $8.50; No. 1, large, $4 to $7.50; No. 1, medium, $2.25 to $5. Fox, No. 1, extra large, $8 to $12; No. 1, large $6.50 to $10; No. 1, medium, $2.25 to $5; No. 1, small, $1.75 to $4.

LONDON.

LONDON, May 21.—Owing to the continued warm weather business in the hardware line here is excellent. Saturday was a record day for the retail hardware stores, making a fine ending to a busy week.

Turpentine Advanced.

Turpentine has advanced locally two cents per gallon and is quoted in single barrels at 67c per imperial gallon; 2 to 4 barrels at 66c per gallon; less than barrel, 74c per gallon.

Linseed Oil.

No change has taken place in linseed oil quotations and the following prices are still in effect:

Raw Linseed—
1 to 2 barrels ..... 63c gallon
3 to 5 barrels ..... 62c "
6 to 9 barrels ..... 61c "
Boiled—
1 to 2 barrels ..... 66c "
3 to 5 barrels ..... 65c "
6 to 9 barrels ..... 64c "

Less than barrel lots—Raw, 70c gal., and boiled, 73c gal.

Wire Nails.

Wire nails are quoted at $2.25 base, f.o.b. London; cut nails are quoted at $2.70 base, f.o.b. London.

Scythes.

There is a good demand for scythes and snaths. Scythes are quoted as follows: Cast steel, $6.50 per dozen; clipper, $8 per doz.; cutlery steel, $9 per doz.; brush, $7.50 per doz. Snaths are quoted: No. 1, $12 doz. list; No. 2, $11 doz. list; No. 3, $10.50 doz list; No. 2|0, $12.50 doz. list, all subject to discount of 30 per cent.

Bar Iron.

Bar iron is quoted locally at $1.95 base; sash weights, solid, $1.50 per 100 lbs.; sections, ½-lb. $2.25 per 100 lbs.; sections, 1-lb., $2 per 100 lbs.

Spraying Materials.

There is a good demand for spraying materials including paris green, arsenate of lead, etc.

Arsenate of lead is quoted as follows:

Paste Form—	Per 100 lbs.
1-lb. bottles	$17.50
2-lb. bottles	15.00
5-lb. bottles	12.00
25-lb. irons	11.00
50-lb. irons	10.50
100-lb. irons	9.75
200-lb. kegs	9.60
300-lb. kegs	9.50
Dry—	
1 lb.	30.00
5 lbs.	26.00
10 lbs.	24.00
25 lbs.	20.50
100 lbs.	19.00

WINNIPEG.

WINNIPEG, May 26.—Wholesalers find business only fair, though retailers have not much to complain about. Hardware and Metal's western editor has just returned from a visit to Saskatoon, Edmonton, Calgary and Regina, including many smaller places. To him the hardwareman seemed to be doing as well, if not better, than the rest of the retailers. In the smaller towns business was rather brisk. Saskatoon hardware merchants have had as hard a time as any. Business in Edmonton was good, but not so brisk in Calgary.

A Winnipeg wholesaler reports this week that money is not coming in at all well. This has only been the case within the last two weeks. This firm found that in the early part of May hardware merchants were in a position, many of them, to take advantage of cash discounts. More were doing this than was the case a year ago. A sudden change took place in the middle of the month, and for the latter half collections were worse than they have been for a long time.

One of the chief demands recently has been for lawn and field fencing, for poultry netting, and for barbed wire. This is the fencing month, seeding having been completed. Trade in thresher supplies is expected to be heavy this season. One firm has deemed it necessary to publish a special thresher catalog. Not much is being done yet in agricultural tools, and will not be until the crop arrives.

A wholesaler in Winnipeg was surprised to learn from the Western representative of this paper of the effect the paint up, clean up campaign had in various Western cities. In Moose Jaw the idea was taken hold of with enthusiasm by the people, the press, and the city. One firm reported their sales doubled compared with last year. The demand was chiefly for garden forks, rakes, shovels, garbage cans, and paint. Before the campaign had run four days there was not a fork left in any hardware store in the city. Hardware merchants were going around trying to borrow from fellow merchants. The demand was so great, even the wholesale houses in Regina were cleaned out. By Thursday, merchants were having to disappoint people who asked for forks. Supplies have been secured since, but the habit has gone, and forks are not called for now. The campaign made a marked impression on Moose Jaw.

Building Supplies Slow.

While the total building permits in Winnipeg are soaring towards the ten million mark, very little is doing outside the city. The result is that business in building supplies is only moderate. Tra-

velers report that retailers in the country are not buying building supplies. Roofing is only selling fair. Wire cloth is selling well, as is usual at this time of the year.

Price Changes.

Of price changes this week, the most important are as follows:—Bar iron has been reduced to $2.50 base f.o.b. Winnipeg. It was formerly $2.75. Band iron is down 25c. each size, in sympathy with the American markets. Crowbars are $4 this week, a reduction of 50c. per cwt. There is a new price on wire nails —$2.40 Fort William and $2.80 Winnipeg. These follow changes in the East.

Sporting Goods.

Tennis and baseball goods have the markets at present, sharing it, though, with fishing tackle. Despite hard times. people will fish. Either there are more Isaac Waltons or fish are biting better, for trade in this line so far has eclipsed every preceding year. Particularly good is the fishing tackle business in northern British Columbia. As for baseball goods, the demand is very heavy.

More and more hardware men are taking over sporting goods into their business. It is a line that brings ready cash, which speaks loudly just now when neither the farmers nor anybody else are paying little cash for other lines. Baseball clubs usually have money at the beginning of the season to purchase their supplies. It is at the end of the season when they are broke. So it behooves hardware men to get cash for all goods supplied to baseball clubs.

Tents and Hammocks.

There is quite a brisk demand for tents and hammocks, and the extent to which these sell will depend much on the weather. If it is very hot, the demand should be there. One of the largest dealers in this class of goods in the city of Moose Jaw was telling Hardware and Metal's representative that Moose Jaw and other southern towns were not good for this class of business, owing to the scarcity of shady trees. More people, he said, are spending money on wire screens for the veranda to keep out the mosquito, and are introducing blinds which pull upwards. There should be a big demand for screen doors in Moose Jaw.

There is only one change of price in the sporting goods line. Discount on Dominion cartridges 22 long rifle, both black and smokeless, is now 40 per cent.

Paints.

Dealers throughout the West report that this has been a good year for paint, due principally to way in which the clean-up, paint-up campaign has been taken hold of everywhere. A dealer was saying this week that he started the season by buying in small quantities, but had been sending in repeat orders over and over again. He attributes the large amount of painting done to the fact that the householder has had more time in which to do it.

WEDDING GIFT WINDOWS THAT BRING RESULTS.

(Continued from page 51.)

The entire bottom was next covered with red sateen and red velvet was used to drape over the stands and across the bottom.

The window was then ready for the cutlery, which was placed so that a good view of every article was possible, and a small price card put on each case.

Cut glass and silverware also make very fine displays and when this cutlery display was in, a very effective display of cut glass and silverware was made in another window.

The same background idea was used and the same colors were used as in the cutlery windows. The two displays made a very effective showing, especially at night with the extra frosted lights on the background.

SUCCESSFULLY OPERATING A MOTOR DELIVERY.

(Continued from page 40.)

needs tightening, or anything whatsoever seems necessary to be done, it is looked after then. This very often prevents more serious trouble developing. In a smaller town where the agent might not be equipped to do this work, or where there may not be an agent, I think it would be well to have the chauffeur, who is usually a practical machinist, or at least understands the vital parts of the machine, make an inspection of the car every week. He could see if the carburetor is dirty or if some parts needed oiling or adjusting, and in this way help to keep the car in perfect running order. Many hours of delay might be saved and the repair bills kept down if this were done."

MEETING AT TORONTO.

The advisory committee of the Ontario Retail Hardware and Stove Dealers' Association met in Toronto this week in conference with the officers of the Retail Merchants' Association. Matters in connection with the proposed affiliation of the two bodies were discussed, and it is likely that within the next few weeks members of the Hardware Association will have an opportunity of voting on the question of affiliation.

Clothes Reels.

The Johnson Hardware Co., Fort Frances, Ont.—"Kindly inform me where or who manufactures clothes reels that can be folded up when not in use."

Cummer Dowswell, Ltd., Hamilton, Ont.—Ed.

Drinking Fountains.

R. T. Holman, Ltd., Summerside, P.E.I.—"Will you kindly give us names of manufacturers of sanitary drinking fountains for store use?"

Jas. Marrison Brass, Co., Toronto; Empire Manufacturing Co., London, Ont.; the James Robertson Co., Toronto; Pure Sanitary Drinking Fountain Co., Haydenville, Mass.—Ed.

Lawn Mower Grinders.

Geo. B. Jameson, Melfort, Sask.—"Please give us address of firm manufacturing lawn mower sharpeners."

Taylor Forbes Co., Guelph, Ont.; R. Woon & Co., Oshawa, Ont.—Ed.

Penn Esther Stoves.

D. Kennedy, Stratford, Ont.—"Kindly advise me where I could get repairs for shaker grate for a Penn Esther cook stove."

Record Foundry Stove and Machine Co., Moncton, N.B., manufacture the Penn Esther. They will be able to supply repairs.—Ed.

Increase of Capital.

The shareholders of the Medicine Hat Pump and Brass Manufacturing Co. recently voted to increase their capital stock from $50,000 to $75,000.

This was done in order to increase the outfit and keep up with orders.

Geo. W. Elliot, president of the company, reports business in excellent shape.

The new capital was all subscribed by the shareholders of the original stock so that no lack of confidence in their concern is apparent here.

New Firms.

Lawson, Sask.—Beaudurn & Folliott have opened up a hardware business.

Regina, Sask.—A hardware business has been opened up here by M. Donald.

Crystal City, Man.—Report has it that there is an excellent opening in Crystal City for a hardware store.

"CHALCO"

A PAINT AND VARNISH REMOVER
THAT'S 20% MORE EFFICIENT THAN OTHERS
YET COSTS NO MORE

To Retailers, Jobbers and Manufacturers:

We are now able to offer in "Chalco" a Paint and Varnish Remover of unusual merit.

It's 20% more efficient than others.

TRADE CHALCO MARK

The Paint and Varnish Remover

"We pay no royalties to put on your bill."

Sell Varnish Satisfaction to *Your* Customers

Berry Brothers' Varnishes have been giving satisfaction for over fifty years. Varnish users know about them. They know that the dealer who sells and recommends Berry Brothers' Varnishes is giving them honest, lasting varnish values. This reputation helps you sell Berry Brothers' Varnishes.

Berry Brothers' advertising is a salesforce that brings folks into your store. For years we have been telling the public about the high quality of our varnishes. We have educated them to ask for Berry Brothers' goods—to know that our trade-mark stands for varnish satisfaction. Because of this, Berry Brothers' Varnishes are easy to sell.

And the Berry Brothers dealer gets **more** than the profit out of Berry Brothers' Varnishes. They help him to build his business reputation for selling high-grade goods.

If you haven't Berry Brothers' Varnishes on your shelves, let us tell you more about them.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, May 27.—Business has been very good in the paint trade with both jobbers and retailers, and with the fine weather now prevailing there should be a continuance of this condition. Now that the "Clean Up and Paint Up" week is over, it is interesting to note that manufacturers have not had the general co-operation of the retailers in the campaign. Some of the more progressive dealers arranged special window trims for the week and also called attention to the movement through their newspaper advertising. There were so many, however, who apparently took no notice of the affair, despite the fact that it was the biggest kind of an opportunity for them to do a bigger business. One manufacturer went to the trouble and expense of having big cotton banners painted and distributed to dealers handling his product. These banners announced the date of "Clean-up and Paint-up" week and called attention to the fact that this dealer sold paints suitable for the occasion. Some dealers used the banners and profited thereby, and others did not bother to put them up. Another manufacturer found he could not get the retailers to put in special window trims of paint and had to send men around at night to dress the windows for these dealers who would not enthuse or cooperate in making the campaign a success. There is no doubt that a lot of extra paints, etc., were sold as a result of the general agitation for a clean-up, but much more could have been accomplished if the dealers had all entered heartily into the movement. It is to be hoped that next year when the clean-up week comes around these dealers will be more alive to their opportunity. There have been no changes in prices since last report but most of the markets are firmer.

Linseed Oil.

There has been a very fair demand for linseed oil, both raw and boiled. The prices previously quoted are still in effect, as follows:

Raw Linseed—
1 to 4 barrels .....60c per gal.
5 to 9 barrels .....59c per gal.
Boiled Linseed—
1 to 4 barrels.....63c per gal.
5 to 9 barrels.....62c per gal.

Turpentine.

The turpentine market is very firm and though the prices quoted last week have not changed as yet, it is altogether likely that an advence will take place at any time now. There is a better supply now since the arrival of large shipments from the south. It is reported that the crop for this season is pretty well in and in view of the price now asked higher quotations are expected very soon. Sales have been about the average. Present quotations are:

1 barrel ..... 64c per gal.
5 barrels .....63c per gal.

Five-gallon packages, 5 cents advance; packages extra; terms net.

White Lead.

The pig lead market is firm but the quotations for white lead remain at the same figure as given for the past few weeks, namely, $8.05 per hundred for ton lots, and $8.25 per hundred, for less than ton lots.

Glass and Putty.

There has been a very fair demand for glass and prices are unchanged. Quotations are: Star, $3.40 base, net, for country, and $3.65 base, less 5 per cent., city; double diamond, $5 base, net, for country, and $5.40 base, less 5 per cent. for city dealers. Plate glass is subject to a discount of 40 and 5 per cent. off list for country, and 50 and 5 per cent. off list for city dealers.

Gasoline.

Quite a reduction was registered this week in the price of gasoline and quotations now are:

Barrels, in wood .....21½c gal.
In steel and drums .....18½c gal.
Tank wagon, (100 gals.) .....18c gal.

Benzine is quoted at 20½ cents per gallon, in single barrels.

TORONTO.

TORONTO, May 28.—Turpentine went up 2 cents a gallon in the early part of last week, and the tendency seems to be to go still higher. This advance has been explained by a merchant in the trade as having been due to two heavy orders having been placed at Savannah by houses that had to have immediate delivery, regardless of price.

There has been a decidedly bearish tendency to the Savannah market, where stock is being held for higher prices. A scarcity prevails in Toronto. Prices are as follows:—

Single barrels ..... 67c per Imp. gal.
2 to 4 barrels ..... 66c „ „ „
5-gallon lots ..... 74c „ „ „

Ready-Mixed Paints.

Demand for paints in general is excellent, particularly for the last week. One large dealer shows a much larger business for this year than for the corresponding period of last year, and in a lesser degree this appears to be true of the trade in general. Another jobber states that last week showed an unprecedented number of orders.

Linseed Oil.

Oil is unchanged, but weak, and causing some uncertainty in the trade. Sales are brisk and collections good. The only complaint heard is that prices are wobbly.

No changes have occurred since the drop of two weeks ago. The ruling quotations are as follows:—

Raw Linseed Oil—
Single barrels .....63c gallon...
3 to 5 barrels .....62c gallon.
6 to 9 barrels .....61c gallon.
Boiled Linseed Oil—
Single barrels .....66c gallon.
3 to 5 barrels .....65c gallon.
6 to 9 barrels .....64c gallon.

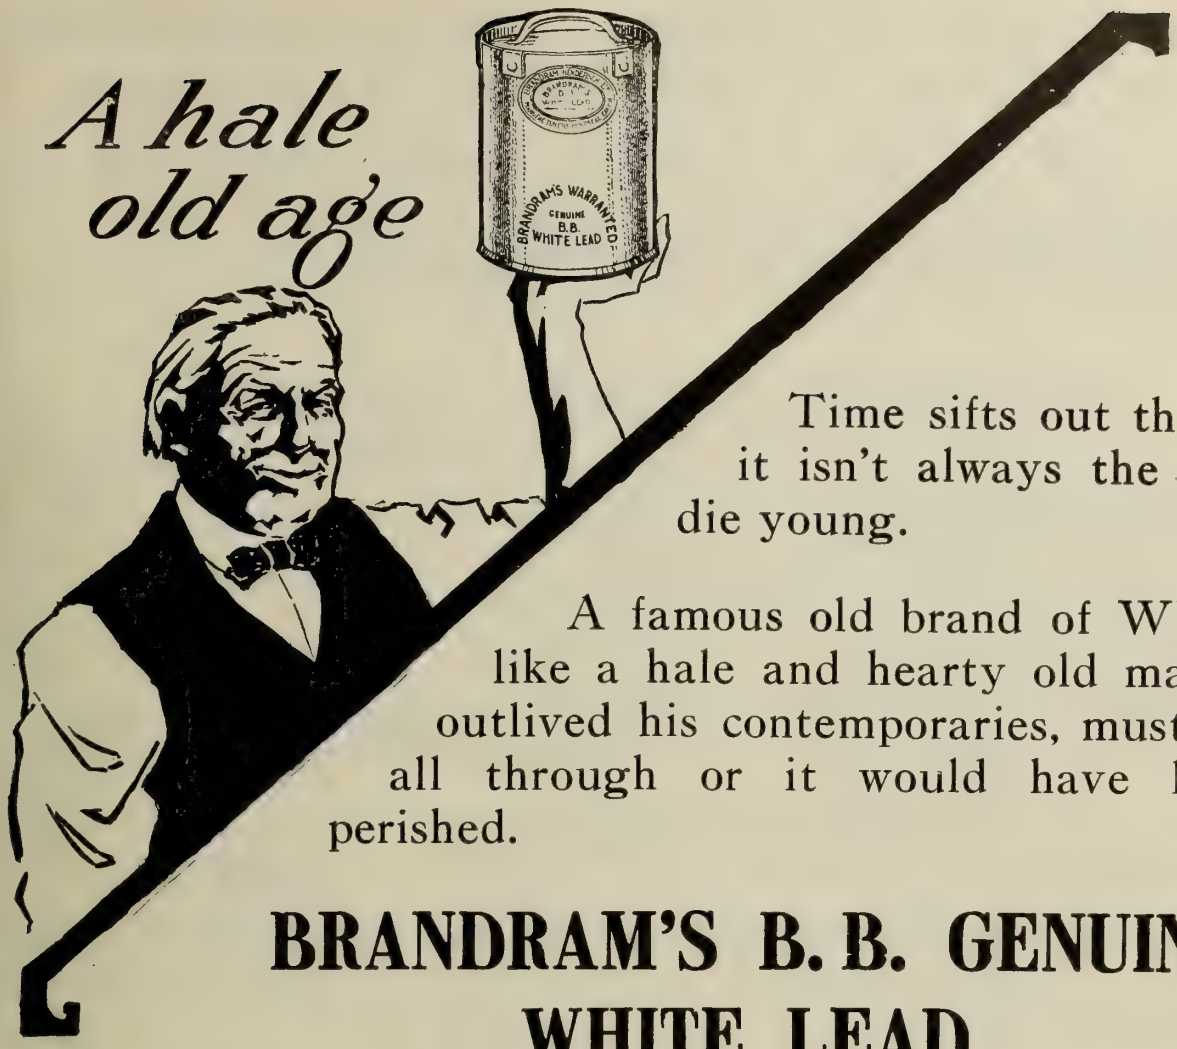
Oil in less than barrel lots, 7 cents per gallon. Cans are charged at: 5-gallon cans, 50 cents each; 10-gallon, 75c each.

Glass.

Glass is only in fair demand at present. A discount of 20 per cent. is being quoted off the $4.25 base for 16 oz. and 25 per cent. off the double diamond list for stock cases. Cut sizes are quoted at 40-10 per cent.

Gasoline and Benzine.

Gasoline has fallen off to 21 cents per gallon, single barrel. Benzine is unchanged at 20½ cents.



White Lead.

Orders for white lead are being accepted for late July delivery. At that time the association will meet and future prices will then be determined. Leading quotations are unchanged. Less than ton lots are $8.40 per cwt., and ton lots at $8.20 per cwt.

DEATH OF W. R. TAIT.

Wm. R. Tait, a Toronto hardware dealer, died recently at his home, 134 Albany Avenue. The late Mr. Tait, who was in his 38th year, went to Bermuda for his health two years ago, but the paralysis from which he suffered had gradually grown worse. Born in Picton, Ont., where he was engaged as hardware clerk for some time, he came to Toronto fifteen years ago, and after traveling for seven years for Lewis Bros., of Montreal, opened a hardware business of his own at 836 Yonge Street, three years ago.

His wife and three small children survive.

Time sifts out the strong—it isn't always the good who die young.

A famous old brand of White Lead, like a hale and hearty old man who has outlived his contemporaries, must be sound all through or it would have long since perished.

BRANDRAM'S B. B. GENUINE WHITE LEAD

has lived and flourished over a century. Other White Leads have come and gone, but Brandram's is to-day stronger than ever because the passing years find no superior to it—nothing better suited to win and hold the esteem of practical men. It is increasingly used because experience only serves to more fully demonstrate its exceptional merit.

As a dealer, you must realize how much this established reputation does for the men who sell Brandram's White Lead. The market for it is ready and waiting.

It is to your advantage to sell Brandram's B. B. Genuine White Lead, and if you will write us, we will tell you how we will make it profitable for you to do so.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

Current Hardware and Metal Quotations

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figure being for large quantities and prompt pay. Large buyers can frequently make purchases at better prices. The editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

Do you know how to build up A Profitable Paint Business?

No doubt you will answer "By selling nothing but the best on the market and satisfying your customers"; but, how are you to know which is the best paint on the market?

Over **half a century** in the paint business puts us in a position to produce paint which we know, and absolutely guarantee to be pure; the kind of paint which will bring your customers back for more, once they have tried it.

"Ready" Roofing and "Black Diamond" Tarred Felt

"Cyclone" and "Joliette" Building Papers

Every progressive dealer should sell these products. They produce a good profit, and are guaranteed to give perfect satisfaction.
They can be easily laid by an inexperienced hand.
Do not restock this kind of goods till you communicate with us and get full particulars. It will pay you.
We also manufacture a complete line of high grade Wrapping Paper, which sells at a low price.

Write to-day.

When Wood Workers Ask for Screws

Be able to supply them with

PAT. FEB. 2, 1909

SEE THAT SQUARE HOLE

ROBERTSON'S SOCKET HEAD WOOD SCREWS

These screws are far superior to any other kind. They have a square hole into which our specially designed driver fits snugly. The driver cannot slip and thus spoil screw heads or material.
We also manufacture high-grade Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.
Drop a card for catalogue.

It's easy enough to talk, but action makes the proof. The offer reprinted below has appeared in Hardware & Metal, Canadian Hardware Journal, and The Painter and Decorator. Besides, it has been widely distributed by us in printed form. Yet there has been no response—no one has taken it up. The offer is still open—if there's a wall finish on the market that will compare with Muresco, here's the chance to prove it.

PROOF MURESCO

Offer has no takers

The Offer

MURESCO, "for Twenty Years the Leading Wall Finish," Accepts Challenge. $100.00 Forfeit. We understand that certain Kalsomine manufacturers are making the statement that their Kalsomine will cover more surface, pound for pound, and cover it better than MURESCO. If by buying a quantity of their goods and MURESCO on the open market and having two master painters—who may be selected by both parties—test them out, they can prove above statement, we will pay $100.00 to Sick Children's Hospital.

A BIG Cement Trade In Your District

Contractors and builders are using large quantities of cement in your district. **Are you getting your share of this profitable business?** The builder who can buy Rogers' Cement at your store will buy all his other lines there also—he knows that the dealer who handles

Rogers' Portland Cement

handles other lines of an equally high standard. The name "Rogers" on a bag of cement marks it as the cement that engineers and architects judge others by—the standard of the building world. Rogers' Cement will increase sales in all of your departments — **and you do not need to tie up capital in a large stock.** We ship immediately on short notice. Write for our dealer proposition.

ALFRED ROGERS, Limited
28 West King Street, Toronto

N. J. Dinnen'& Co., Western Sales Mgrs.
Winnipeg, Man.

THE SHOTS THAT HIT ARE THE SHOTS THAT COUNT

and the paint sales that hit the entire satisfaction of the consumer are the sales that count in making him your permanent customer. The first sales of MAPLE LEAF PAINTS AND VARNISHES will prove this to be a truth. It is also well to remember that

BIRD SHOT NEVER BROUGHT DOWN AN ELEPHANT

A few scattered qualities in a paint won't catch the public at large. Any successful paint proposition must have every essential quality so superlatively strong that its service will hit and count every time a can is opened and used.

MAPLE LEAF Paints & Varnishes

MAKE GOOD BECAUSE THEY'RE MADE GOOD

They hit and count for more business every time you sell a can.

M L FINISHES THAT ENDURE QUALITY

If you are aiming to shoot straight for better paint business, you will write and let us explain our Maple Leaf Proposition in detail.

SHERWIN-WILLIAMS PAINTS

For all kinds of Good Painting

Did you ever realize the number of people who read Sherwin-Williams bulletin boards each day?

These boards are situated along Canada's railroads near the large cities, where they are read by thousands of people. In this way the Sherwin-Williams Co. are keeping their name and trade-mark before the buying public with the result that the sale of Sherwin-Williams Products is increasing steadily year by year.

Are you sharing in the profits of this steady increase? If not, start now.

SHERWIN-WILLIAMS PAINTS & VARNISHES

A FINISH FOR EVERY PURPOSE

THE SHERWIN-WILLIAMS Co. of Canada, Limited: Montreal, Toronto, Winnipeg, Calgary, Vancouver, Halifax, N.S., London, Eng.

SELLING THE LEADERS

Easy profits come from handling leaders — the goods that, at the moment, are accepted generally as the best of their class. A leader is our

GREYHOUND GLASS CUTTER NO. 300

Its selling force lies in the fact that it is a really first-class tool, yet is offered at a popular price—an irresistible combination. A feature of this Cutter is the unusual temper of the cutting wheels, which have a cutting capacity far in excess of that of other Cutters offered at or about the same price.

You would have no trouble in selling these Cutters because they offer an exceptional value.

Write us, and we'll send details and a copy of our New Dealers Catalogue.

The gathering of the clans

"On to Toronto!"

YOU have doubtless noted with gratification the great movement for honesty and square dealing which is revolutionizing American and Canadian business methods. Our goods, our salesmanship and our advertising are being cleansed and vitalized by the spirit of truth and sincerity.

As a result, we see a growing public confidence in manufactured products and their advertising — a confidence which, if preserved and fostered, will decrease our costs, increase our profits, and become a business asset of incalculable value.

Foremost in the fight which has brought about this revolution stand the Associated Advertising Clubs of America, whose emblem is shown above. If you are a business man, interested in the manufacture, distribution, or selling of commodities of any nature, you should attend the Tenth Annual Convention of the A. A. C. of A. at

TORONTO

June 21-25, 1914

At this Convention you will hear the inspiring story of the manner in which these tremendous reforms are being effected. More than this, you will hear the problems of distribution, merchandising, salesmanship and advertising discussed by able and successful business men, in a series of open meetings.

These meetings will cover the questions of chief interest to the 10,000 business men comprising the 140 clubs of the A. A. C. of A. —*your own* problems included.

EDWARD MOTT WOOLLEY, the famous writer on business topics, has written a booklet entitled "*The Story of Toronto.*" This booklet describes in a forceful, intensely interesting manner, the wonderful work the A. A. C. of A. are doing for clean advertising and square business methods, and the significance and importance of the Toronto Convention. This booklet will be sent free to all business men asking for it on their business stationery—together with detailed facts as to the convention programme and rates for accommodations.

The Joy of a June Bungalow Home

Summer days in a bungalow, whether in the city or country, are always pleasant.

June MacLean's carries a well-illustrated article on attractive Bungalow construction. The plans contain many ideas of eminent use to the family at this time when plans are being perfected or made anew for the summer living.

The suburb's life in a bungalow all the year round is also a proposition worth considering. This article is by one who has been asked to edit the Government bulletin on the subject and so is authoritative.

There are, besides, a full list of extra choice subjects, all well illustrated for this month. The Review of Reviews is particularly good, giving you the best from the world's periodicals.

Here are some of the other leaders of the June issue:

Nationalizing Medicine.
Boss Bowser of British Columbia.
A Waltz to Fortune.
Efficiency in Business.
The Ulster Leader.
Five Short Stories.

Send us a postcard and have your name placed on our subscription list.

Subscription $2.00 a year. *Twenty cents a copy.*

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and a clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTER. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.

Made for Brace—made for Machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

No. 1902. Brass.
No. 130. Tinned.
3 sizes.

"HENDRYX"
A WORD FOR QUALITY

PARROT CAGES

The season is on for parrots. For the next three months young parrots are in great demand. The "HENDRYX" cage has never been equaled. Every wire being riveted to each rail affords positive security for keeping the birds.

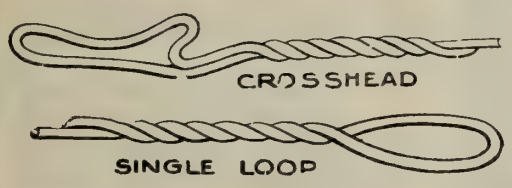
Increase Your Cutlery Sales *by selling One Brand of Acknowledged Superiority*

H. BOKER & CO.'S "TREE" BRAND



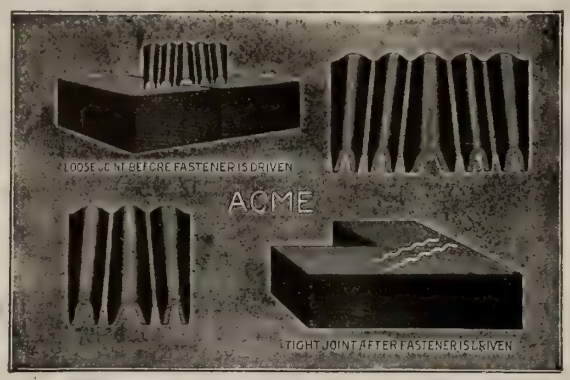
Is Cutlery which gives Full Satisfaction, and Holds Your Customers

"Tree" Brand Cutlery is far superior to other cutlery, will give more satisfaction than any other make, and is gunarateed. This beautiful razor is one of Boker's skill in razor making. Ask your jobber to show you "Tree" Brand Cutlery.

FOR SALE BY ALL LEADING WHOLESALE HARDWARE FIRMS

WIRE BALE TIES

Our wire, for baling hay, is made from the finest quality Bessemer Rods, and is 10 per cent. stronger than any other baling wire.



This is the line that brings the dealer clean, satisfactory profits with every sale, as it is not the come-back kind.

Get our prices and send us a trial order—we guarantee to satisfy.

We also recommend our WIRE NAILS and STAPLES as inferior to none.

What Do You Earn?

Don't think us impertinent. We want you to put the question to yourself, and to supplement it with the further question, "Could you earn any more?"

Certainly you could, if your wasted evenings could be used to advantage.

Why not let The MacLean Publishing Company help you out? They will appoint you circulation solicitor in your district for MacLean's Magazine.

When you have tried it you may find it pays you well enough to give your whole time to it. That has been the experience of many before you.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

When writing advertisers kindly mention having seen the advertisement in this paper. : : : :

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

EMPIRE FOOT-POWER GRINDERS

Made in Canada

Empire Foot-Power No. 2 Grinder, with Drilling Attachment.

No. 3 Empire Foot-Power Grinder, without Drilling Attachment.

The most powerful Foot-Power Grinder on the market; has set of roller bearings and cut gear; wheel 8" x 1¾"; 300 revolutions per minute attained by a simple and easy movement of the foot.
For Grinding Drills, Castings, Machine Parts, and Tools of all kinds.
The Drilling attachment with drill holes up to ¾".

Catalogue on request. **Every Machine Guaranteed.**

Manufactured by

THE ADAMITE WHEEL & MANUFACTURING CO.
Hamilton, Ont.

How we help you sell more

YALE

Padlocks—three big helps!

LIVE ADS for NEWSPAPERS

Advertisements that will get attention and hold it until you have said your say. In plate form all ready to print, or just the pictures, as you prefer. The use of these advertisements will bring new and old customers into your store.

MAGAZINE ADVERTISING

The magazines each month carry the Yale story into the homes of those whom you sell. We are making the name "Yale" a selling force for you. Nothing on your shelves is better known and more highly thought of by the trade you seek than Yale Products. Our advertising has been largely responsible for this.

ATTRACTIVE CAR CARDS

Signs for your street cars, playing up the Yale goods you sell, have a wonderful trade-pulling power. They catch the man who needs a lock, a night latch or a door closer going and coming and send him to your store. They make our *national* Yale advertising a *local* Yale advertising. We'll furnish the cards if you'll furnish the street cars.

Three other important ways in which we help you to sell more Yale Products are with Window Displays. Clever Lantern Slides, and Display Boards. Ask our Dealer's Advertising Service to send you detailed information about any or all of the above.

Canadian Yale & Towne Limited

Makers of Yale Products in Canada: Locks, Padlocks, Builders' Hardware and Door Closers.

14 Years A Dealer But Finds No Better Fence Than PEERLESS

Read This Letter

Forestville, Ont., Jan 13, 1913

The Banwell-Hoxie Wire Fence Co.,
Hamilton, Ontario

Dear Sirs:—I have been in the fence business for the last fourteen years putting up fence for farmers and have erected as high as four thousand rods per year. I have put up a good many different makes of fence but can positively say that "The Peerless" has given the best satisfaction taking into consideration even wire, no slack wires, no wires breaking, no wires rusting, and fence holding its tension which keeps the fence tight. "Peerless Fence" that I put up six years ago with posts thirty feet apart is tight and free from rust and does not sag.

Truly yours, E. G. Hooner

He's but one of the thousands of satisfied Peerless dealers—satisfied there's no better, no more profitable, no bigger producer of return orders than Peerless Fencing. His Peerless Fence agency is one of his biggest assets. If you had it you would say the same.

Peerless Farm Fence

is made of Open Hearth steel wire—heavily galvanized in such a thorough manner that it will not flake, chip or peel off. The wires are tough, elastic and springy and will not snap or break under sudden shocks or quick atmospheric changes. The joints are securely held with the "Peerless Lock" which will successfully withstand shocks and strains and yet, it can be erected on the most hilly and uneven ground without buckling, snapping or kinking. We also build a full line of poultry fence, ornamental fence and gates.

We Offer You This Coveted Agency

If you are located in our unassigned territory, we want to offer you the selling rights for this remarkable fencing. We want to add you to our list of satisfied, money making agents. We have a very attractive agency proposition. Want it? A postal brings it. Write today—now.

No Getting Away From It

The Kling Hame Fastener holds customers as well as horses. Anyone can attach it in a minute. Keeps the collar uniformly tight at all times. No matter how he lunges, the horse can't open it or break it. We refund the money for any that may be returned to our dealers. Costs you $2.25 a dozen from any jobber.

Look for "Kling" on the lever. Circular on request.

CHICAGO STEEL BENDING BRAKES

(Made in 200 sizes)

If you are in the market for a Bending Brake apply to us for catalogue and price list.
There is no use trying to get along with antiquated tools.
To be successful you must be up-to-date.
The Steel Brakes do the largest variety of work with accurate results.

The Steel Bending Brake Works Ltd., Chatham, Ont.

The Reason Why

No. 32 Torch

mechanics call for a "C. & L." Fire Pot or Torch is because they give perfect satisfaction. For the past twenty-five years they have sustained a high reputation for quality and service. The No. 32 Torch has no equal where intense heat is desired. The burner is made of special generator metal that holds the heat longer. The tank is of heavy drawn brass, reinforced and fitted with the "C. & L." automatic, patented brass pump, producing the required pressure quickly and easily.

All leading jobbers will supply at factory price. Send for Catalog—it's free.

Clayton & Lambert Mfg.Co., Detroit, Mich., U. S. A.

Corn and Bean Planters

King of the Field is the best two-hand planter in the market. Is also made with Pumpkin Seed attachment. We also make lace curtain stretchers, ironing boards, step-ladders, step-ladder chairs, etc.

STANLEY

WROUGHT STEEL
SCREEN DOOR BUTTS

1751 Full Size

1753 Full Size

These ornamental wrought steel loose pin butts conform to the same high standard of excellence maintained by other Stanley Products.

They are applied to the surface of the door, thus saving the time required in mortising. Their finished appearance adds greatly to the attractiveness of any entrance.

When the butts are once applied it is not necessary to remove the screws. By merely slipping out the pins the door is easily taken off and can be as readily re-hung when necessary.

These butts can be furnished in Japan, Antique Copper, Dull Brass or the anti-rust "Stanley" Sherardized finish for outdoor work or damp climates, as it absolutely prevents rust.

Packed One-Half Dozen pairs in a box with screws. Weight per dozen pairs with screws: No. 1751, seven pounds; No. 1753, five and one-quarter pounds.

Do not delay ordering at once from your Jobber, for it's time your order was placed for screen door butts. If he cannot supply you, **we** will **quickly** do so.

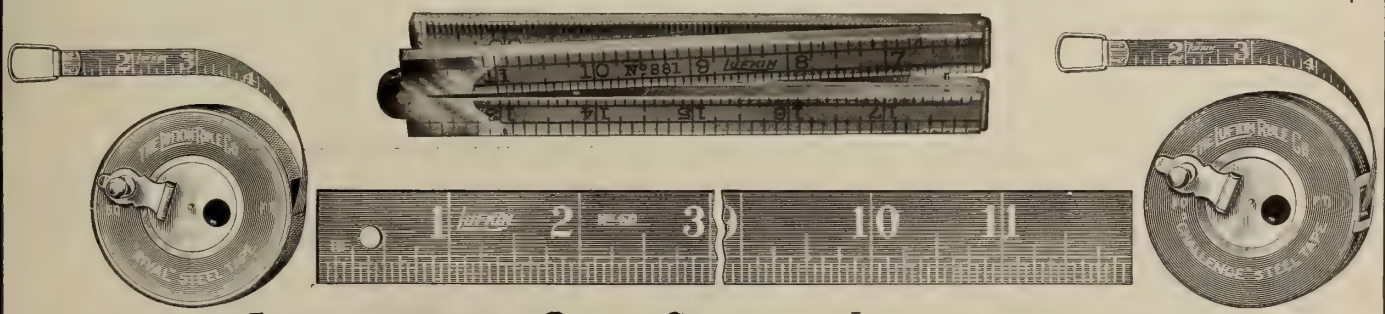
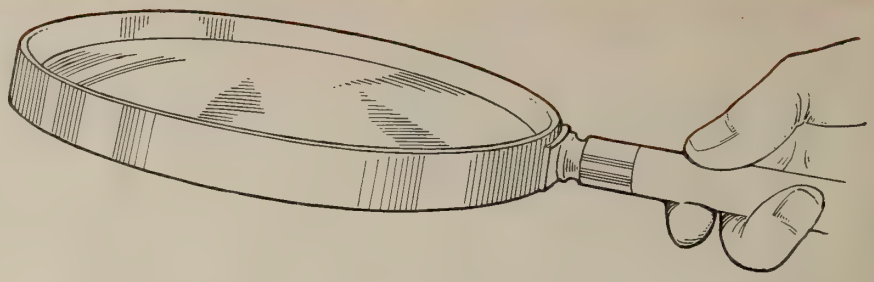
THERE'S MORE SELLING ARGUMENT IN THE NAME **LUFKIN** THAN YOU EVER NEED TO SELL LUFKIN GOODS



LUFKIN Measuring Tapes and Rules

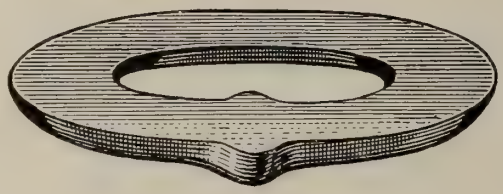
Are Canadian Made and are on sale at practically every prominent house in the country stocking such goods.

THIS IS THE SIMPLE EXPLANATION: Dealers stock the line that will sell and will bring customers back. CUSTOMERS buy the line in which they have confidence.



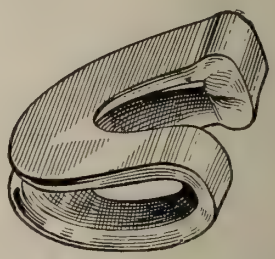
THE OPINION OF THE LARGE MAJORITY MARKS THE SAFE COURSE.

Stock LUFKIN Goods



THE LUFKIN RULE CO. OF CANADA, LTD. WINDSOR, ONT.

Inside Information on Electric-Welding



Test No. 1. Take a link of McKinnon electric-welded chain, saw it in two and examine the welded junction under a microscope.

You will find it exactly the same fibrous condition of material at the weld, that will be found at any other part of the chain link.

The chemical union of fibre is absolutely perfect and were it not that the swell (design patented) shows the junction point, it would be impossible, otherwise, to ascertain the point of welding.

Test No. 2. Take the half link, bend the ends back in a vise until they meet and examine the weld again, to find that this severe test has been withstood perfectly.

Test No. 3. Order McKinnon Electric-Welded Chain and try it for any use. It's made in Canada at St. Catharines, Ont.

ON EVERY SIDE

Many of the hardware dealers in this good land are literally surrounded by boat-builders. Some are building for the fun of it—some, for their daily bread. All of them will need hardware and so will be glad to use

McKINNON BOAT TRIMMINGS

They are carefully made and you can sell them with confidence, for they will give perfect satisfaction. The boat-builders are about ready to buy our locks, rudder hooks, painter clips, etc. It's time to order. Write us at once.

A Confidential Chat With Our Readers

AS we go to press this week we are just completing arrangements for an important new editorial service of which full particulars will be given in next week's issue.

For years past we have noticed an increasing interest among our readers in the articles we have been running, dealing with the question of retail hardware advertising.

The trade generally are thoroughly alive to the fact that a retail business, if properly advertised, must grow just as do manufacturing firms who have solved the advertising problem. That a small retail store in a Western Ontario town was transferred to Toronto and in a comparatively few years has grown into the greatest mercantile success in Canada has not been lost upon retail merchants generally who recognize in advertising the great energizing force which has placed the great business referred to where it is to-day.

And, right in the hardware business there are many instances of conspicuous success being achieved by retailers who knew how to advertise their stores and the goods they handled. In Toronto there is a store by no means pretentious in its appointments which has nevertheless a very large and profitable turnover. Not long ago, this store was a pretty small establishment, occupying a basement on King St. If you ask the proprietor to explain the secret of his success he will tell you that it is due principally to judicious advertising.

In many other towns and cities similar instances will be found if hardware merchants who have won a commanding place in their neighborhoods and established a large and paying business as a result of their carefully-planned advertisements.

The Hardware Style of Advertising.

It has been Hardware and Metal's privilege to study the methods of retail hardware advertising in every part of Canada, and many times we have reproduced in our pages advertisements which have pulled big business for the merchants in whose behalf they were inserted.

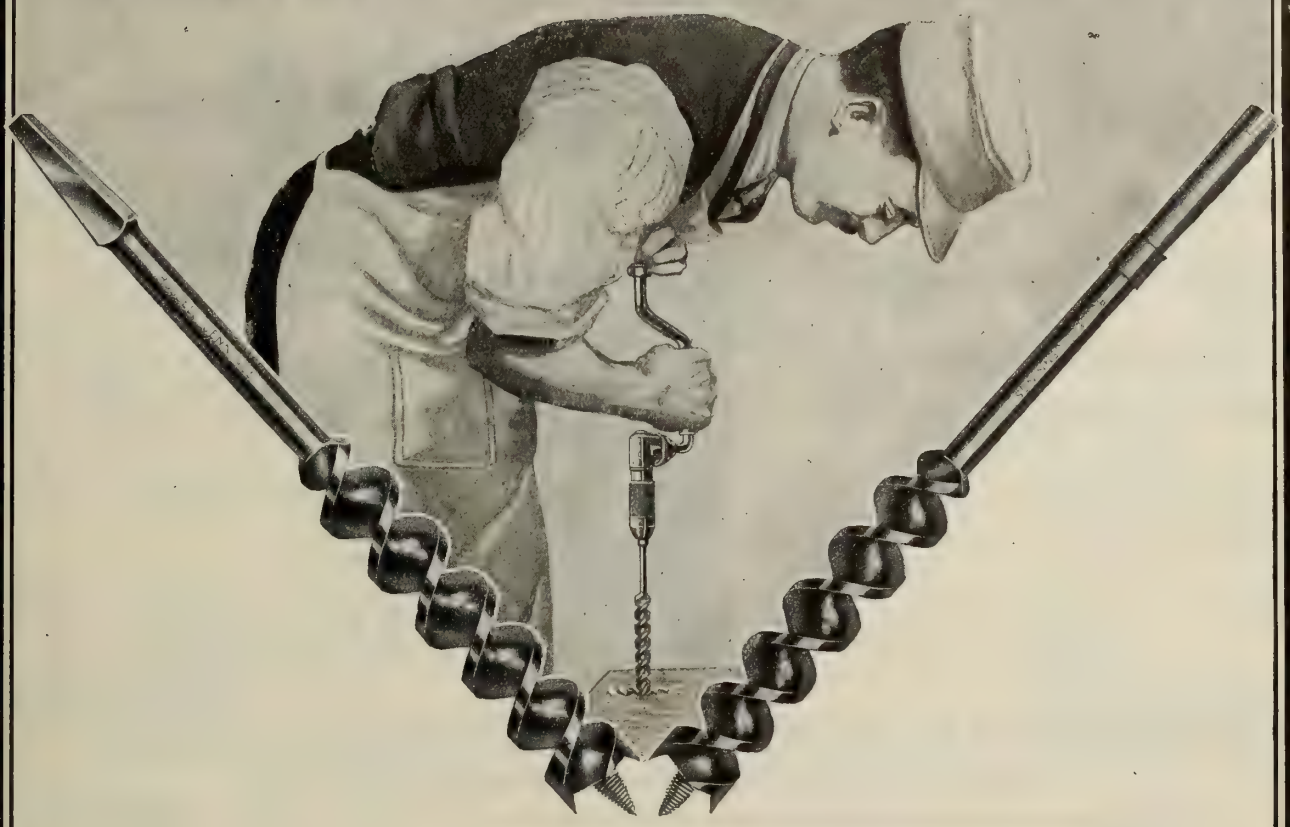
In analyzing these business-getting advertisements, we have found that they all had one big idea in common — whether the merchant lived in Halifax, Vancouver or London. This idea showed itself so plainly in good hardware advertisements and seemed to be so exclusively a hardware idea that we feel justified in speaking of "the hardware style of advertising."

The idea was to do away with generalities and get down to "brass tacks." It was done by devoting practically the whole space of the advertisement to a series of illustrated talks on certain definite articles and quoting a definite price for the article. By using small cuts, a great many business propositions could be put forward in small space, and the advertisement thus stood a better chance of making a definite impression on a greater number of people.

To Make an Advertisement Sell Goods.

And just here let us say that if it is desired to do something more than create publicity—that is, if it is to actually sell specific articles an advertisement must put up a business proposition, and that involves a description of the article, illustrated if possible, and the quoting of prices.

You do not expect your salesmen to sell goods without quoting prices. Isn't it too much to expect an advertisement to make sales if it is silent in the important question of price?



The hardwaremen who know their advertising is paying them are those who make each piece of copy a printed salesman, showing readers what the goods look like, describing their principal features, and quoting the price at which they are to be sold.

Hardware and Metal's Electro Service.

To attract attention it is important that a hardware advertisement should be illustrated, and to make the best possible use of the space paid for, these cuts must be both clear in outline and small in size. Such cuts are very difficult to secure at a reasonable cost.

After consulting with hundreds of our readers as to the need for small advertising electros, we are convinced that the trade will heartily welcome any opportunity of purchasing hardware cuts at a cost which will enable them to secure a full series, illustrating staple hardware articles.

We have spent a great deal of time in preparing a large assortment of such electros, and will have everything in shape to make a full announcement in our issue of June 13. Watch for the two-page advertisement in which this latest branch of Hardware and Metal's service to the retail trade will be set forth.

Russell Jennings

AUGER BITS

Are Now Made in Canada

The well-known Russell Jennings Auger Bits are now a Canadian product. The growth of our Canadian business has resulted in the establishment of a factory at St. Catharines, Ont.

The Russell Jennings Auger Bit is just as firmly established as the standard for fine work among Canadian workmen as among men in the States. We hope the advantages of increased service and better price now possible with our new factory will still more firmly establish our product with Canadian dealers.

At this time we want to call to the attention of all Canadian hardware dealers our carpenters' bit for general all-around use. This is made with a quick-boring thread and has an oil finish, making it well suited to general work. The highly polished fine thread Russell Jennings Auger Bit will always remain standard for accurate work in hard, dry woods.

Another new Russell Jennings tool which you will find a good seller is the Solid Head Expansive Bit, which is the strongest and most readily adjusted expansive bit made.

WRITE TO US AT OUR NEW FACTORY AT ST. CATHARINES, ONT., FOR ANY INFORMATION REGARDING AUGER BITS AND BRACES, EXPANSIVE BITS, ETC.

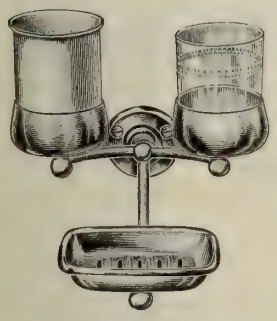
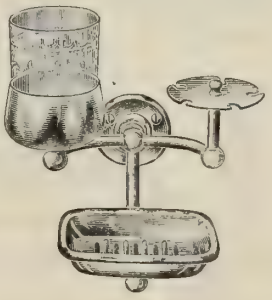
"Universal" Bathroom Fixtures

The Fixtures That Sell Themselves



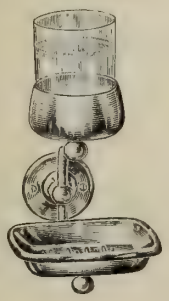
Combination Glass Shelf, Tumbler, Tooth-Brush and Soap Holder



Combination Glass Shelf, Towel Bar and Tumbler Holder

SERVICE AND APPEARANCE

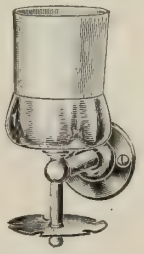
Tumbler Holders and Soap Dish



These are the essentials of Bathroom Fixtures. In "Universal" Bathroom Fixtures these two qualities are at once apparent. The possible customer sees at once that these fixtures are of substantial construction, that in them there is strength where strength is needed. Wall plates are large and massive, joints are perfectly made and the fixtures impress the customer at once as articles of quality.

Tumbler and Tooth-Brush Holder and Soap Dish

CHOICE OF PATTERNS.



The style of "Universal" fixtures is also noticeable at a glance. The patterns are artistic and harmonize well with the interior of any bathroom. The finish is a highly-polished, heavy, nickel plate. Each "Universal" fixture or combination is made in all of the different graceful patterns, allowing a customer to fit out his bathroom in one harmonious design.

Tumbler Holder and Soap Dish

NEW LILY CUP PATTERN.

The illustrations here show some of the fixtures and combinations in the "Lily Cup Pattern." Its beauty, strength, and the ease with which it can be cleaned are easily noticed. In a good display it sells itself.

Tumbler and Tooth-Brush Holder

We have attractive display cases or stands to help sell your line.

ELEY

CARTRIDGES

We Load for the World!

¶ No Ammunition Manufacturer or Loader handles or loads a greater variety of shot gun powders than ourselves, consequently our experience of the styles of powders and the specification of loads which give the greatest satisfaction to sportsmen is second to none.

Eley Smokeless Shot Gun Powder (33 gr. class) is inferior to no other powder. 33 grains is the Eley Standard load, and that this will do the work more satisfactorily than heavier loads of other powders is one of its merits. This load gives results equal to 3¼ drs. of other bulk smokeless powders.

ELEY CARTRIDGES are shot in the snows of Canada, the heat of Central Africa and India, and elsewhere throughout the world.
SOLD BY ALL GUNMAKERS AND AMMUNITION DEALERS.

WINDOW DISPLAY OF MILLS HARDWARE COMPANY

This Window Won the Prize

Here is the window display of the Mills Hardware Co. of Hamilton, Can., which won the first prize of $100.00 in the great Starrett Show Window Contest.

The symmetry and balance of the display, the careful arrangement of the groups, the wise selection of the various tools, combined with artistic taste and perfect technique in the decoration of the window, have produced a result that the judges declared supreme.

The other windows were only a step behind in the race for the prize, and many fine ideas were conceived and executed with great skill. Prizes were awarded up to the fifteenth, which included the displays of the following:

2 Kalispell Mercantile Co., Kalispell, Mont.
3 Western Hardware & Supply Co., Portland, Oregon.
4 Hazard, Gould & Co., San Diego, Cal.
5 Duncan & Goodell, Worcester, Mass.
6 Alden & Judson, Grand Rapids, Mich.
7 H. O. McClure, Tulsa, Okla.
8 I. E. Swift Co., Houghton, Mich.
9 The Winters Hardware Co., Fremont, Ohio.
10 Wm. K. Toole Co., Ltd., Pawtucket, R.I.
11 The Bond Hardware Co., Guelph, Can.
12 Adam Decker Hardware Co., St. Paul, Minn.
13 San Diego Hardware Co., San Diego, Cal.
14 Graves Hardware Co., Springfield, Mass.
15 Vonegut Hardware Co., Indianapolis, Ind.

We congratulate the winners and hope that the increase in sales has proven our claim that it pays well to display Starrett Tools.

The L. S. Starrett Co., Athol, Mass.

More Holes Per Dollar of Cost

That is the real test of Drill efficiency. *Wilt Twist Drills* will give you more holes per hour—
More hours of service before wearing out.
And every hole will be absolutely accurate and uniform.

Wilt Twist Drills are made by a new automatic process that machines the drill complete at a single chucking — work that requires 5 to 7 chuckings under old processes.
The Wilt process insures absolute accuracy and uniformity, it insures a drill that is perfect in contour and correct in its proportions.
Wilt Drills are hardened in automatically controlled electric furnaces to exactly the right degree of hardness for the work intended.

Carried in stock by all high-grade hardware dealers.

These Are The Cross-Cut Saws Your Customers Want

The man who has struggled with a poor cross-cut saw and then has tried a Disston will never change again.

This is one of the reasons for their rapidly increasing popularity which has resulted in a steadily growing demand for

Disston Cross-Cut Saws

They are ground to a true taper by the special, and exclusively Disston, grinding process. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge. This special method of grinding gives the maximum amount of clearance without sacrificing elasticity and stiffness. Any man accustomed to a cross-cut saw knows what that means.

And only Disston Crucible Steel is used. This steel combines the hardness and toughness that produces the wonderful edge- and set-holding qualities for which Disston Cross-cut Saws have long been famous.

Send for our Cross-Cut Saw booklet—free for the asking.
It is the finest book of the kind ever published.

DISSTON No. 122 HANDLE

is gaining wider favor every day through its durability and the ease and speed with which it can be attached or detached.

It will be noticed in the sectional view that the cap is made with a long neck, tapped to fit the threaded end of loop rod. This rod extends through the handle, making the connection and line of pressure, when on saw, from top of handle to bottom edge of blade, insuring a strong, firm grip on saw, without the possibility of lost motion or wobbling. The length of this handle is 8 inches, and the diameter 1¼ inches.

CANADIAN BEAUTY
ELECTRIC HEATING APPLIANCES

For Good Sales

"Canadian Beauty" ELECTRIC SAD IRON

This beautiful Iron is built for service—service that will satisfy; that is the reason why it is favored for household and laundry use. It is heated by an element that evenly distributes the heat over the whole ironing surface, thus getting the greatest efficiency from a minimum of current.
GUARANTEE: Should the heating element prove defective at any time, a new one will be given by your dealer or by us. It is guaranteed for all time.

"Canadian Beauty" ELECTRIC TOASTER

Very strongly made, beautifully finished in polished nickel, and is insulated so that no heat reaches the base, thus overcoming any possibility of damaging the surface of any table on which it may rest.
Toasts 2 slices of bread quickly. The top is designed for holding toast and keeping it hot, or a coffee pot can be placed thereon as there is sufficient heat reaching it to keep the coffee at a boiling point.
Guaranteed for two years. With ordinary care it will last a life-time.

Let us send you full particulars on these and on other electric goods.
Ask for circular on complete line.

BOSS OVEN

GLASS DOOR

GUARANTEED

No. 750

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

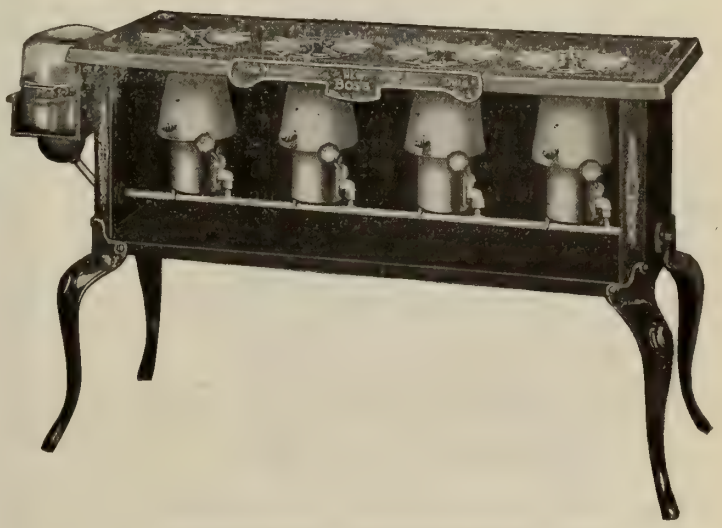
The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.



NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

"HAMILTON JEWEL" Gas Ranges

are very attractively finished and insure
ECONOMY OF GAS

Adjustable Non-Leaking Needle-Point Valves

can be adjusted in a moment to burn any kind of gas at ANY PRESSURE.

We have varieties of gas ranges to suit every purpose. Horizontal needle-point valves are used on all types, exclusively.

The adjusting nut on the valve shown separately in above cut controls the flow of gas.

The valve is horizontal and secures a perfect mixture of gas and air; the gas is delivered from the point of the needle into the air chamber, where gas and air are thoroughly mixed; this insures a perfect blue flame, consuming the maximum of air and the minimum of gas, resulting in **greater heat and lower gas bills.**

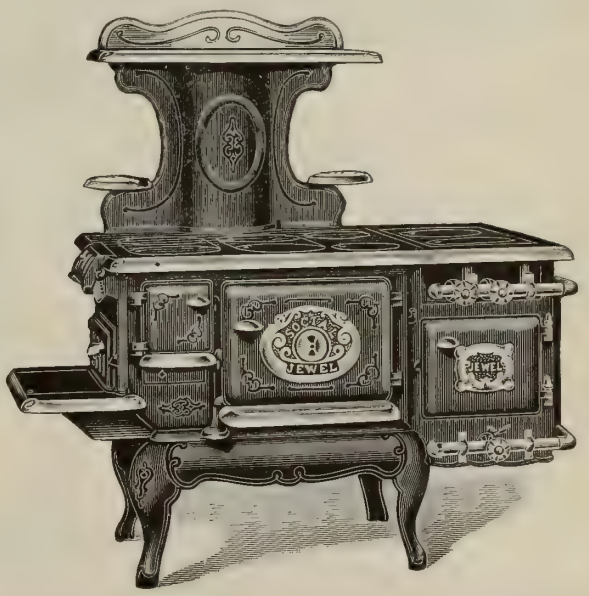
The horizontal needle valve has **no seat, spring or screw, which are liable to wear, work loose and eventually leak.** They will last as long as the gas range, and for exact mechanical construction are absolutely guaranteed to be perfect in every detail.

THE SOCIAL JEWEL
WITH GAS EXTENSION

is a beauty that will turn prospective combination range buyers your way.

It is very compact, **moderate in price,** and economical on any fuel—hard or soft coal or wood; manufactured or natural gas.

Made in two sizes—16 and 18 inch ovens.



Independent Gas Oven measures 11½ x 18 x 9 inches.

Gas connection is equipped with our horizontal needle-point valve.

We'll be pleased to furnish full particulars and prices.

Remember, this combination is absolutely guaranteed, and will be the means of increasing your trade.

Try it and see for yourself.

3

OLD CHESTNUTS

HERE THEY ARE:

1. Nothing succeeds like success.
2. Satisfied customers pay.
3. Better be sure than sorry.

Now we'll tell you what all this hoary wisdom has to do with selling valves.

First, Morrison Valves have been on the market for over twenty-five years.

And every year our sale of valves increases.

Secondly, in view of the above we don't think that you will need a search warrant to discover a reason why customers come back for Morrison Valves.

We simply had to have the goods to last for all those years as well as to keep growing.

Thirdly, You don't stock up with a lot of experimental apparatus when you buy a line of Morrison Valves. You only have to show a Morrison to make the sale—and clinch a customer too.

You had better look over our catalogue—it is yours for the asking.

Are Your Customers Slow in Paying Up?

Why do people use this saying "as safe as the bank?" Is it not because "The Bank" has a system that is almost perfect, and because of this system a feeling of security is engendered in its patrons that makes for stable business relations through mutual confidence?

Your banker has a System that enables him to keep track of all the details of your account and he gives this information to you every time you make a deposit or withdrawal—He knows how your account stands ALL THE TIME and you have confidence in him because of his good system.

Do you know how all your customers' accounts stand ALL THE TIME? If you do not, you are not in the possession of important information you ought to have. Does your customer know how his account stands ALL THE TIME? If he does not, you are keeping information from him that he should have; information that will goad him into paying his account when he sees it mounting up; information that will enable him to regulate his other expenses so as to take care of the account. It means money to you and peace of mind to your customer. Your banker keeps you posted as to your account. Do as much for your customer; it will foster the same feeling of confidence, and confidence is the life-blood of your business.

The McCaskey System is "AS SAFE AS THE BANK" because it operates along the same lines. It creates confidence, gives information, and looks after a merchant's accounting in the most up-to-date manner known. Write for further information.

JOHNS-MANVILLE Service is of value to you because it enables you to give your customers a positive assurance of satisfaction. The J-M Service is so thoroughly organized and so widely distributed that it takes care of your customer's every requirement after sale—thereby freeing you from all responsibility.

Jones Speedometer

Actuated by centrifugal force; not affected by variations in temperature, electrical influences, or vibration. Dial is attractive and easily read, having a speed scale with large, equally spaced figures. Has trip and season Odometer registering backward as well as forward travel, 100 miles and repeat and 100,000 miles and repeat, respectively. Trip Odometer is equipped with instantaneous reset—an exclusive Jones feature. ATTACHED TO EITHER RIGHT OR LEFT HAND SIDE OF CAR.

Long Horn

A purely mechanical warning signal operated directly by hand or elbow. Won't fail, because there are no batteries or wires—hence it can't fail. Loud, powerful note, or low, melodious tone, at will of operator. Costs little to install, nothing to maintain, and will outlast the car. Price $12.

Carter Carburetor
Multiple-Jet Principle

Works with the motor, not against it. Never "lags or drags." Built on a principle that gives engine complete automatic control over the amount of fuel consumed.
Effects a real increase in economy, flexibility and power. Allows lowest throttle, insures quickest "pick-up," and saves at least 10% on fuel.

J-M Lens (Non-Blinding)

Makes a perfect Headlight. Illuminates the roadway clearly in front of the car, yet does not throw a blinding glare into the eyes of motorists and pedestrians. This is produced by a front glass of pronounced curvature, frosted over its entire surface, with the exception of an oval area, slightly below the centre, about 3 in. x 5 in., which is left transparent. Through this oval area a powerful searching beam is projected, forward and downward, centralized on the road, instead of the wide, blinding glare produced by the old style of lens. For all standard makes of lamps. Price $6.00 per pair.

J-M (Mezger) Soot-Proof Spark Plug

Proof against effects of soot—will not short-circuit—will not leak. Gives hottest spark and longest service. Standard for years. Millions in use. Price $1.00.

What Good Buying Means to a Business

Too Much Reliance Placed Upon Native Shrewdness — Men Confuse Shrewdness With Skill — Buying is the Fuel of the Business Machine.

By National Association of Credit Men.

ONE of the most interesting problems in commercial affairs is why so small a percentage of retail merchants succeed even to the extent of remaining in business and meeting in full their obligations, though they go into business presumably expecting to do better than make both ends meet.

The answer to this problem is that men rush into business ventures with an idea that it is a very simple matter to run a business and that the only elements that really enter into it are buying and selling. They have no idea how involved and intricate are the elements that go into the making of a generally successful business.

We would not intrust a machine for motive or productive power to an unskilled laborer if safety and success are to be assured, and so it is that the business machine breaks down and brings disappointment to the unskilled and unfitted operator.

In this country there is too much reliance upon native shrewdness. Men confuse shrewdness with skill, thinking they are identical but they are not, for while shrewdness may be a source of reliance in time of emergency, it is skill, —or honest, energetic application of common sense, knowledge, and experience to the task in hand,—that builds substantially and makes for successful operation.

Buying is the fuel of the business machine and should be the first subject for the exercise of skill upon the part of the retail merchant. If good judgment is not used as to quality or quantity the business machine will be deficient in profit-producing power. There is a homely but pertinent maxim, "Goods well bought are half sold." It takes skill with all that that word implies to compass this first requisite of profitable business. Present-day competition calls for such skill as men never had to exercise before to satisfy rapidly changing tastes and needs of the consumer, and create new demands which the merchant must arrange to satisfy.

This leads us to consider the relation of buying to the important feature of creating a debt, for the meeting of which provision must be constantly made. A debt contracted, known commercially as a credit, has two terminals —that when the debt is contracted or the credit extended and that when the credit is redeemed or the debt extinguished—and there can be no safe and successful start from the first terminal without having the second distinctly in view.

Dependence cannot be placed upon Providence or chance to extinguish the debt. Retail merchants fail and are unsuccessful because they overbuy or lack the skill properly to adjust purchases to the selling power of their business or to their available capital, which eventually brings about embarrassment due to disproportion of matured obligation to likely be available assets. Overbuying or inflation of stock is the danger against which every merchant must constantly struggle.

Therefore, the merchant must first determine the safe purchasing power of his capital — must know how often it is necessary for the stock or capital to be turned over each year, so that his credit obligations may be properly provided for, the largest discounts availed of, and the expense of depreciation for undesirable and out-of-date goods kept at a minimum.

In illustration,—a merchant starts with $5,000 capital and at the end of the year has carried an average stock of $10,000, had total sales of $15,000, with a gross profit of 25 per cent. and an expense of 19 per cent. His payments for merchandise had averaged 30 to 60 days slow, with the assistance of a small bank credit. The result would approximate the following:

Year's gross profits		$3,750.00
Deduct:		
Operating expenses	$2,850.00	
6% on capital	300.00	
Interest on overdue accounts	150.00	
Interest on bank loan.	60.00	
Depreciation on stock.	300.00	
		$3,660.00
Net profit		$ 90.00

Should this merchant have carried an average stock through the year of $5,000, sold for the year $15,000, on a cash basis his turn-over of capital would have been three times during the year and he could have taken advantage of discounts with the following approximate results:

Gross profits		$3,750.00
Discount on merchandise purchases		350.00
Total		$4,100.00
Deduct:		
Operating expenses	$2,700.00	
6% on capital	300.00	
Depreciation on stock.	200.00	
		$3,200.00
Net profit		$ 900.00

Skilful buying as exemplified in these two illustrations would have spelled success and earned a difference of over 16 per cent. on the capital invested by this merchant, and given to the business machine its fuel on a profit-producing basis.

These two illustrations prove that it is not the extent of gross profit that assures success, but the skilful and discreet handling of purchases which have eliminated some of the charges against gross profit and added to the net result which is the real test of profit-earning power.

As a final word, for it cannot be too frequently dwelt upon, sucess in retail merchandising is in proportion to good buying, for upon it depends the rapid turn-over of capital, the securing of best discounts, and a reasonable net profit.

Stove Demonstrations As An Aid to Sales

Toronto Hardware Firm Holds Stove Demonstration—Circularized the Surrounding District—Used Suburban Newspaper—The Results Attained.

Written for Hardware & Metal by C. H. Trelford, of Trelford Hardware Co., Toronto.

HAVING been on the road myself for some years, during which I was selling stoves, I have come to realize the usefulness of actual demonstrations through having seen them worked out on a large variety of hardware articles over a large part of Canada.

Hence our whole sales system is dependent upon our demonstrations, to which the other departments become mere adjuncts. The sight of the actual operation of a process appears to be much more convincing to a customer's mind than all the mere telling in the world.

To get down to the case in hand. Beginning a week before the inauguration of the sale proper, when our big demonstration of stoves and appliances occurred, we started the ball rolling by circularizing the trade with two thousand, eight-by-ten dodgers of which the accompanying cut is a replica; at the same time, we inserted a duplicate of this circular in our weekly suburban paper and allowed it to stand for two issues, which of course covered a two-week period.

We have thirty feet of well lighted window space and displayed our wares there in the manner shown in the accompanying photograph.

By this means we had everything dropping at once so as to have everything favorable for a red hot demonstration.

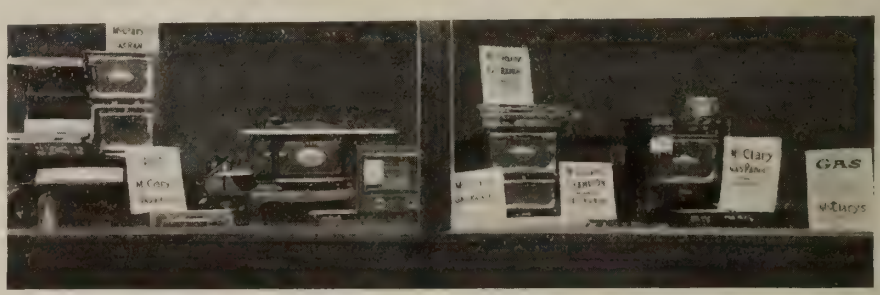
I should perhaps explain, that the same idea, on a smaller scale, has become a part of our regular practice. Although we have been in business here a very short time, we already have our trade educated up to the idea; for never a day goes by that we do not indulge in a demonstration of some kind.

In this particular case, we featured the gas stoves and appliances quite strongly on account of the large variety of hardware goods that may be used to advantage on such stoves. Incidentally, we made a leader of one particular style of stove on that account, together with the fact that its convenience and adaptability particularly recommend it to the housewife.

McClary's furnished us with two of their best men, so that with our own force we had five men demonstrating and selling. And each man, let me add, knew his wares from A to Z, had studied them from every angle and last of all — believed that they were the goods. That fact may have something to do with the fact that to-day, three weeks after the demonstration, we still feel the effects of it on our sales and actually have orders that we cannot fill.

Gas Attachment.

We have a very convenient gas attachment for our demonstrations; one that is simplicity itself. Through a hole in the floor we have connected up a hose with the pipes in the cellar so that it can be used to reach the bulk of our floor space. It is simply a matter of hooking up the hose with the stove of the moment and then by lighting the gas, turning it off and on, changing catchy parts, etc., it is very easy to hold the customer's attention. We, of course, enlarge upon the superior advantages of the stove we are endeavoring to sell, discussing it intelligently, touching upon its economical features, etc.



Circular used by Trelford Hardware Co., announcing stove demonstration.

We try not to forget that we are talking to laymen, not stove experts. For that reason we make our explanations as clear and as much to the point as it is humanly possible to do. For the poor glory of a few high-sounding phrases and confusing technical terms, it is scarcely worth while to talk over a woman's head and so risk the loss of a sale.

We never indulge in any cooking in connection with our demonstrations. My experience is that it invariably transfers the customer's attention from the stove to the food. We are hardware men, not grocers. I saw a most convincing proof of this fact in a Canadian city only last year. All of the hardware stores had a big stove demonstration day. One of them pulled off the cooking stunt. That store failed to sell a dollar's worth of goods while the others had a splendid day. One store in particular that was practically on a par with the one in question, in so far as opportunities, etc., went, made an unusual record by avoiding the cooking stunt and confining itself to stoves.

Our campaign has worked so well, that we will repeat the performance as soon as things quiet down. It has not surprised us, however, that it has worked well. We laid our plans and endeavored to meet the obstacles beforehand, so that what we had in effect was a practical sales machine that was entitled to meet with success.

Our heavy trade at present is in builders' hardware, to push the sale of which, one of us can usually be found haunting the vicinity of one of the numerous residences in process of construction in this neighborhood. When the builders' hardware trade slackens with the approach of fall, we will pro-

Sectional view of show window of Trelford Hardware Co., Toronto. The window is an exceptionally large one, but difficulty was experienced by the photographer in securing a photograph.

ceed to instill new life into our stove trade again. In the meantime, as previously stated we are still engaged in the effort to keep up with the orders resulting from our last demonstration.

TRADE PAPERS ARE HELPFUL.

Chatham, Ontario.—"In my experience," remarked a local hardware dealer the other day, "I find that the clerk who makes a practice of reading the trade papers speedily proves himself more efficient than the clerk who disregards their help.

"A great problem in the training of new clerks is to get them interested in their work—to get them to take pride in the hardware business as distinct from any other. The clerk who is interested to begin with can usually be counted on to pick up practical information.

"The trade paper is immensely helpful in stimulating the clerk's professional spirit. At least, my experience is that the clerk who reads his trade paper regularly shows results in increased interest and efficiency that more than pay for the time so spent. And, of course, in addition to its inspirational value, there is always the practical side. It helps to get the clerk interested in better ways of doing things; and from reading the bright ideas of others, he learns to think for himself, to observe and to originate.

"I've worked as a clerk in stores where the proprietor would lock the trade papers in his desk and would become wrathy if he found one of his staff perusing them. But I'm glad in my own store to have the boys look over every paper that comes in."

VAUGHAN & BUSHNELL MFG. CO.'S NEW CATALOGUE.

A new catalogue of fine tools has just been issued by Vaughan & Bushnell Mfg. Co., of Chicago, Ill. It is printed on fine coated paper with heavy double cover stock and title embossed in black, red and gold. It contains illustrations, descriptions and prices of all kinds of hammers, ratchet braces, automobile socket braces, pliers and nippers, staple pullers, anvil tools, chisels, punches, nail sets and belt punches, etc. In fact all tools necessary for carpenters, blacksmiths, bricklayers, machinists, plumbers, butchers, icemen, farmers, etc. The Canadian agent for this line is Alexander Gibb, St. Nicholas Building, Montreal.

Getting After the Factory Trade

A New Field by Way of the Factory Route

Written for Hardware and Metal by K. E. Bornhold, Berlin, Ont.

THE question of "How can I increase my business?" is ever before the real, the live, the energetic hardware dealer. With this end in view, the question of opening up a new field by way of the factory route may properly be discussed. The avenues of approach are many and one need not depend upon one's own ideas. Seek helpful suggestions from those about you, be they competitors or trade journals.

The scarcity of factories or the limited number of employees in any particular town need be no bar to a lively campaign for their trade. They will grow and incidentally they offer a sure and dependable outlet for a large variety of hardware, of a variety that is always on hand in any hardware store.

A very popular and telling method is to make a custom of making the rounds weekly, and above all, regularly, in order that your trade may learn to look for you on a certain day of every week, so that they may depend upon it that you will be there, to take orders, or to give information, as the case may be.

The salesman should, of course, carry a line of samples with him. Belt hooks, hack saw blades, files, emery wheel dressers, babbit metal and sample cards will suffice for an average line and may be changed as local demands require. In a furniture factory, for instance, the natural lines to go after would be screws, nails, varnish, etc. Study the requirements of that particular factory and make your stock correspond to their wants. Brass and steel butts suggest themselves in connection with firms that manufacture tables, desks, etc. Buffets and cabinets require a large amount of glass, thus enabling the hardware dealer to compete for this trade.

Each furniture factory has an upholstering department. Here shears and tacks are used.

In the finishing department linseed oil, turpentine, varnish, dry colors, etc., are used. Employees frequently require an addition to their private tool sets. Or they may make inquiry about household articles or the painting of their house. This is where the sample card of paints plays a prominent role.

The same methods that have been mentioned as applicable to furniture factories may be applied to mills, foundries, electric supply houses, shoe and button factories, etc.

By a careful cultivation of the men met in these rounds an enviable position may be built up. One can make himself the middleman between consumer and jobbing house to a surprising degree. Cultivate the men you meet. Make them feel that you are their adviser and will gladly furnish all the information they may require. When at a loss yourself, you can always fall back upon your jobber, who will gladly help you in everything of this nature. Your customers will soon learn to depend upon you and finding you careful about small orders will eventually give you larger ones.

In conclusion, it might be well to state that the keynote to a successful factory trade is the promptness with which orders are filled and also the regularity of the weekly calls. Splendid relations and substantial business may thus be established between the salesman and the factory staff. The result will justify the trouble.

THE DUMB BROKER.

(Written from experience.)

O, Broker, Broker, tell me why
The bulls are lying low,
And why the bears are fighting shy,
Who used to boss the show?
O, say, where are the public now
Who once made prices hum,
And tell me, tell me, why and how—
* * * * * *
The broker-man is dumb.

—Financier.

"Get into the envelope and seal the flap after you." This is the advice of Louis V. Eytinge to a man who asked him for a set of rules for writing successful sales letters.

* * *

If your goods have quality and you think you must cut prices—take a brace—what you need is better salesmanship. You know your goods are worth the price. Make the prospect know it too.

HARDWARE AND METAL

VOL. XXVI. No. 23 Toronto, Canada, June 6, 1914 Two Dollars per Year

The Trade Press as an Educator

IF the Dominion Government adopts the recommendations of the Royal Commission on Industrial Training and Industrial Education, and many believe it should do so, Canada will spend $3,350,000 annually to aid technical instruction and training, $3,000,000 of which will go to supplement local efforts in providing vocational training for those who are past school age. Prof. W. J. Robertson, the chairman of the Commission, believes that national progress is dependent solely upon the efficiency of individuals, men and women. What is required, he contends, is that the individual worker shall possess **intelligence, practical ability and co-operating good-will**, and these essentials are not inherited, but must be acquired by educational and technical training.

The work which the Dominion Government proposes to do through the establishment and maintenance of technical schools and by means of pre-vocational training will be a worthy complement to and recognition of the educational and inspirational work which the trade and technical press has been doing persistently and systematically for over thirty years. The publishers of trade and technical publications have no desire to pose as public benefactors entitled to subsidies, but it is an incontrovertible fact that they have done, and are doing, a great deal to advance the progress of Canada by enunciating and teaching the principle laid down by Prof. Robertson, as being essential to individual efficiency, and, therefore, upon which the greatness of the nation depends.

Intelligence, practical ability, co-operating good-will—these three have been for more than a quarter of a century the foundation-stones of the educational policy of the trade and technical press. It has taught men to think for themselves; it has roused their latent capabilities into action; it has made practical knowledge of and ability in one's business all-important essentials, and has helped men to acquire them by teaching advanced methods of manufacturing and selling, improved credit systems, and a proper appreciation of the place and power of modern advertising; it has been the inspirer and the leader in practically every co-operative movement having as its object the interchange of craft knowledge and the betterment of conditions. The trade press has served as the medium through which men have learned all the news of particular interest to themselves. A trade or technical paper is the only newspaper which supplies news one-hundred per cent. interesting to its readers. In a word, the trade and technical press has taught men that all real, lasting success, both as an individual and a business man, must be based upon **Service**, the fundamental of all honest, modern business.

It is inconceivable that the Government of Canada, which has already declared itself as realizing the importance of the work of industrial and technical education, can consistently permit its officials to put any obstacle in the way of a class of newspapers that are aiding to a very appreciable degree the accomplishment of that same work. There are a host of excellent reasons for maintaining the trade and technical press on the same basis as other legitimate newspaper enterprises, in the matter of postal rates and regulations, notwithstanding the personal prejudices of a few individual interests.

The Evils of Price Cutting

WHEN business slows up and prospects do not look any too good for the immediate future, there is often a tendency on the part of some manufacturers, jobbers and retailers to resort to price-cutting, the result being that prices are cut to the limit and business is demoralized. This is particularly true of retailers in some parts of this country and is a dangerous way of attempting to stimulate business. Every retailer should stand up for a legitimate profit.

A firm resolve not to cut price, but to maintain an equitable standard, based on cost would indeed be a good resolution to abide by. Make a price that carries a legitimate profit and do not be afraid to stand up for your profits. One of the greatest evils of to-day is that retail hardwaremen in many instances, are trying to undersell each other. Conditions of this kind should not exist. Price-cutting is bad business.

One of our greatest troubles has been our misunderstanding of the word "competition." It has occurred to a few that the word could mean something else besides "price"—that there could be such a thing as competition in service, in quality, in suggestion, in originality; but to the great body of merchants, both large and small, it has meant only "price."

Someone once said that competition was the life of trade. He should have said that a common-sense, co-operative competition, is the life of trade, or a mighty good stimulant, but that a riotous and haphazard competition is the death of business.

There are too many men who do not know their own

business, and singularly enough, they do not seem to realize this important fact. A man may know one side of a business and yet be unfamiliar with another side. He ought to be able to turn his business inside out and see what is inside as well as being able to look clear through it—or in other words, know it from its tap roots to its top-most branches.

If hardwaremen only knew each other better, "and knew where to get off," business life would be made much easier and profits would accrue more rapidly. How much better it is to work together than single-handed. Think of the hundreds of carloads of nails, wire, cement, etc., that are handled yearly by some hardwaremen at practically little or no profit. Think of the hundreds of lines that have been placed on the market during recent years —lines of goods which have been produced to sell at a reasonable price,—allowing the retailer a legitimate profit, and which after being on the market a few months have been cut-priced to the limit, by some retailer who for some unaccountable reason has cut the price and demoralized trade in these lines in his district. Retail hardwaremen should try to understand each other better. Too many things are taken for granted, and too many guesses are masqueraded around as facts.

The Business Situation

ALTHOUGH business in some lines is not as brisk as had been hoped for, it is felt that hardwaremen have less to complain of than merchants engaged in other lines. The recent period of continuous warm weather has had a beneficial effect upon the sales of summer goods and the briskness of the past two or three weeks has helped to offset the quietness which prevailed earlier in the season, when weather conditions were unseasonable. The movement of seasonable goods, especially with the retailers, has shown an encouraging increase.

In the metal markets little or no change has taken place. Orders are small and buyers are still very cautious. Paint manufacturers report that they are doing a very satisfactory trade with the retail hardwaremen and the latter report that the recent period of warm weather had a splendid effect on paint sales.

Stove manufacturers report a heavy demand for gas and summer stoves. A number of fall booked orders are being received. Retailers expect to dispose of fair quantities of cutlery, silverware, etc., during the present month. These lines are sold as wedding gifts.

Some difficulty has been experienced in securing fall banking on certain lines, but the trade generally is hopeful that conditions will have improved greatly by fall.

Trade at present is spasmodic, and is governed largely by the consumptive demand and weather conditions. Many firms are only buying for immediate needs and the general belief is that hardware stocks, as far as retailers and jobbers are concerned, are comparatively light for this season of the year. The promise of good crops has had a splendid effect on trade generally and the majority of merchants believe it is only a matter of a reasonable length of time until conditions have again become normal. Cheap money and the favorable crop outlook are among the chief factors operating to create a more cheerful sentiment regarding the future.

Vacation Days

THOUGHTS are usually turned to the question of summer holidays when the hot weather is ushered in. Now is the time for the merchant, and particularly the one with a large staff, to arrange for the allotment of vacations. Certain members of the staff cannot get away together, and the proprietor himself must be on hand when certain other members are absent. This makes a problem which requires no little attention and should be given consideration early in the hot season.

There are too, a great many merchants who have got the impression that the store cannot get along without them. This, nine times out of ten is usually erroneous. A vacation once in a while is a tonic which every man should have. He may not think he needs it at the time, but there will come a time when he will feel the benefit of it. Some men work from daylight until dark, year after year, without so much as a day's holiday with the exception of Sundays. These men should remember that life on this earth is short and that they will be a long time dead.

But when a vacation has been decided upon, the important question is where shall it be and what its nature? There are some people who on their vacation do not have any at all. They go in for strenuous exercises which do not give the tired body a rest, and when the holiday is over they are ready for another. This is a great mistake. Far better not go away at all than come back more tired than when you left.

The Evolution of the Scale

Ancient History on the Earliest Known Weighing Device Found in Ruins of Pompeii—The Gradual Improvement Up to the Modern Automatic Weighing and Computing Scale—Value of Heavy Scale for Checking Incoming Goods.

THE weighing device of 2,000 years ago—if we could to-day but place it on the counter—would make a sorry contrast with the modern scales to be found in so many grocery stores of the present. The evolution of the scale provides an interesting chapter in the era of progress from the time of the ancients and their crude methods. If one could but take a long peep back into the past and see the weighing devices the Romans used centuries ago, the sensation would be as unique as if Julius Caesar himself were to come back to earth to witness to-day the flight of a bird-man in a modern aeroplane.

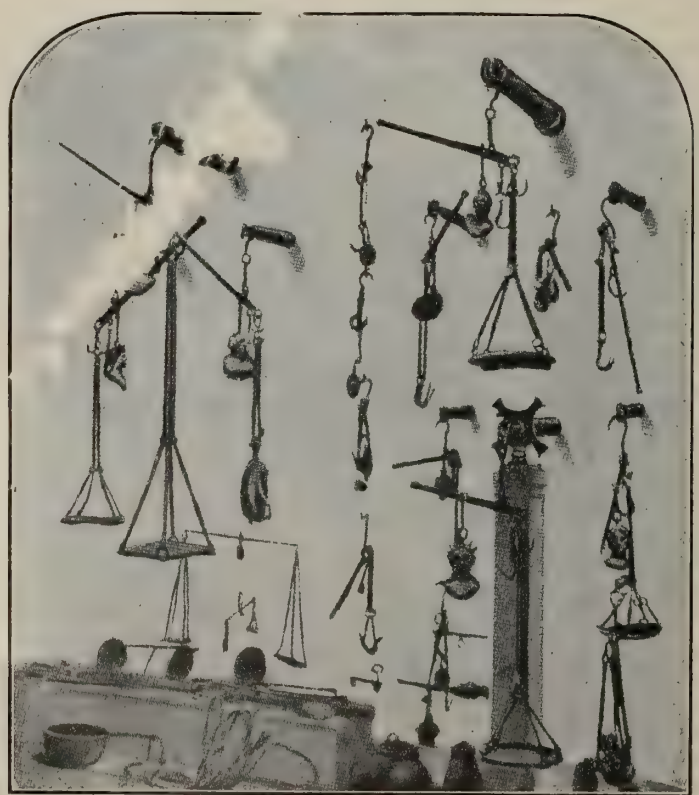
Weights and measures have from time immemorial given standards for the traffic of the world. They antedate the use of money of any sort. Metal as money was originally so much weight in the balance; its name was weight word; the skekel was not at first a coin, but a shekel weight of silver. The talanton of the Greeks was a talent weight; even now the British gold piece retains the old weight name of pound, though more than two-thirds of its original weight is gone. No satisfactory history of weights can be compiled, and the true values of ancient weights are as uncertain as their origin. The Egyptian supposed he got the balance from his god; the Babylonian would say his wise men invented it; the Israelite traced it back to Cain.

When the Ox Was the Unit.

The earliest illustrations of the process of weighing are found on the temple walls of Egypt, dating back to the Rameses and the Thothmes kings. Here the balance appears, having gold rings on one end, counterpoised by a weight in the image of an ox head on the other. The original unit of value—i.e., the average weight of an ox or cow, was everywhere current in primitive times. The Homeric ox unit has been calculated as on an average equivalent to 135 grains of gold.

The most accurately defined weight is probably the Babylonian mina, discovered by Petrice of Egypt, and now deposited in the British Museum. This is of serpentine stone, conical in shape, of a weight of 15097.6 grains, with this cruciform identification: "One Manch, standard weight, the property of Meridach—sar I lami, and duplicate of the weight which Nebuchadnezzar, King of Babylon, made in exact accordance with the deified weight of Dungi, a former king." According to Layard's tables, the derived weight of one mina seems to have approximately been that of a pound avoirdupois.

One of Oldest Scales Known.



The scale above on the left is one of the most ancient known. It was discovered in the ruins of Pompeii—the great city that was covered 2,000 years ago by lava and which lay buried until well into modern times. As will be seen from the drawing, this old device consisted of a rope run through a pipe held horizontally by an upright in the centre. A lamb in those days was weighed by placing it on one pan of this scale and stones of equal weight on the opposite pan.

The contention is made, and is a reasonable one, too, that this was the origin of our "stone" of 14 lbs., used by many to-day in selling oatmeal, flour, etc. This old device has as well some of the ear-marks of the modern sensitive equal-arm-balance used by the apothecary.

Coming of Steel Yard.

As time wore on this Roman scale gradually evolved itself into the next shown above, which is an old type of the steel-yard. Again this became more modern, and

Reproductions of ancient scales found in the ruins of Pompeii which was destroyed A.D. 79.

Special Displays for Special Occasions

Advertising Manager of Edmonton Hardware Firm Arranges Two Attractive Spring Displays—Special Display for Horse Show —Builders' Hardware Also Featured.

HAROLD COOK, advertising manager, Sommerville Hardware Co., Ltd., Edmonton, believes in running special window displays on special occasions and takes every advantage of opportunities which present themselves from time to time. During the spring horse show held at Edmonton this year, Mr. Cook arranged a "Horse Show Window," an illustration of which appears on this page.

The display created considerable favorable comment and a description of the window as outlined by Mr. Cook for Hardware and Metal will no doubt prove interesting to our readers.

The centre piece was made especially for the occasion, fitted with electric fixtures; trimmed with bits, riding crops and gilt horse shoes, which were tied with ribbons in horse show colors. On each side of the centre place was placed a drape of purple plush.

The "Blue Ribbon Rider" horse head in the centre is an oil painting, a work of art in itself, by Mrs. Cook.

The pillars at each side of the background were fitted with electric fixtures and beautifully entwined with purple wisteria and foliage. The pillars were connected by a centre strip 18 inches wide on which were placed raised blocks, and entwined with roses, ferns, wisteria and foliage.

The Goods Displayed.

The goods displayed were saddles, whips, riding crops, bridles, lap dusters, harness, etc., and to give the display a true horse show spirit the goods were tied with yellow and purple rosettes.

The goods were shown on solid oak plateaus, pedestals and slabs, which were finished in golden oak mission effect. Purple plush was draped from the pedestals and puffed on the floor.

The show card was the work of Mr. Cook and was set on an oak card easel. The display attracted a great deal of attention and lent itself to boost the Spring Horse Show, as well as helping to create sales of many of the lines of goods on display.

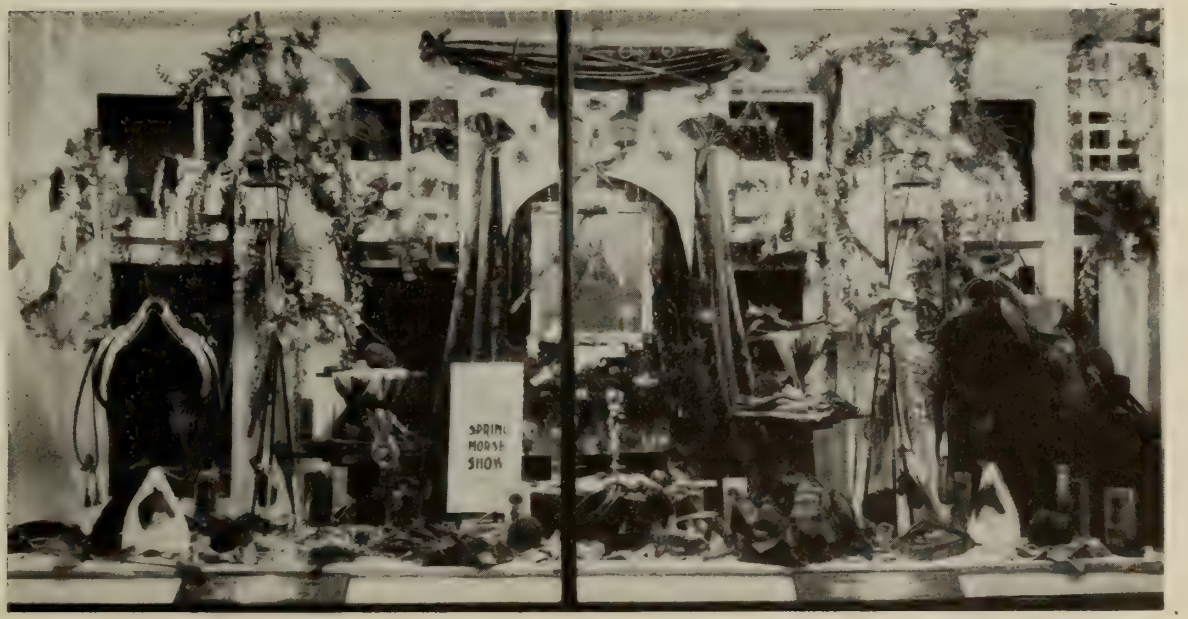
Builders' Hardware.

Another seasonable and attractive display that appeared, was one of builders' hardware, an illustration of which is here shown, although the photograph does not do justice to the display. Several hardwaremen who viewed the display stated that it ranked among the best they had ever seen.

It is unfortunate, but nevertheless a fact that many hardwaremen do not sufficiently feature builders' hardware in their show windows.

Accompanying the display was an attractive show card bearing the following, "Spring brings Yale hardware to the front."

The double pillars at each end of the background were fitted with electric fixtures, and daintily entwined with purple wisteria and foliage. The pillars were connected by a large scenic oil painting. The painting by Mrs. Cook, is of "Upper Lake" Killarney, and is a high class work of art.



The various lines were shown on solid oak plateaus and pedestals, over which green plush was draped and puffed on the floor. The floor covering was of white felt.

A high class display of mounted inside and front door sets, store door sets, etc., was shown. Door checks, butts, etc., were also featured in the display.

Both displays were very creditable ones, and the same plan could be followed by hardwaremen in other parts of the country.

See next page for cut of Builders' Hardware Display.

The Premier Glass Co. of Canada, Ltd., capitalized at $3,000,000; head office Montreal; to manufacture and deal in plain and ornamental, cut, stained and every variety of glass, and to carry on a glass manufacturing business in every branch thereof.

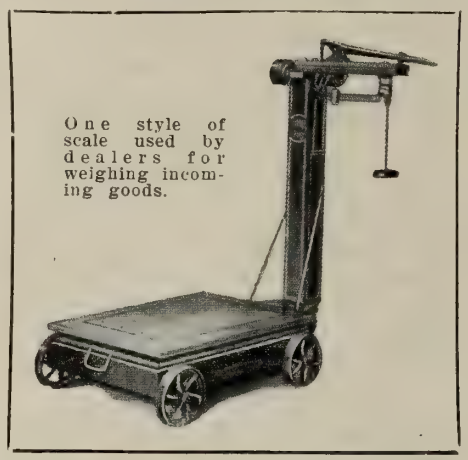
"Horse show window" arranged by Harold Cook for Sommerville Hardware Co., Edmonton.

EVOLUTION OF THE SCALE.

(Continued from page 44.)

even to-day are to be found this steel-yard type of weighing device. Down to 1830 it was the only practicable method of weighing. A few years ago our fathers on the farm used the steel-yard extensively for weighing bags of grain, potatoes, dressed hogs, etc., before taking them to market.

Value of Large Platform Scale.



Then followed the platform scale. This scale was first built with wooden levers, steel knife edges and proper bearings, while, of course, to-day the mechanism of the modern platform scale is constructed entirely of steel or iron. Many merchants make the mistake of not securing a modern heavy scale for weighing their incoming product in bulk, a very necessary proceeding, as the enormous leaks—unintentional, no doubt, on the part of the shipper, but nevertheless real—caused by the reception of short-weight goods have seriously cut into profits.

On the extreme right of the cut at the top of first page is a spring scale of what is known as the "dead-load" type, and was recently put under the ban of the Dominion Government. The scales of this class now in use will, however, be permitted so long as they pass inspection; but their manufacture is prohibited, so that in a few years' time this type will be practically extinct.

The most common forms of weighing machines seen to-day on the counters of Canadian grocers are either the scale with a sliding poise of weight or a dial-computing scale. These counter scales are designed for weighing with great accuracy.

The Computing Scale.

In earlier days accuracy in weighing was not so important as it is to-day. Then the margin between cost and selling price was usually large. It was not an uncommon thing in those days to see a dealer throw in an ounce or two after weighing the goods. In fact, it became the universal practice to give overweight, but with the arrival of modern times and the constantly decreasing mar-

One style of scale used by dealers for weighing incoming goods.

gin between the cost and selling price of merchandise, it became apparent to the merchant that he could not afford to continue an unprofitable business. At the same time, he felt the need of some quick method for finding rapidly and accurately the money value of the goods he sold. From these two requirements the automatic self-computing scale resulted.

While computing scales in some form or other were invented as early as 1849, yet practically all the really modern features of this scale have been added since 1885.

The reputable scale makers are all the time working out new and improved weighing devices, and care should be exercised on the part of the purchaser on buying only from reputable concerns, as a poor scale is worse than none at all, and there are, unfortunately, a large number of cheap weighing machines on the market.

SULPHIDE vs. BROMIDE.

Aggressiveness vs. indifference. That's it in a nut shell. The difference between the salesman, who, like a skilful general, studies his friend, the enemy's points and then attacks them, armed with superior knowledge and a fighting spirit that never knows defeat; as against the fellow of indifference, lackadaisical, don't worry, let the other fellow do it, etc. The latter would never think of deliberately hunting out a man to interest him in a sale. Indeed he is outdoing himself if he does not actually scare away the customer who comes with a firm intention to buy. Witness the recent case of a man examining and pricing a water bucket in a certain Toronto store.

"Let me see how it hefts," he said to the clerk, reaching for it. The latter reached down, fumbled a moment and straightened up again, saying as he did so, "Oh, the darn thing's wired to the others." That customer turned on his heel and walked out to buy the same bucket in a store two blocks away.

An excellent window display of builders' hardware by Harold Cook, for Sommerville Hardware Co., Edmonton, Alta.

The R.M.A. Credit Reporting System Explained

Why Many Merchants Are Getting in Considerable Old Debts by an Inoffensive Letter—Delinquents Afraid of the Consequences of Delay—Making it Country-Wide.

HEREWITH is reproduced the form used by the Retail Merchants' Association of Canada in their Credit Reporting Department. The use of this has spread rapidly, and has been developed to a much wider extent in Western Canada than in the East.

This it will be seen is divided into two sections by a perforation so that they can be easily separated.

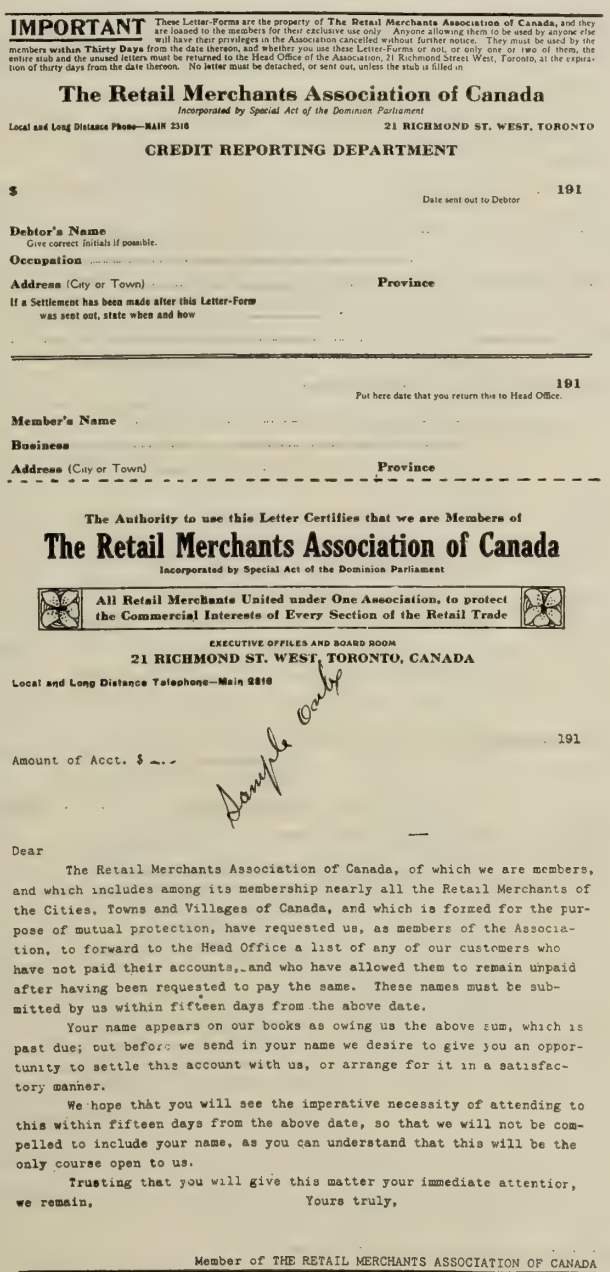
The bottom portion is torn off, the data filled in with a statement of the amount owed the merchant, is signed by him and sent out to the delinquent.

The top part is held by the merchant but must be returned, as stated, to the head office within a month from a date which is marked on the corner of each as it is mailed to members. Before being returned the information called for by the blank lines is required to be filled in for the Association's use.

It will be noted in the letter that the delinquent is called upon to pay the debt within fifteen days from the date. Otherwise the name will be passed along to the head office of the Association.

Second Letter from Association.

When this is done the latter sends another letter to the delinquent. This is on blue (summons) paper gotten out particularly for the Credit Reporting Department. This letter reads as follows:—



Dear Sir,—

John Jones, merchant, member of our Association, has forwarded to us a letter, stating that you are justly indebted to him, in the sum of $——, and after repeated requests for the same, you have failed to make a settlement—either in part or in full. We now beg to notify you that unless you make a satisfactory settlement with our member, within fifteen days from the above date, and notify us in writing within five days from the date that you make the settlement with them, we will, without further notice to you, place your name on our DELINQUENT DEBTORS' BOOK—which gives the names of all those who do not pay—and which goes into the hands of every member of our Association in Canada, which is formed for mutual protection, and which is comprised of all classes of retail merchants.

We dislike to believe that you purchased the goods with the intention of not settling for them, and we trust that you will make an effort to avoid being reported; but if you make no attempt to comply with this notice, we have no other alternative but to report you, and place your name on our Delinquent Debtors' List.

Yours very truly,

Retail Merchants' Assn.

IMPORTANT These Letter-Forms are the property of **The Retail Merchants Association of Canada**, and they are loaned to the members for their exclusive use only. Anyone allowing them to be used by anyone else will have their privileges in the Association cancelled without further notice. They must be used by the members within **Thirty Days** from the date thereon, and whether you use these Letter-Forms or not, or only one or two of them, the entire stub and the unused letters must be returned to the Head Office of the Association, 21 Richmond Street West, Toronto, at the expiration of thirty days from the date thereon. No letter must be detached, or sent out, unless the stub is filled in

Dear

The Retail Merchants Association of Canada, of which we are members, and which includes among its membership nearly all the Retail Merchants of the Cities, Towns and Villages of Canada, and which is formed for the purpose of mutual protection, have requested us, as members of the Association, to forward to the Head Office a list of any of our customers who have not paid their accounts, and who have allowed them to remain unpaid after having been requested to pay the same. These names must be submitted by us within fifteen days from the above date.

Your name appears on our books as owing us the above sum, which is past due; but before we send in your name we desire to give you an opportunity to settle this account with us, or arrange for it in a satisfactory manner.

We hope that you will see the imperative necessity of attending to this within fifteen days from the above date, so that we will not be compelled to include your name, as you can understand that this will be the only course open to us.

Trusting that you will give this matter your immediate attention, we remain, Yours truly,

Member of THE RETAIL MERCHANTS ASSOCIATION OF CANADA

Credit Reporting Form used by the Retail Merchants' Association—This is reduced greatly from original size.

Making It Dominion-Wide.

In each Province of the Dominion the association has provincial officers, with offices. From these offices are sent to every member, as many Collecting Letter Forms as he requires, and he sends them out to his slow pay or delinquent debtors. These letters are in no way offensive or abusive; but they give every debtor due notice that if he does not settle his account after a stated date, his name will be sent in to the secretary of the association, who sends out another letter to the debtor, stating that if he does not settle his account with the member within a stated time, his name will be entered on the Delinquent Debtors' List, and a copy of this Debtors' List will be placed in the hands of every member of the Association, and open for inspection by all retail merchants throughout Canada, who are members of "The Retail Merchants' Association of Canada." These names are, or will be, gathered and tabulated by the secretary of each province, and then they are compiled by the Secretary of the Dominion Board, and in this manner they become known throughout every province in the Dominion.

At a recent conference a retailer told how these letters had in a short time been the means of collecting some $19 in bad accounts.

Centres with Weekly Half Holidays or Otherwise

List of Ontario Towns and Cities Showing Whether Merchants Have or Have Not Half Day Off in Week During Summer Months —A Few Close Year Round—Of Interest to Traveler, Too.

EACH year this paper publishes a list of Ontario towns and cities where weekly half holidays are or are not observed. Each year the list where they are observed grows, demonstrating that the question of rest and recreation is one of importance. Below will be found a large number of centres represented; if any towns where a half holiday is held have been omitted, Hardware and Metal would be obliged to hear from subscribers in them:—

AURORA.—Wednesday afternoon in June, July and August.

AYLMER.—Wednesday afternoon in June, July and August.

ALMONTE.—No half holiday.

AYR.—No decision reached yet. Grocers and dry goods merchants considering it.

ARNPRIOR.—Merchants do not close here.

BELLEVILLE.—Half holiday Wednesday generally, during July and August.

BRADFORD.—Thursday, June, July and August.

BROCKVILLE.—Not yet announced, but will likely close Wednesday afternoons in July and August.

BOTHWELL.—Wednesday afternoon from May to end of September at 12 o'clock.

BURFORD. — Wednesday afternoon June, July and August.

BLIND RIVER.—No half holiday.

BYNG INLET.—No half holiday.

BOBCAYGEON.—No half holiday.

BLENHEIM.—Wednesday afternoon, from June 17 to September 15.

BRACEBRIDGE.—No half holiday.

BEAVERTON.—No half holiday.

BURLINGTON.—No half holiday.

BRAMPTON.—No half holiday.

BURK'S FALLS.—No decision arrived at yet.

BERLIN.—Wednesday afternoon in July and August.

BRUSSELS.—No half holiday.

BOWMANVILLE.—Wednesday afternoon, June, July and August.

BEAMSVILLE.—No half holiday.

CACHE BAY.—No half holiday.

CANNINGTON.—No decision yet.

CREEMORE.—Talked of, but no decision.

COBOURG.—Butchers only close here for half holiday.

COBALT.—No half holiday.

CALEDONIA. — Half holiday on Thursday from 1 p.m. in June, July and August.

A HELP TO THE TRAVELER.

Travelers will find in this list of weekly half holidays in Ontario information that will be of service to them in arranging their trips. It will be noted that there are no half holidays outside of Wednesday and Thursday, with the former a favorite.

CLINTON.—No half holiday.

COMBER.—Thursday afternoon, beginning June 18.

COCHRANE.—No weekly half holiday.

CHATHAM. — Thursday afternoons during summer months.

CHESLEY.—No half holiday.

CAYUGA.—No half holiday.

DESERONTO. — Wednesday afternoons during July and August.

DUNDAS. — Wednesday afternoon, from May to September.

DRUMBO.—No half holiday.

DUNNVILLE.—Wednesday half holiday from June 17 to Sept. 16.

DUTTON.—No half holiday.

ENGLEHART.—No half holiday.

ESSEX.—Thursday afternoon from June to first Thursday in September.

ELMIRA.—No half holiday.

ELORA.—Wednesday afternoon during summer months.

FERGUS.—Wednesday at 12 o'clock during June, July and August.

FINGAL.—No half holiday.

FORD CITY.—Thursday afternoons at 1 o'clock during May, June, July, August and September.

FORT ERIE.—No half holiday.

FRANKFORD.—No half holiday.

GALT.—Thursday afternoons in July and August.

GANANOQUE. — Wednesday afternoon at 12 o'clock during June, July and August.

GODERICH.—Majority close Wednesday afternoons, July and August.

GUELPH.—Close Thursday afternoon during July and August.

GEORGETOWN.—No half holiday.

HAGERSVILLE. — Thursday afternoons in June, July, August and September.

HAMILTON.—Wednesday afternoons during summer months .

HAILEYBURY.—No half holiday.

HASTINGS.—Wednesday afternoon, July and August.

HESPELER.—Wednesday afternoons from May to August.

IROQUOIS.—No half holiday.

KEEWATIN. — No decision yet arrived at. Last year closed Wednesday afternoon in July and August.

KENORA.—Not yet decided on. Wednesday afternoon last year, but this year some want it Thursday.

KINGSTON.—No general half holiday; some close Wednesday afternoon.

KINGSVILLE.—Thursday afternoon from May 1 to Sept 30.

KINMOUNT.—No half holiday.

KINCARDINE.—No half holiday.

LAKEFIELD.—Wednesday afternoon July and August, at 12 o'clock.

LONDON. — Wednesday afternoon, May to September.

L'ORIGINAL.—No holiday, early closing twice a week.

MEAFORD.—Stores close Thursday afternoon during June, July and August.

MERRITON.—Wednesday afternoon; June, July and August.

MERLIN.—Friday afternoon, June, July and August.

NIAGARA-ON-THE-LAKE. — Wednesday afternoon; July and August.

NIAGARA FALLS.—Nothing decided yet.

NORWICH.—Has not been discussed.

ORANGEVILLE.—Wednesday afternoon, July and August.

OSHAWA.—Thursday afternoon from June to September.

ORONO.—No holiday, but closes early every other night.

OTTAWA.—No holiday.

PICTON.—Thursday afternoon, June, July and August.

PETERBOROUGH.—Thursday afternoon in summer months.

PLATTSVILLE.—No holiday.

PORT ARTHUR.—No action yet; to be expected later.

PORT DALHOUSIE.—No holiday.

PORT DOVER.—No holiday.

PORT ELGIN.—Thursday afternoon, June, July and August. Close six o'clock year round; ten thirty preceding holidays.

PORT ROWAN. — Thursday afternoon; July and August.

PORT STANLEY.—No holiday on account of tourists.

PRESCOTT.—No holiday except barbers on Wednesday afternoon, June, July and August.

RENFREW.—No holiday.

RICHMOND HILL.—Wednesday afternoon, July and August.

RIPLEY.—No holiday.

ROCKLAND.—No holiday. Close at 6 p.m. Tuesdays and Fridays, according to city by-law.

ST. CATHARINES. — Coy Bros., A. W. Moore, Watts & Bate, Ltd., hardware dealers, Wednesday afternoon, June, July and August.

ST. MARY'S.—Wednesday afternoon, July and August.

ST. THOMAS.—Wednesday afternoon, July and August. Grocers and butchers in May and June also.

SARNIA.—No holiday and no action contemplated.

SCHOMBERG.—No holiday.

SIMCOE.—Thursday afternoon; June, July and August.

SIMCOE.—Thursday afternoon; June, July and August.

SOUTH PORCUPINE. — No holiday. 6.30 p.m. Wednesday and Friday, except on 10th or 15th of month, or preceding a holiday.

STAYNER.—No holiday; close at 6 p.m. except on Saturday.

STIRLING.—Wednesday afternoon; July and August.

STOUFFVILLE.—No holiday. Close at 6.30 p.m. Monday, Wednesday and Friday.

STRATFORD.—No holiday.

STRATHROY.—Action contemplated.

STREETSVILLE.—No hodilay.

SUDBURY.—No holiday. All stores close not later than 7 p.m.

TILLSONBURG. — Wednesday afternoon, June. July and August.

TAMWORTH. — Wednesday afternoon, July and August.

TAVISTOCK.—No holiday.

WARKWORTH.—Wednesday afternoon, June, July and August.

WATERLOO.—Action contemplated, But depends upon action in Berlin. If anything is done, holiday will fall on Wednesday for summer months.

WESTON. — Close Wednesday afternoon during summer months.

WINGHAM.—Close Wednesday afternoons in July and August.

WEST TORONTO.—Wednesday afternoon the year round, as a general rule.

WINDSOR.—Grocers and butchers close Thursday afternoon the year round.

WOODSTOCK.—No half holiday.

A CORRECTION.

Owing to an error, the cut of No. 60 B. B. Wire and Rod Cutter in the Brown Boggs Co. advertisement, page 75, May 30 issue of Hardware and Metal, was inserted upside down.

"Be pleasant every morning until ten o'clock. The rest of the day will take care of itself."

Some Seasonable Suggestions

In the hardware store at this season of the year there are so many lines in demand that the hardwareman is often at a loss to know which lines to feature in his newspaper advertisements, or show windows. It often happens that if the hardwareman has an unprecedented demand for one or two lines he is liable to overlook the necessity of featuring others equally as seasonable, the result being that at the end of the season he is entirely cleaned out of some lines and has an overstock of others. Fortunate indeed is the merchant who can give each line the attention it deserves and so guide the selling end, that at the end of the Spring season he has very few overstocks on hand. Make sales "While the sun shines" and you won't have many dead dollars on hand when a new season arrives.

* * *

Put in a window display of all the little things that are needed around the home at the present time. There are hundreds of little things needed at this season of the year. Feature such lines as sprinkling cans, lawn rakes, grass shears, garden trowels, hose nozzles, hose clamps, screen door hinges, paint brushes, gas tubing, oil cans, sickles, rakes, hoes, window screens coil springs, ice picks, ice tongs, weeders, fly swatters, screen door catches, hedge and pruning shears, If you have no window space to spare try out a display counter or table in the store.

* * *

Hammock season is again with us. What are you doing to secure your share of the hammock trade? During the Spring rush did you forget to bring hammocks to the front? Have you featured them in your newspaper advertising? For people who do not own a hammock an advertisement featuring this line would have a strong attraction. The use of a suitable illustration would help to make your ad. more attractive. Some merchants are badly handicapped for sufficient display space to properly show their hammock line. Even if you have to keep your stock on the second floor or at the rear, it is a good plan to have three or four attractive designs displayed near the front entrance to the store.

* * *

Quite a number of retailers carried over refrigerators last year. It may have been the fault of the weather or it may have been lack of aggressiveness on the part of the retailers, or both. It is poor policy to wait until the real hot weather arrives before you start to feature refrigerators. Start now to get the public interested. Why not have one refrigerator in operation at the store? The cost of securing a supply of ice for two months will not come very high and you can rest assured that customers will appreciate your originality. An Ontario merchant tried the plan last year and he did not lose many sales. When customers entered the store to see refrigerators he was able to show one in operation and explain how foodstuffs could be kept in excellent condition during the real hot weather.

* * *

Do not forget the angling enthusiast. He is always ready to purchase anything that will assist him in his favorite pastime. The out-door sport enthusiast is also always with us and is interested in athletic goods. Make your windows work overtime during June. Work overtime with them if you find it necessary to do so in order to change the displays regularly. If you are not enthusiastic and willing to work hard during the month of June you are not a hardwareman.

* * *

We do not wish to become too personal but what have you done with the advertising matter which was sent in with your Spring paint order? How many posters are still in the corner in the rear warehouse? Has your delivery man decorated the stable with the handsomely enameled signs you received. or have they been placed in a prominnt place where they will help to draw customers to your store. Hope you are not like the hardwareman who last year put all his advertising color cards, etc., in an old revolving churn at the back of the store, where they were discovered by a paint traveler several months later.

The Established Business Policy of a Big Firm*

Too Many of Us Get on the Car of Business Without Having Any "Getting Off" Place in Mind—The Four Stones and Capstone of an Established Business Policy.

By Ben F. Corday.

IF YOU were to board a street car and say to the conductor that you wanted to get off at Twenty-third street, I suppose he would ring the bell at that street and you would get off.

But, don't too many of us get on the car of business without having any "getting off" place in mind, and after riding to the end of the line, we sometimes pay another fare to ride back again, and so we keep on going and going, making circles, so to speak, and finally, arriving at no place in particular, we "get off," sometimes by invitation and other times because our fare runs out.

Let's stop chasing the rainbow and come down to earth, applying common sense methods that will not only help us out, but our competitors as well. Let's be more generous to our competitors. Don't always accuse the other fellow—maybe we are to blame for some of the inconsistencies as much as he. Put the shoe on the other foot occasionally.

Here I am reminded of one of Mark Twain's stories.

Some years ago the famous humorist asked a neighbor if he might read a set of his books. The neighbor replied ungraciously that he was welcome to read them in his library, but he had a rule never to let a book leave the house. Some weeks later the same neighbor sent over for the loan of his lawn mower.

"I shall be very glad to loan you my lawn mower," said Mark Twain, "but since I make it a rule never to let it leave my lawn, you will be obliged to use it there."

This type of man is gradually becoming extinct. I believe we are learning to give as well as to take, and that the future holds much in store for us, if we will learn to give first.

I wonder how many of you have an established business policy—have a clearly defined idea of how your business should be conducted. Let me read you our established policy. A copy of this policy is signed by each individual member of the entire organization and filed away in our safe, but each member has a copy and is thoroughly familiar with this policy, both in letter and in spirit.

"We, the employees, officers and directors of the The Corday & Gross Company, recognizing that Justice is the greatest good and Injustice the greatest evil, do hereby lay and subscribe to, as the first stone of our policy, the greatest of all good.

Justice.

"The fullest meaning of this word shall be the basis of all our business and personal dealings—between ourselves as individuals, between our Company and those of whom we buy, and between our Company and those to whom we sell, as well as to our competitors.

"Justice shall be the first stone upon which we agree and determine to construct broader character as individuals and broader commerce as an institution. We realize that merit must be recognized whether in ability, or merchandise. With this certainty, we cheerfully, hopefully and courageously press forward to certain and unqualified success.

Co-operation.

"To accomplish the greatest possible results as individuals, and as an institution, we find Co-operation a necessity.

"We recognize that business without Co-operation is like sound without harmony. Therefore, we determine and agree to pull together and to freely offer and work with the spirit of that principle, Co-operation.

"So we shall grow in character and ability and develop individual and commercial supremacy.

"Difference of opinion shall be freely and fearlessly expressed, but we shall at all times stand ready to Co-operate with and heartily support the final judgment in all matters."

The third stone is

Economy.

"As each moment is a full unit in each hour and each hour is a full unit in each day, so each well-spent unit of thought and well-spent unit of action makes for each victory, and the final success.

"Life is like a bag in which, each moment, we place a unit of value or of rubbish, and our present and future happiness depends upon the contents or that bag.

"Recognizing that Economy is time, material and energy well spent, we determine to make the best use of them and so shall time, material and energy become our servants while we become the masters of our destiny."

The fourth stone is

Energy.

"As Energy is the power back of action, and action is necessary to produce results, we determine to energize our minds and hands, concentrating all our powers upon the most important work before us.

"Thus intensifying our mental and physical activity, we shall 'make two grow where one was,' well knowing that our individual and commercial crop of results will yield in just proportion to our productive and persistent activity.

"This power of Energy directed exclusively toward sound and vigorous construction leaves no room for destruction and reduces all forms of resistance."

The capstone of our Policy is

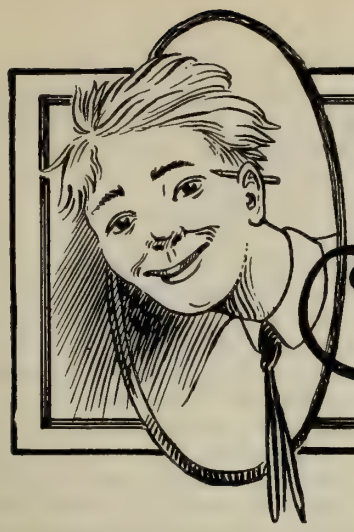
Service.

"We believe that the only sound and sure construction of success as an individual or an institution, depends upon the quality and quantity of Service rendered.

"We neither anticipate nor hope to be unusually favored by fortune, but we are thoroughly persuaded that fortune favors the performer of worthy deeds of unusual Service and we, therefore, determine that our days and our years be occupied with such performances.

"Quality shall always be the first element of our Service and quantity shall ever be the second consideration.

"Thus shall we establish not only the reputation but the character of serving best and serving most.



"Therefore, by serving admirably, we shall deserve and receive proportionately."

*Extract from an address delivered before the Printers' Cost Congress at Toronto.

Promotion for Paint Traveler.

E. W. Charlton, special representative of Brandram-Henderson, Limited, in Quebec city and Eastern Quebec province, has been promoted to the sales management of the Quebec division.

Mr. Charlton's promotion comes in recognition of his able conduct of business. He is one of the best known paint men of the eastern province, and has been recognized for years as a "premier" salesman in the paint trade.

THE JUNIOR CLERK'S PAGE

TRAVELER'S ADVICE TO A CLERK.

By H. G. M.

A traveler who calls on the retail trade gave this advice to a clerk with whom he came in contact during his visits to a certain merchant. "Always give a traveling salesman courteous and prompt attention. You never know what may come of it. For instance, about two weeks ago I was in the outer office of a large wholesale house and noticed a clerk from C—— having a talk with the proprietor. I knew the clerk just in a business way, and always found him bright, pleasant and seemingly energetic.

"The proprietor asked me, after the young man had left, if I were acquainted with him. I told him what I knew, and learned that he was applying for a position, so I was able to give him a boost. Salesmen often have opportunities similar to this, but it will also pay you in other ways, too!

"Say, did it ever occur to you that a salesman is not only a salesman, but a representative of the house, a man who should know all about the line he sells and that if you had some of that knowledge you would be of more value to your employer, making yourself ready for a place higher up. 'Knowledge is power,' so it is up to you to get some of that valuable information. Any good salesman is enthusiastic about his goods, and he will be glad to tell you whatever you want to know. Try it and see how much you can learn.

"I'll be around again soon and may be able to give up some more tips."

A WORD TO THE BOSS.

It would pay every employer and every manager to take this word of friendly counsel to heart.

If you want to improve your staff don't get on their nerves—get at their brains.

The nagging boss never cures the lagging assistant.

A policy of pin-pricks punctures the soundest enthusiasm in time.

You can no more henpeck a staff into doing their best than you can spank a howling child into a smiling good temper.

If you're always down on a man, it's all up with his chances of doing well.

It's the irritable master that makes the sullen servant.

The more snappish you are, the less "snap" will there be on the part of your men.

It doesn't pay you to have a dissatisfied staff. You won't grind dividends out of discontent.

A grumpy staff means an empty shop. Scowling faces frighten away customers.

Don't be annoyed if your men don't always share your opinions on business matters. You can't expect every one you employ to see the world through your eyes. You must make allowance for the personal point of view.

You're a fool to make your men mere imitations, mere parrot echoes of yourself.

Let them develop their own ideas. Make them men, not machines.

If you don't make the best of your men, you'll never get the better of your rivals.

If you want a man to use his head, don't treat him merely as a "hand."

A blunt employer is apt to say some very sharp things. That's all very well on occasion; but don't be everlastingly sneering at the stupidity of your staff.

A friendly pat on the back sometimes lightens a man's task more than a heavier pay envelope does.

Little kindnesses do more than big money to insure a loyal staff.

Better have a loyal staff of men who make mistakes sometimes than of clever discontented workers who simply loathe you, and don't care a tinker's curse whether the business goes down or not.

Don't you think so?

WHAT IS ELECTRICITY?

What is electricity?

The question was put directly to Dr. Charles Proteus Steinmetz, the famous expert of the General Electric Company, in the hope that he might be able, if not to tell what it is, at least to give a definite idea of what it may be. Dr. Steinmetz replied:

"Electricity is a loose term, used miscellaneously in referring to all matters electrical.

"To give it definite meaning one must know whether reference is made to electrical energy, electrical pressure, electrical intensity, or electrical quantity.

"Electrical quantity (represented in the electrical current) is generally assumed by scientists to be a substance with atomical structure, the unit of which is the electron.

"Electrical pressure is meant in referring to the voltage. Electrical intensity is the voltage per unit lengths.

"Magnetism is a similar term, which does not mean anything to the scientist. Two pieces of steel may have exactly the same structure, as far as science can determine, and yet one may contain magnetic quantity and the other be without it. Or the two may contain the same amount of magnetic quantity and have different magnetic intensity. Quantity times intensity equals energy.

"There may be the same quantity of water in two pipes and different pressure. Or there may be the same pressure and different quantity. If water, the liquid, water pressure and water power were all loosely called water, we should have the same confusion that the words electricity and magnetism suggest to the scientist."

"Is there such a thing as electricity?" he was asked.

"I cannot state positively that electrical quantity is a substance," Dr. Steinmetz replied, "or that there is such an atom as the electron. I say simply that this is the most commonly accepted theory."

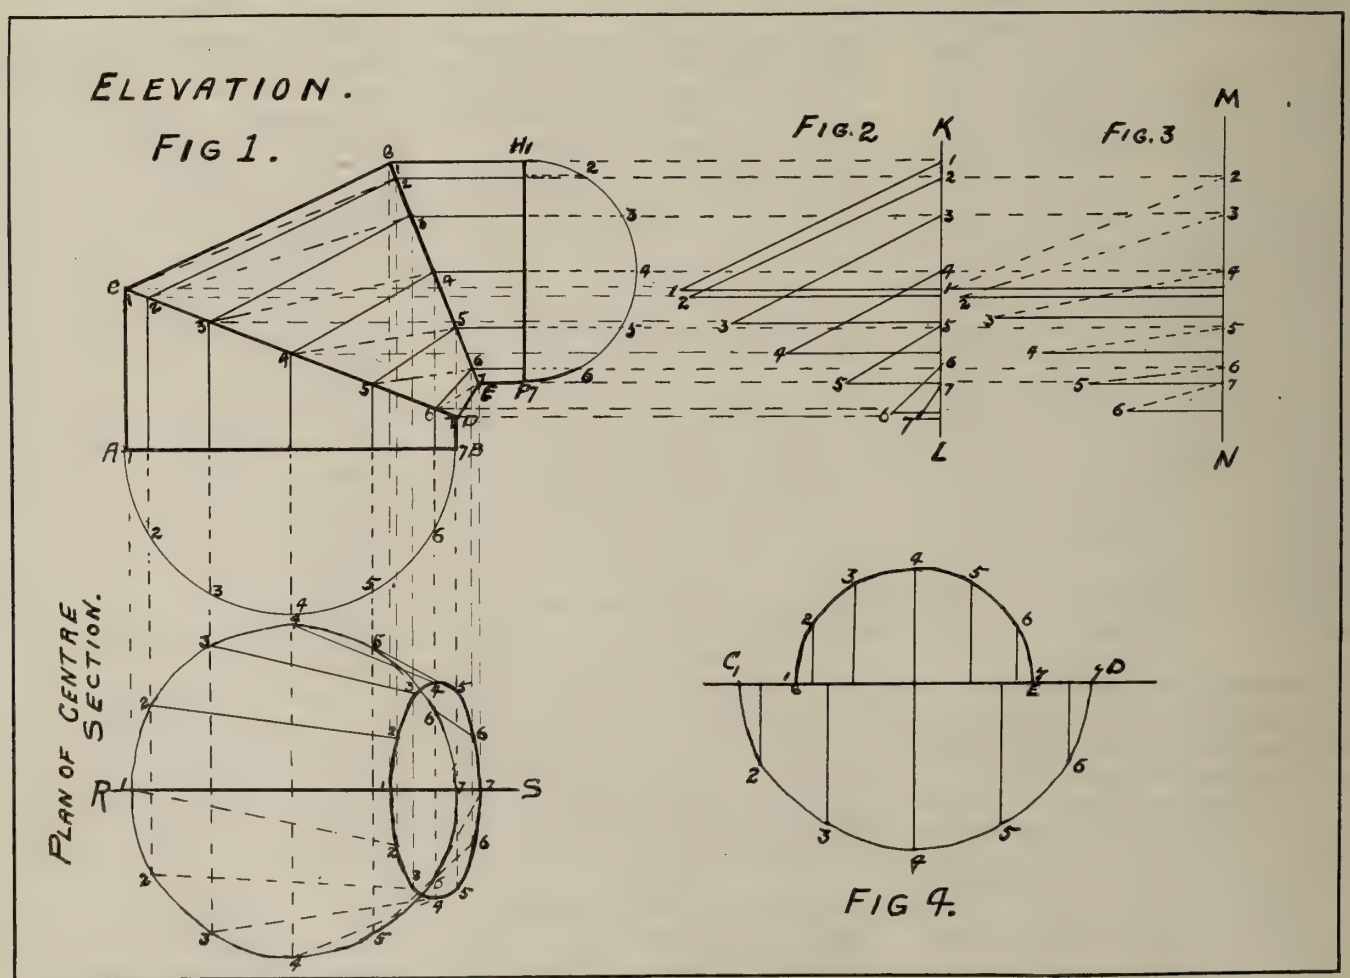
Which leaves us just where we were at the beginning. In other words, no one can say that there is such a thing as electricity. And all that has been written and said about electrons is based upon nothing but a hypothesis.

Problems in Sheet Metal Work

IN the problem presented here we show a three-pieced tapered elbow, with all the taper in the centre section. This makes a neat elbow, and has several good points, such as not requiring as much height as an ordinary tapered elbow. Both ends being straight, they make a better joint with other pipes than when tapered. with the further advantage that the pattern of the centre-piece only need be developed, as the two end pieces are made with the regular three-piece pattern.

In elevation Fig. 1 we show a three-piece elbow. To lay out same proceed as follows:—Erect on a line, say A-B, one section of a three-pieced elbow, as shown by A, B, C, D, the diameter of which is the large end of the required elbow. At right angles to B-D mark line as E-F, on which line erect E, F, G, H, being one section of a three-pieced elbow, the diameter being the size of the small end of required elbow.

Connect points C-G and D-E, completing elevation of elbow.



On the base lines A-B and F-H draw a half circle, and divide into an equal number of parts as shown by 1, 2, 3, 4, 5, 6, 7. From the points thus obtained draw lines at right angles to the base lines and continue them on until they meet the mitre lines C-D and G-E. Continue these lines across centre section connecting point 2 on C-D to point 2 on G-E, 3 to 3, etc. Connect point 1 on mitre line C-D to point 2 on G-E, with dotted or broken lines, point 2 to point 3, 3 to 4, 4 to 5, 5 to 6, and 6 to 7.

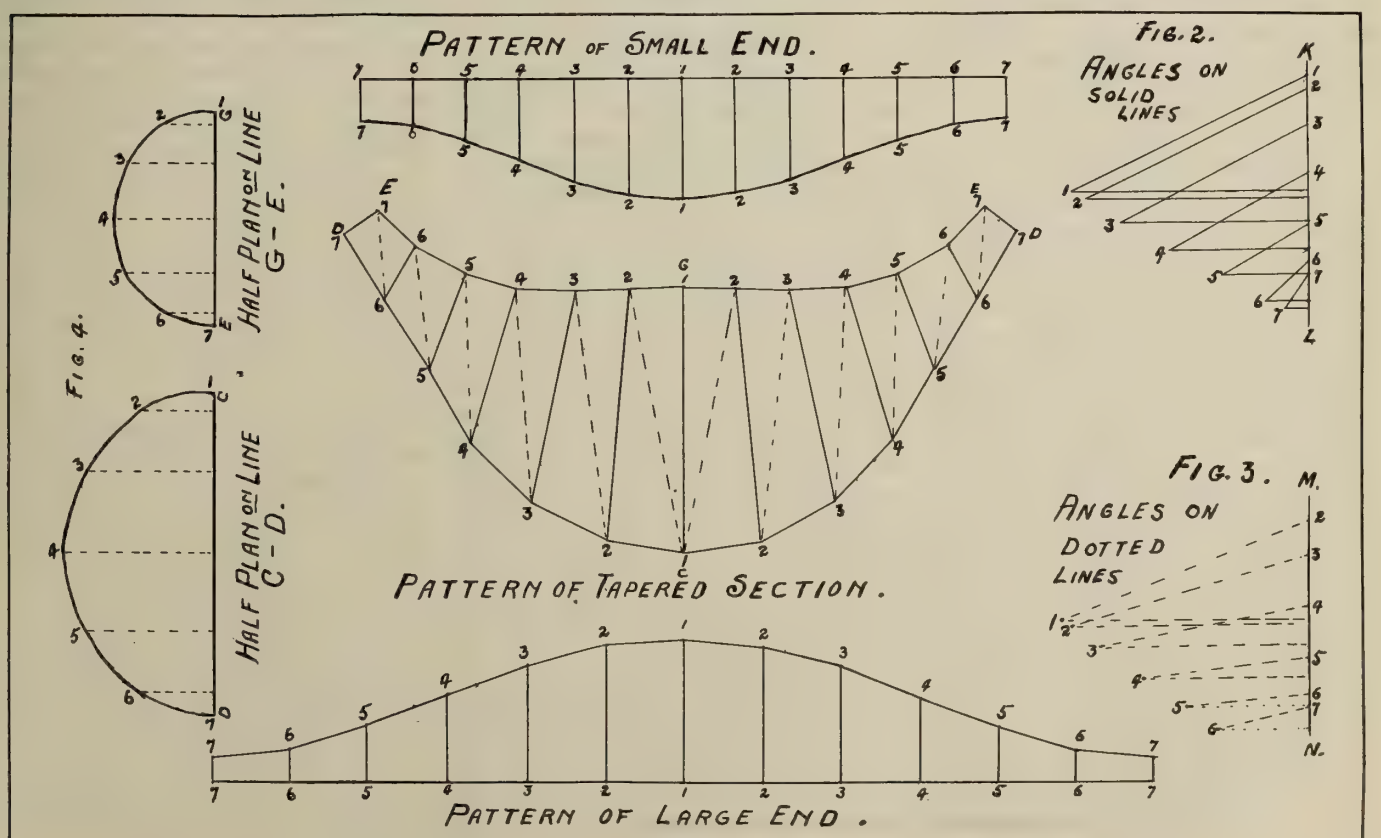
The next step is to lay out the height of the different triangles. Parallel with H-F draw two lines as K-L and M-N. From the different points on mitre lines C-D and G-E draw lines parallel to A-B until they meet lines K-L and M-N, the points marked by solid lines being marked on line K-L and the points marked by broken lines on line M-N. This gives us the height and the base line of the triangle, but we have yet to obtain the measurement of the base lines.

To get these we must first make a plan of section C-G-D-E. Then draw a line as shown at R-S, parallel to A-B, extend centre line 4-4 from A-B until it meets line R-S; with this point as a centre draw a circle of the diameter of A-B.

At right angles to R-S draw lines from points 1, 2, 3, 4, 5, 6, 7 on mitre line G-E, then with the compases mark out on these lines from R-S the distance from H-F to the points in half circle, the distance from H-F to point 2 being placed on line drawn from point 2 on mitre line G-E, H-F 3 on line from point 3, H-F 4 on line from point 4, H-F 5 on line from point 5, H-F 6 on line from point 6. H-F 1 and 7 centre lines in plan are on line R-S; a line drawn through the points thus obtained completes plan of centre section C-D, G-E.

On the plan draw solid lines connecting points 1 to 1, 2 to 2, 3 to 3, 4 to 4, 5 to 5, 6 to 6, 7 to 7, the distance from point to point being the base of triangles formed by solid lines on elevation.

With the compasses take distance from points 1 to 1 on plan and mark out from K-L on the line drawn from point 1 on mitre line C-D. Draw a line from point thus obtained to point on K-L drawn from 1 on mitre line G-E. The distance between these two points is the exact length on pattern between points 1-1 of the centre section. Take distance 2-2 on plan and mark out from K-L on the line from point 2 on mitre line C-D. A line drawn from this point to point 2 drawn from mitre line 2 E gives distance between points 2-2 of centre section. Proceed with points 3-3, 4-4, 5-5, 6-6, 7-7 in the same manner.



On the plan draw dotted lines connecting point 1 of large diameter to point 2 of small diameter, 2 to 3, 3 to 4, 4-5, 5-6, 6 to 7. With the compasses take distance from point 1 to point 2 marked by dotted lines, and mark out from M-N on line drawn from point 1 of mitre line C-D. Draw line from point thus obtained to point 2 M-N drawn from mitre line G-E. This gives the exact length between point 1 on C-D to point 2 on G-E. Repeat with 2-3, 3-4, 4-5, 5-6, 6-7, the triangles formed by lines on M-N being the ones formed on dotted lines on elevation.

In Figs. 3 and 4 we have the distance between the two lines C-D and G-E, but before we can draw the pattern we need the shape of elbow on the mitre lines C-D and G-E, in order to get the proper circumference of them on these points. To obtain these proceed by taking a line as C-D on Fig. 4, on which mark the space between 1-2, 2 to 3, 3 to 4, 4 to 5, 5 to 6, 6 to 7 on the mitre line C-D. From these points draw lines at right angles to C-D. On these lines, 1, 2, 3, 4, 5, 6, 7, mark out from C-D the distance from line A-B in elevation to points in half circle, point A in elevation being point C in Fig. 4, from line A-B to point 2 being placed from line C-D on line 2. Repeat with other points. A line drawn through the points thus obtained in Fig. 4 gives a one-half profile or shape of elbow on line C-D. Proceed in a similar manner. The spaces between 1, 2, 3, 4, 5, 6, 7 on profiles in Fig. 4 give the circumference on the lines C-D and G-E.

The two end pieces can be developed in the regular way from elevation. For the pattern of the centre section, proceed as follows on a line as shown, mark off a distance equal to 1-1 in Fig. 2, with the compasses take the distance point 1 to 2 in Fig. 3, and with 1-C of pattern as a centre, strike an arc near point 1 at G-1, with distance from G 1 to 2 in Fig. 4 and G 1 on pattern as a centre strike an arc cutting arc struck from C 1. A dotted line should be drawn from the point obtained to C 1 to keep tab on the work as it proceeds.

With 2-2 in Fig. 2 and with point 2 just obtained as a centre, strike an arc near C 1; with C 1-2 in Fig. 4 and C 1 of pattern as a centre strike an arc cutting one just made; with 2-3 in Fig. 4 as a radius and point 2 just obtained as a centre, strike an arc near point 2 on upper part; with 2-3 on small profile as a radius and point 2, small end, as a centre, strike an arc cutting one just made. Where these meet is point 3 of small end. With this point as a centre and 3-3 of Fig. 2 as radius, strike an arc near 2 of large end; with 2 of large end as a centre and 2-3 of large profile in Fig. 4 as a radius strike an arc cutting one just made. Where these arcs meet is point 3 of large end. With this point as a centre and 3 to 4 on Fig. 3 as a radius, strike an arc near 3 of small end; with 3 of small end as a centre and 3 to 4 of small profile as a radius strike an arc cutting one just made. Where these arcs meet is point 4 of small end. With point 4 just obtained as a centre and 4-4 of Fig. 2 as a radius, strike an arc near point 3 on large end; with point 3 on large end as a centre and 3 to 4 of large profile as a radius, strike an arc cutting one just made. The points where arcs meet is point 4 of large end. With point 4 just obtained and 4-5 on Fig. 3 as a radius, strike an arc near 4 on small end; with 4 on small end as a centre and 4 to 5 on small profile as a radius, strike an arc cutting one just made. Where arcs meet is point 5 on small end. With point 5 as a centre and 5 to 5, Fig. 2, as a radius, strike an arc near point 4 on large end; with point 4 on large end as a centre and 4 to 5 of large profile as a radius, strike an arc cutting one just

(Continued on page 54.)

TEN CENT LIMIT.

The little game of business played by the F. W. Woolworth Company in its 680-odd stores, where the price of goods is limited to 10 cents, produced some astounding results in 1913, when total sales of $66,228,072 created a new high record for the annual turnover. The gross earnings of the Erie Railroad, amounting to $62,647,359, were $3,580,713 less than Woolworth's; the New Haven road, with $68,613,503, was only $2.385,431 ahead, while the Adams Express Company, with approximately $35,000,000 gross, showed earnings slightly more than 50 per cent. of Woolworth's.

Some of the individual items that produced the result seem unbelievable.

Sales of jewelry of the 5-cent and 10 cent variety, amounted to $2,500,000, a gross business of which few jewelers can boast. The country is now musically inclined and in furnishing its supply of the demand the Woolworth Company sold $1,500,000 worth of sheet music. The candy counters were the Mecca for sweet-tooths and resulted in sales of $8,500,000 worth of confectioneries.

The Woolworth stores in 1913 distributed 1,200,000 ten-cent bottles and 360,000 five-cent bottles of peroxide of hydrogen. They sold 43,000,000 clothes pins, or enough to fill 40 freight cars. The 27,576,000 pair of hose sold during the year furnished one out of every four persons in the United States with a pair of stockings. The many mysterious ways in which women use and lose hairpins resulted in the sale of 372,000 pounds of that commodity.—Wall Street Journal.

SALES PSYCHOLOGY.

"I'm merely looking around to-day," is the most frequent answer received by the smart salesman, who greets the customer at the door or close by. Possibly though, this discouraging answer may be due to the form of the salesman's questions, coupled with the absence of a real intent to purchase. Such a one, who is asked by the salesman, "Anything I can do for you?" or some question of a similarly doubtful character, is quite likely to allow it to clinch the matter for him by replying in the negative. On the other hand, if the question had been positive in its nature, aggressive,—in fact, a statement rather than a question,—the customer would as likely as not have decided the other way about, through the sheer force of auto suggestion. In short, the salesman's approval, his clever assumption that there was no doubt about the intent to purchase, else the customer would not have come to the store, decided the matter for the customer, who as likely as not, had no definite intentions one way or the other.

God helps those who helps themselves and there are too many clever fellows, waiting around the corner for your prospect for it to be necessary for him to cultivate the salesman.

It is a case of the latter studying the mental attitudes of the genus prospect and playing on the delicate strings of it so that they answer his every touch.

ENTHUSIASM.

What is the prime requisite for business success?

Enthusiasm, first, last and all the time. To the man who can bring to his work that one all important quality, others come as a matter of course. We may smile at the boy-like exuberance of Smith as he descants upon the superior virtues of the new lawn mower he has in stock, but we will probably, like Goldsmith's friend "who came to scoff, and remained to pray," end by buying it. Our smile, at its worst, is one of tolerance, that, as we follow the tumbling torrent of Smith's explanation, gives way to attention and finally to questions—and Smith's enthusiasm stands on its own legs. No man can be enthusiastic who does not believe in his goods. He can't believe in them unless they are honest goods. Honest goods sell. Simple, isn't it?

THE MAIL ORDER BOGEY.

Of all the plans that have been tried out to offset the inroads that the mail order house has been making on the business of country merchants, from plain beefing to the most aggressive warfare, none has been found so effective as fighting the devil with fire. In other words, the men who have adopted mail order methods for their own use are the men who have turned victory into defeat.

Why waste time in costly experiments? It has all been done for us free of charge by a high priced corps of experts, who have given us in the mail order catalogue and the efficient methods behind it, the last word in merchandising. It has been through a process of elimination that has covered a period of years that the small merchant cannot afford and would be foolish to attempt to duplicate.

The cost of getting out a small and compact catalogue of hardware goods is infinitesimal. You will have most of them in stock. It is a mere trifle if the reverse is true. Jobbing houses are so situated as to serve the largest possible territory promptly. Explain the needs of the case to your jobber and he will be only too glad to assist you by filling your orders promptly. Under such a plan, the small dealer has the advantage over his huge rival in that he does not have to carry the complete stock and can still fill orders quite as promptly as the other.

GALVANIZED POULTRY FENCE.

The Steel Co. of Canada have put on the market a galvanized poultry fence perfectly galvanized. This poultry fence is a true woven wire fence and not netting, large wires without increased cost. It is made of No. 9 top and bottom wires, No. 13 intermediates and stays, and is done up in 10, 20, 30 and 40-rod rolls. It is hard, stiff and springy. It carries a coat of zinc put on by the latest method, and a great improvement in galvanizing zinc coating, that stays on and never comes off.

This poultry fence, which is called "Invincible." saves, it is said, in cost of erection, because it requires fewer posts, while top and bottom rails are not needed to keep the fence in shape.

PROBLEMS IN SHEET METAL WORK.

(Continued from page 53.)

made. Where arcs meet is point 5 on large end. With point 5 just obtained as a centre and 5 to 6 on Fig. 3 as a radius, strike an arc near 5 on small end; with 5 on small end as a centre and 5 to 6 on small profile as radius, strike an arc cutting one just made. Where arcs meet is point 6 on small end. With point 6 just obtained as a centre and 6 to 6 on Fig. 2 as a radius, strike an arc near point 5 on large end; with point 5 on large end as a center and 5 to 6 on large profile as a radius, strike an arc cutting one just made. Where arcs meet is point 6 on large end. With point 6 on large end as a centre and 6 to 7, Fig. 3, as a radius, strike an arc near point 6 on small end; with point 6 on small end as a centre and 6 to 7 of small profile as a radius, strike an arc cutting one just made. Where arcs meet is point 7 of small end. With point 7 just obtained as a centre and 7 to 7 on Fig. 2 as a radius, strike an arc near point 6 on large end; with point 6 on large end as a centre and 6 to 7 of large profile as a radius, strike an arc cutting one just made. Where arcs meet is point 7 of large end. Draw line from points 1, 2, 3, 4, 5, 6, 7 on each end and from 7 to 7, and we have one-half the pattern. When laying out pattern, if we work from the centre line both ways, as shown on drawing, we have the pattern of centrepiece complete.

Current News of the Hardware Trade

Obituary.

The death occurred at Ingersoll, Ont., of Walter Mills, a member of the firm of Nagle & Mills.

Moved Offices.

The Schuchardt & Schutte Co. have moved their head office for Canada from Montreal to 42 Adelaide Street West, Toronto.

Fire Losses.

Toronto, Ont.—E. McGillvray, hardware, suffered loss by fire.

Wallaceburg, Ont.—The plant of the Canada Flax Mills, Ltd., was damaged by fire.

Regina, Sask.—Damage to the extent of $25,000 was done the Peart block here by a recent fire.

Business Changes.

Taber, Alta.—A tinsmith business has been opened by E. J. Franklin.

Roland, Man.—J. E. Birch & Son, hardware, have sold out to M. Horn.

Huntoon, Sask.—The firm of Walter and Gillespie have opened a hardware store.

Stonewall, Man.—W. Seed has purchased the hardware business of E. C. Vincent.

Brock, Sask.—W. L. Kiel has replaced W. L. Kiel and Co. as proprietor of their hardware and furniture business.

Industrial.

Kingsville, Ont.—The Dominion Stove Co. will erect a plant to cost $12,000. J. C. Pennington, La-Belle Building, Windsor, Ont., is the architect.

Medicine Hat, Alta.—The Pump and Brass Works are making considerable extensions to their plant, and adding to their stock of patterns and equipment. Geo. E. McDonnell is manager of the company.

The Kawneer Mfg. Co., of Toronto, Ont., has purchased a site covering seven acres at Guelph, Ont., where they will build a factory 40 x 500 feet for making art metal mouldings for store fronts, etc.

Ontario Corporations.

The Hoover Electric Cleaning and Service Company, Ltd.; capitalized at forty thousand dollars. The company will manufacture and renovate all kinds of household equipment. Head office will be in Toronto.

The Union Cement Co., Ltd., has been incorporated for the purpose of the acquiring and preparation of Portland cement material, building stone, etc. The Company is capitalized at two hundred thousand dollars. Head office will be in OwenSound, Ont.

New Firms.

Montreal, Que.—A. Goyette & Fils, hardware, have registered.

Retlaw, Alta.—The Devereaux Hardware Co., of this place, have built a new machine warehouse.

Mazinod, Sask.—J. W. Winters & Sons are building a new two-storey metal-clad, fireproof hardware store.

Wadena, Sask.—It is stated hat H. C. Pierce will open up a large business in lumber, hardware and building supplies.

Preston, Ont.—W. Jones, late of the Metal Shingle and Siding Co., will open up a tinsmithing and furnace installation business in the near future.

Travers, Alta.—The McGregor Hardware Co. has opened a store here in tent quarters, and as soon as the townsite has been placed on the market will erect a two-storey building. The new branch is in charge of H. A. MacNeil. Travers is reached via Sweet Valley, Alta.

Personals.

Fort William, Ont.—Chas. Goodeve, formerly of J. & T. M. Piper, is the new manager of the West Ward store of the Fort William Hardware Co.

F. F. Barber, who is in charge of the machine tool sales department of the Canadian Fairbanks-Morse Co., Toronto, was married on June 3 to Miss E. W. Walker, of Toronto.

Colonel Robert Starke, of the Third Victoria Rifles, and Charles Smith, of the 65th Highlanders, will be absent from work at Starke, Seybold & Co., Montreal, to attend the annual camp at Three Rivers, next week.

Monahan Bros., St. Lin; J. F. Corriveau and Arthur Laberge, of Chateauguay; G. Marquis and Corriveau Frere, of St. Genevieve; Arthur Desjardin, St. Jos. du Lac; E. C. Whinfield, Calumet, and A. Lemieux, of Henryville, Que., were among the out of town buyers in Montreal this week.

J. T. Craig, of E. T. Wright & Co., Hamilton, Ont.; J. C. Wilson, of Lovell Mfg. Co., Erie, Penn.; Prescott W. Robinson, of the H. & R. Arms Co.; M. J. Fultz, of American Pad & Textile Co., Chatham, Ont.; A. A. Seligman, of L. B. Wasserstrom, New York; and S. R. Nicholas, of Ashton Mfg. Co., Newark, N.J., were calling on the trade in Montreal this week.

The Empress of Ireland Disaster.

Montreal.—The great loss of life on the C. P. R. steamer Empress of Ireland last Friday has been the main topic of conversation in the hardware trade here. Not only has there been a lot of discussion as to the cause of the collision and the loss of well-known people, but in several instances the awful tragedy of the sea struck close home. One of the victims was Miss Waneta Crathern, a niece of George Caverhill, of the firm of Caverhill, Learmont & Co. She was on her way to England to join Mrs. Caverhill and family, who are now visiting in the old country. Her body was recovered and brought to Montreal, where the funeral was held on Tuesday afternoon from the residence of Mr. Caverhill, 166 Drummond Street, to Mount Royal cemetery. A very large number of friends attended. Among the floral tributes was a wreath from the staff of Caverhill, Learmont & Co.

Another victim of the grim tragedy was Mrs. Seybold, wife of Edward Seybold, of Ottawa. Mr. and Mrs. Seybold were sailing together for England and it was the irony of fate that he should be saved and his helpmate taken from him. Mr. Seybold is a brother of J. P. Seybold, of the Independent Cordage Co., Montreal, and Mrs. J. P. Seybold and the deceased lady were sisters. On their way to Quebec to take the steamer Mr. and Mrs. Seybold visited their brother and sister in Montreal, also their nephew, Herbert Seybold, of Starke, Seybold & Co. Mr. J. P. Seybold then accompanied them to Quebec. It was only a short time later that word came of the awful disaster and the conflicting reports of the names of the rescued and lost, in which the names of Mr. and Mrs Seybold alternately appeared. Finally came the word that Mr. Seybold was safe, and later the body of Mrs. Seybold was found after a search of over 250 bodies. The funeral was held in Ottawa on Monday from the residence of another brother, J. A. Seybold, and was attended by many relatives and friends. J. P. Seybold and Herbert Seybold, of Montreal, attended, as did also another nephew, Gordon C. Seybold, of the Cochrane Hardware Co., Sudbury, Ont.

It will be gratifying news to many people in the hardware trade to learn that A. O. Hurst, representative of Tonk's Limited, of Birmingham, Eng., was among the survivors. Mr. Hurst had

(Continued on page 62.)

"THE KNACK OF SELLING."

The System Magazine, Wabash avenue and Madison avenue, Chicago, have issued an excellent set of booklets on the topic of salesmanship under theh title "The Knack of Selling." They summarize in a very attractive and informing way some of the best principles of salesmanship. The books are titled "Mapping out the Canvass," "Managing the Interview," "How and When to Close," "Finding and Correcting your Weak Points," "Getting in to See a Prospect," "Acquiring the Art of Mixing." The books are written in an attractive and readable style, while numerous illustrations from the experience of successful salesmen increase the value of the set. To many salesmen some of the individual suggestions will be easily worth the cost of the whole set of books, which sells for $5. The books are convenient in size and shape to carry in the pocket for utilization in spare time. The value of this series as of so many others of a similar nature depends of course, largely upon whether or not the salesman will put the principles and methods into practice. If he does there is no doubt of the usefulness of the volumes.

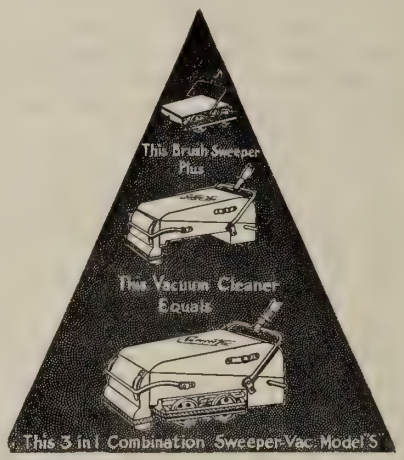
EFFICIENCY.

Rivers was angry, justly so, he thought. "What right had the boss to lecture him on the disposal he made of his own time!"

"You don't understand, Mr. Watson. Even though I do play a little poker now and then it is always in my own room or in that of one of the other fellows. I never go down to Mur—."

"I understand only too well," interrupted the other firmly. "As you say, you don't frequent Murphy's dive. But what of that? The same spirit that animates the habitues of his place animates you in your more respectable quarters. Mark my words," and he shook his finger at Rivers, not threateningly, but in kindly advice—"your game may be small now; but it will get bigger. There is always someone who gets tired of the reasonable ante. Some one will lose—perhaps it will not be you. But you will be more unlucky still if you win. Easy come, easy go. You can't get away from it. I know. I have been through the mill and I am giving you free of charge what it cost me thousands of dollars to find out. At the best you will lose a lot of sleep, and if you win, your salary will appear small by comparision. Your thoughts will be on the night's game instead of on the work in hand. There will be a general lowering of your moral standards and a consequent loss in general efficiency that all the money in the world cannot give you."

Rivers flushed with the embarrassment that had replaced his earlier anger: "Mr. Watson I've heard gambling preached against all my life, but never in that way. It was just a case of being bad in general and sure to lead to damnation. But I was never shown how it could hurt a fellow before. I'm through."



COMBINATION SWEEPER.

Sweeper-Vac Limited, Montreal, are now offering to the Canadian hardware trade a combination carpet sweeper and vacuum cleaner. They have appointed

Showing part of mechanism.

selling agents in the various provinces of the Dominion. One of the features of this cleaner is that the sweeper may be used separately or in combination with the vacuum cleaner. The combination cleaner in one operation is said to remove all thread, lint, hair and from a cupful to a quart of solid dirt from a rug after it has been beaten. The machine has auto-roller bearings and is easy-running, durable and mechanically cor-

Sweeper-Vac Models.

rect. The little carpet sweeper is so hung underneath the vacuum cleaner member that it is in what is called "floating adjustment." This means that when the combined machine is being run over the floor the carpet sweeper will raise or lower itself to meet the surface to be cleaned without interfering with the suction nozzle of the vacuum cleaner member. The accompanying illustrations give a god idea of the machine.

WANT BUSINESS TAX ABOLISHED.

Winnipeg, June 4.—(Special).—The business tax was the chief subject discussed at the last meeting of the Winnipeg branch of the Retail Merchants' Associatnon, J. A. Banfield presided.

Alex. Munro, in describing the present ssytem of business tax as iniquitous, stated that six retal agents controlled about three-fourths of the rental properties in Winnipeg. He declared that it was outrageous that their business tax should be thus automatically increased whenever these retal agents decided to increase their rents. Mr. Munro contended that the business premises of retail merchandising should be assesse retail merchants should be assessed from the city hall according to the assessment value of the property, and not at the whim of any rental agent.

Ald. Milton expressed his approval of the lines on which the association was working to get the present inequalities remedied. He declared that the Board of Control, while in sympathy with the retail merchants, must be assured of their backing, and he urged every merchant to affiliate with the association and thus augment its strength. Ald. Milton deprecated delay and reminded the members that the assessment commissioner was now busily engaged in preparing the assessment list for next year.

J. A. Banfield, in winding up the debate expressed his intention of taking definite action in the matter, and intimated that the business tax committee would have a definite proposal to submit at the next meeting.

There was a marked divergence of opinion on the advisability of endorsing a weekly half-holiday for the retail trade, tohse taking part being chiefly grocers, butchers, or bakers. Some members declared that a weekly half-holiday was impracticable without a compulsory city by-law, while certain members expressedl treis hrdluhrdluy members expressed their intention of giving their assistants a half-holiday in turns. Other merchants preferred to give their employees a full week's holiday during the year instead of sundry half days during the summer months. It was also pointed out that civic holidays which did not coincide with the weekly half-holiday caused confusion among the public. Finally, a committee composed of W. J. Sutherland, W. R. Milton and A. Gronbach, was appointed to consider the matter and report at the next meeting.

C. F. Rennard was elected treasurer.

Brampton, Ont.—The ratepayers of this city have voted to grant tax exemption and a guarantee of bonds for a period of years of the Imperial Iron and Steel Co.

New Goods Offered Canadian Hardwaremen

NIAGARA FARM GRINDERS.

The Carborundum Co., Niagara Falls, N.Y., is offering the Canadian trade the Niagara farm grinder No. 17 here illustrated. The new machine is of the direct drive type. The frame is built of steel tubing, light, yet strong. The machine

Niagara farm grinders.

is designed along clean attractive lines and is rigid and nicely balanced.

The drive is supplied by means of strong durable pedals acting on the main gear or drive. The main gear meshes with the gear on the driving shaft leading to the grinding head. There is no lost motion, no unnecessary vibration. The gears are cut and are so accurate that the machine is practically noiseless.

The saddle is adjustable both for height and distance from the pedals. The machine is about forty inches high and is supplied with several attachments if desired.

For general grinding and for tool sharpening the grinder is fitted with two regular carborundum wheels, 7 inches in diameter. One wheel is of fine grit and the other of coarse grit. For grinding harvester sections with this machine a special grinding device is furnished. The section is held in an adjustable spring clamp. By simply releasing the clamp the sections can be fed along so that every blade can be accurately ground. Two supporting rods travel along a lower guide rod giving the device strength and rigidity. The whole device is quickly fitted to the machine. For this work a special beveled wheel 6 inches in diameter and 3½ inches thick is supplied.

For grinding harrow discs the machine can also be fitted with a novel yet practical device, which consists simply of an arm and clamp for holding the disc over the grinding wheel, as shown in the accompanying illustration. The holder is adjustable, so that the disc can be ground at any desired bevel. The action of the wheel causes the disc to revolve and a true edge or bevel is maintained all around.

CRU-STEEL RAZOR.

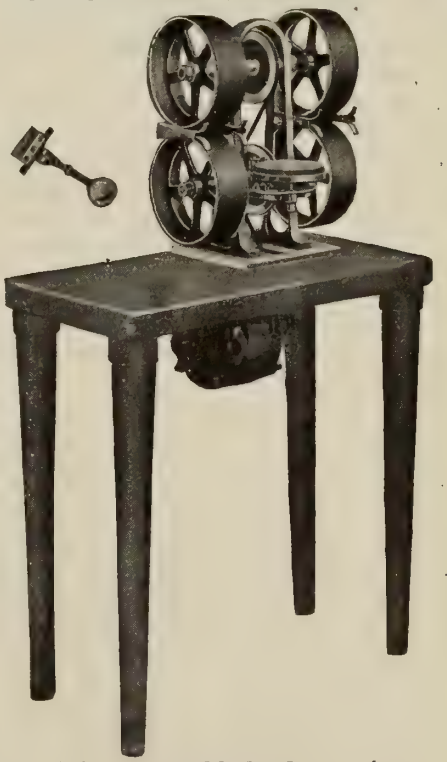
Kampfe Brothers, 8-12 Reade Street, New York, are offering the Canadian trade the new Star Cru-steel razor, No. 276. The makers claim that the new

Star cru-steel razor.

razor is substantial in construction, smooth finish, with no unnecessary parts to collect dust and has perfect adjustment for shaving.

All you have to do is to push spring in back of frame down into notch—then slide blade into place. Release spring from the notch; it will catch the heel of blade and hold it absolutely fast for shaving. To remove blade after shaving push spring back into notch and blade will easily slip out.

Following is a description of the new razor:—



One-piece nickel-plated brass frame, rigid, scientific adjustment for easy shaving, no complicated locks or unnecessary bars. Solid heavy brass nickeled handle with extra stropping attachment. Twelve cru-steel blades, highest quality extra heavy rolled crucible steel, with special reinforced spring grip back, Damascus finish.

Steel shell case, covered with waterproofed leather vulcanized fast, wears like iron, lined with purple velvet. The spring in cover is always a positive lock, no uncertain button or slide locks to worry about.

Individual patented holding receptacle inside, every part handy, easily removed by a mere touch, but when in place the case can be thrown about and no part will fall out. An ideal arrangement for home or travel, on washstand, in vest pocket, in grip or trunk—always ready.

MODEL C HILL MACHINE.

The A. E. Hill Mfg. Co., Atlanta, Georgia, are offering the Canadian trade the Hill C. machine, here illustrated, for the rapid sharpening of safety razor blades. The machine is not automatic and the chief feature in sharpening is securing the human touch in the manipulation of the blade. The makers claim that this feature has been thoroughly and scientifically retained in the Hill machine. The Hill universal blade-holder is said

Safety razor blade sharpening machine.

to hold every make of blade, enabling the operator to give individual attention to each blade and make convenient hair test.

The motor is small and uses about five

(Continued on page 60.)

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

The recent period of warm weather has had a beneficial effect upon the majority of hardware lines. The metal markets are still quiet. A sharp decline in the price of tin took place at Toronto. The demand so far this year for linseed oil and turpentine is below the demand during the corresponding period of last year.

In the West the crops are being watched closely and future business will be largely dependent upon crop conditions. The demand for ready-mixed paints is holding up well. Summer stoves are in good demand, but fall booking is backward. Buyers of hardware are still cautious and orders are chiefly for immediate needs.

MONTREAL.

MONTREAL, June 4.—Business has fallen off slightly during the past week, but it is not expected that this is anything but a temporary lull. The volume of trade thus far this season compares very favorably with last year, despite the fact that the weather was unfavorable early in the year. Collections have been better lately, and the jobbers are looking to the future with optimism.

Nails and Screws.

There has been no change in the quotation on wire nails yet, and they are still offered at $2.20 base, Montreal. There is a strong feeling, however, that an advance is due, and may be expected at any time. The quotation on cut nails is $2.50 base, Montreal. Screws are unchanged at the discounts listed in the current market quotations. Copper rivets and burrs are now quoted by Montreal jobbers at the new list price of 35 and 12½ per cent.

Metals.

Metal markets are still very weak, and there has been very little change since last week. Lead, domestic and imported, is being quoted at $5.10. Tin is still quoted at 40 to 40½c, the price to which it went last week. Antimony is unchanged at $8.50, and spelter, $6. Copper remains at $16 per 100. Quotations on brass are unchanged at the figures listed in current market list. The quotations on solder are: Tinkers' bar, 28c; wire solder, 25½c; half-and-half, 24½c; wiping solder, 20 to 30c.

Bar Iron.

The quotation of $2 to $2.05 on bar iron, base, Montreal, has not been altered. The market is steady.

Lead and Lead Waste Pipe.

There is a fair demand for lead and lead waste pipe at 7½ and 9 cents respectively, with discount of 7½ per cent. Traps and bends are 40 per cent. off list. Medium and extra heavy soil pipe up to 6-inch is quoted 65 per cent. off, and 7 and 8-inch, 45 per cent. off.

Stoves, etc.

There has apparently been little let-up in the demand for gas stoves this spring, and a feature of the business has been the increased interest shown in the better grade lines. Oil stoves and camping stoves have also been selling well. Enamelware has also been in good demand.

Rope, Twine, etc.

There has been a good output of all lines of rope, and this condition is likely to continue all through the season, as the requirements of navigation keep the demand active. Binder twine is also selling well now, and will probably be wanted right along. Prices are unchanged as follows:—Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are:—Best Manila, 650 feet to pound, 13½c; Manila, 600 ft., 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

Wire Cloth, Screens, etc.

Repeat orders are coming in freely for wire cloth, wire screens and similar lines. Quotations on wire cloth are as follows:—Painted screen, in 100-foot rolls, $1.55 per 100 sq. ft.; in 50-ft. rolls, $1.60 per 100 sq. ft.; rustless screen cloth, 7c sq. ft.; cut lengths, 8c sq. ft.

Sporting Goods.

There has been a steadily increasing demand for sporting goods of all kinds. Baseball goods have been particularly active. Hammocks and tennis goods have also been selling well. There has been a better sale for cricket supplies, and croquet sets likewise have been among the active lines.

TORONTO.

TORONTO, June 4.—The recent period of warm weather has had a beneficial effect on the trade generally, and the demand for summer lines has been stimulated to a considerable extent. The chief changes during the week have been in the prices of tin and lead.

Changes in Metals.

The chief feature of the metal market during the past week was the drop of two cents per pound in the price of tin, making the ruling quotation at Toronto 33c per pound.

Tin is now considered at a very attractive level, and the lower price should produce buying. Lead has advanced 15 cents per 100 lbs., and is showing remarkable strength in the face of present conditions. Toronto quotations range from $5.15 to $5.50 per 100 lbs.

Copper remains unchanged, and is quoted from 15c to 16½ lb.

The general condition of the metal market remains unchanged. Only a limited amount of business is passing, and orders generally are for small lots. Ruling quotations on other metals are:—Antimony, 8¾c to 9c lb.; zinc, 5½c to 6c lb.; ingot brass, red, 13c to 15c lb.; ingot brass, yellow, 12c to 14c lb.; half-and-half solder, 24c to 26c lb.; pattern aluminum, 22c to 24c lb.; ingot aluminum, 18½ to 19½c lb.; acme solder, 19½c lb.; easy wiping solder, 20½c lb.; star extra, 21¾c lb.; wire solder, 27c; tinkers' bar solder, 28c lb.; lead wool, 8c lb.

Building Trades.

The greatest activity naturally centres in the building lines, which appear to be doing a very good business. The good weather of late has proved encouraging, as indicating a favorable condition in crop sections.

Nails.

Prices are unchanged from the late raise to $2.25 base, but are still the subject of much speculation. The producers of the articles in question maintain that that price and that of other steel products are much too low. The condition, irrespective of the truth of their argument, is a result of the depression in the States, which causes manufacturers there to offer their goods to the Canadian retailer at the same price that is asked of the American jobber. The consequence is that the

Canadian price is simply the American one, plus the duty.

Rope, Twine, etc.

Cordage lines continue in fair demand, and with no changes except in the case of oakum and packing, for which the demand is unusually strong. There has been a ¼c raise in these two items as per the current quotations.

Iron Pipe.

Pipe remains the same and in good demand with other lines of plumbers' supplies. The building that is being done as a result of the summer season has had a favorable effect on this line.

Cement and Firebrick.

There are no changes in these lines, but the manufacturers claim an extremely good demand, particularly in cement. In some cases the mills are behind on orders.

Stoves, etc.

Stoves, particularly those of the oil and gas variety, are still selling briskly. Gas appliances are also in the same class as best sellers. All hot weather goods, such as freezers, refrigerators, etc., are selling well; others fair.

Bar Iron.

Bar iron remains the same as last week. Toronto jobbers are quoting bar iron at $2 base, f.o.b. Toronto, and $1.95 base, f.o.b. factory point.

LONDON.

LONDON, Ont., June 4.—The past week has been a very lively one for the hardwaremen of this city. All summer goods are in big demand. Screen doors, screen windows, refrigerators, lawn mowers, and lawn hose have been the leading lines. Trade from the country is also very good.

Butts Declined.

Steel butts have been reduced in price, and the following quotations are now in effect:—

Narrow riveted .....70, 5 per cent.
Narrow loose pin .....70, 5 per cent.
Reversible loose pin ..70, 10, 5 per cent.
Light tee & strap hinges.60, 15 per cent.
Hinge hasps .....60, 5 per cent.

Plated butts in antique copper, plain bronze and dull brass, are quoted as follows:—

2½ in. x 2½ in.....12c pair.
3 in. x 3 in. .....13c „
3½ in. x 3½ in. .....14c „
4 in. x 4 in. .....18c „
4½ in. x 4½ in. .....32c „
5 in. x 5 in. .....40c „

Nails, Screws, etc.

Wire nails are in fair demand at $2.25 base; cut nails are quoted $2.70 base, f.o.b. London.

Wood screws are being quoted at the following prices:—

Flat head, bright...85, 10, 7½, 10, 10%
Round head, bright.80, 10, 7½, 10, 10%
Flat head, brass.....75, 10, 7½, 10%
Round head, brass.....70, 10, 7½, 10%

Paints, etc.

There is a scarcity of turpentine in London at the present time. Pure turpentine is quoted at 67c per Imperial gallon in one-barrel lots and 66c per Imperial gallon in two to four-barrel lots. Less than barrels at 74c per gallon.

Linseed oil quotations are as follows:

	Raw. Gal.	Boiled. Gal.
1 to 2 barrels.....	63c	66c
3 to 5 „	62c	65c
6 to 9 „	61c	64c
Less than bbl.	70c	73c

Standard putty in 100-lb. drums is quoted at $2.60 per 100 lbs.; pure at $3.35 per 100 lbs. in drums.

Summer Goods.

The recent fine weather has created a good demand for all lines of summer goods, including hose, screen doors and windows, refrigerators, scythes, snaths, etc.

WINNIPEG.

WINNIPEG, June 3.—The hardware business in the West varies in direct ratio with crop indications. Where crop indications are poor, travelers report bad business. Everything seems to be hanging on this issue. If the crop is bad, no one can begin to imagine what conditions will be like. If there is a good crop—and conditions at the present moment indicate one—using the words of a traveler for a large Winnipeg wholesale house, "Jobbers will not be able to fill the orders that will pour in next Fall."

There is another issue which is beginning to worry wholesalers here, and it concerns the oil boom in Calgary. While its ill effects have not yet been felt, it is known that a number of hardwaremen in the West are investing what little spare cash they have in oil stocks, not only in Calgary, but in other parts of Alberta and Saskatchewan. Collections are reported to be bad enough as it is, and jobbers have no wish for them to be worse. One firm said they were "scared stiff" about the money being put into oil.

Crop Indications.

There are one or two districts in the West which travelers report as having ufavorable crop indications. Particular mention is made of a district between Tabor and Medicine Hat, which is in need of rain. Most districts have received the much-looked-for showers, and prospects are the very best.

Sales during the past week have been on the lines of this reported last week—barbed wire and fence wire being in big demand. Screen doors, which were moving freely a week ago, have quieted down, retailers being pretty well stocked by this time. The stove business is in rather poor shape. A few orders are being received for late delivery, but most of the retailers are waiting for the crop before they order many stoves. Only a few heaters are selling, many retailers having stocks which were held over last year.

Price Changes.

A correspondent in the West made inquiries regarding the price of hinges. The price has not changed recently. Those quoted by Winnipeg jobbers for corrugated strap hinges in bulk are 80c, $1.08, $1.40, $2.25, $3.40 and $5.20 for the following sizes:—4, 5, 6, 8, 10 and 12. A change is reported in lead pipe. It is now $7 for coil, and $7.50 for less than coil.

The volume in business shows slight increases in sheets, steel bars, wire nails and plain wire. The price on nails is firmer, and with the duty on rods coming into Canada improves the situation from the standpoint of the manufacturer. Canadian mills have a surplus of nails, and there is not likely to be any change in the price. The price of tin plate may advance a little. Tin plate is not likely to go any lower in price, but no one knows when it is going to rise. It has got to a basis now where it does not pay the manufacturers, and many Western jobbers are seeing the advisability of booking orders now for as far ahead as October at the present low prices. While stocks are not moving out as fast as they did last year, they are going out very steadily.

Sheet Metal Situation.

W. T. Cox, Winnipeg manager for A. C. Leslie & Co., Ltd., who has just returned from a five weeks' visit between here and the Coast, says he finds a marked inclination to buy better grades of tin plate and sheet metal. He says there was a time in the West when the hardwareman and the tinsmith took anything that was supplied him by the jobber. In cases where this has been installed in furnaces before the house was completed, it has become rusted, and the dealer, not wishing to be condemned for his work, has demanded a better quality.

Mr. Cox reports business poor between Winnipeg and the Rockies and in Vancouver, but he found things excellent in Victoria, where considerable Government work is in progress. The only town holding up to anything like what business was a year ago, is Edmonton, owing to development work in the Peace River district.

Despite the hard times of the past eighteen months, the sporting goods business is reported to be exceptionally good, being up to that of last year, and indications are that this season will be equally good. Jobbers here fully expected a flop, which did not materialize. There is a heavy demand for boats, fishing tackle, tennis and baseball goods, and for golf supplies. Prices are all firm. Good guns are moving slowly, but the trap shooting gun is going better than it has ever done before. Black shells are getting popular in the West, and there should be a big demand. Tennis rackets are selling very well.

Paints, etc.

Paint business is reported by one firm to have exceeded all expectations. It is still moving well, especially in Winnipeg. Barn paint and shingle stain are big sellers just now, as attention is being paid more now to exteriors, such as porches, fences, sheds and roofs. Collections in this line are reported as only fair, but dealers are paying part of their accounts, and the majority are not getting backward.

Putty is selling very well, and is something that sells nearly all the time. Casks are being quoted at $2.50 gross weight. Turpentine is quoted at 80 cents barrel lots, 5c extra in less quantities. There is only a moderate demand. Linseed oil is not selling well. The season should open some time this month.

There is no great demand for glass, and the market has been firm for some time. The glass business does not get brisk until fall. Plate glass is quoted at 50 per cent. off. Decorators' pure white lead brings $9 per 100 lbs.

The following pirces are being quoted for colors and varnishes:—Yellow ochre, less than bbls., 4½c; Venetian red, bbls., $2; American vermilion, 12c; gold size, Japan, $2.25; pure white shellac varnish, $2.20, and pure orange, $1.90.

Stoves.

W. L. Helliwell, local manager of the Gurney North-West Foundry, Ltd., has just returned from a visit to Brandon, Regina, Moose Jaw and Saskatoon, and says he never saw the country look better. Business is quiet, but everybody is optimistic that business will soon return to normal. Merchants, he says, are more careful in buying and with their credits, which mean that things will be in better shape later on.

It is stated on good authority that at least two large Eastern stove concerns are working on a new electric stove, which should shortly make an appearance on the market. In Western cities, where current is cheap, there should be a big demand for electric stoves, as there is for other electrical lines already on the market. In Winnpeg, electric stoves are having a very gratifying sale, the price of current in this city being very reasonable.

TAKING THE PUBLIC INTO ONE'S BUSINESS CONFIDENCE.

Old-fashioned business prudence was of the closed-mouth variety and the gum-shoe order. Men who expected to succeed in business kept mum every minute and rarely took the public into their confidence. Nowadays this is rapidly changing, and some of the most progressive business men have come to the conclusion that harnessing up the public's interest and co-operation is best served by the utmost frankness and taking the public into one's confidence.

A striking illustration of the wide-open door policy is furnished by a large retail store in the South, which has an idea that the public respects a merchant who insists on a fair profit. Here is a card which the firm is circularizing to its customers and prospective customers, which is worth reading:

1. This store will get a reasonable profit over the cost of doing business on everything it sells or it will stop selling it.

2. This store realizes that its profits are paid by its customers for the service it renders them, Therefore, we will give the best possible service, so that in time we may have the largest possible profits.

3. As our customers will rely largely upon our advice in the matter of purchases, we will handle the goods we honestly believe to be best for them, even though we could make a little more money on a similar article.

4. We will not handle any line of merchandise that clashes with this policy. We are starting with the highest grade goods this community will now consume, and it will be our policy to lead them upward, step by step, to realize the higher economy of the highest grade products.

5. When we need help we will get the best to be had. When we need a clerk we will get the best salesman, regardless of whether he is an uncle or a brother or a cousin. We will pay them what they are worth when we find them.

6. We will not guess about our profits. We will make it our business to know on the first of each month whether we have made or lost money during the previous month.

7. We will set aside a certain percentage on our sales for advertising. We will apply our best thought to the expenditure of that money. We will use it to tell the public interesting things about our business and things interesting to them.

8. We will handle an advertised line when we conscientiously believe that it offers the best service and use to our customers and not before.

NEW GOODS.

(Continued from page 57.)

cents worth of current in 8 hours' run. Only one belt is used on the machine, and that is not crossed. There is a direct straight drive from the motor to the machine. The hone is driven by a new double friction drive and is claimed to hone the blades correctly—on a stone hone against the edge, or the opposite way in which they are stropped. The sharpening wheels (on left side of machine) are of leather filled with Hill honing preparation. The finishing wheels are of the finest grade of horsehide, broken in on special machinery. The head of the machine is nickel plated, the metal table is all metal with legs of tapered steel tubing, the top cast iron and the whole table finished in black enamel. Each bearing is oiled with a special grease cup. The table top measures 13 in. x 24 in.

CHATHAM PAINT-UP CAMPAIGN.

Chatham, Ont.—The Paint Up and Clean Up Campaign is meeting with good success in Chatham. The various hardware stores started things moving early in the season with some good pulling paint displays, varying to garden tools and later swinging back to paint again. In addition, with the co-operation of the manufacturers, a good many paint prospects are being circularized.

The result has been a very preceptible stimulus to paint sales, and to interest in painting generally. The campaign has been helped to some extent by the persistent work of the civic scenic committee in the last few years, as a result of which a number of eyesores are being cleaned up. Systematic work is now being undertaken by the city with a view to improving and beautifying the public parks and the streets. The civic movement toward a city beautiful and the campaign by the local paint dealers are proving mutually helpful.

All things considered, building this year gives signs of promising activity, the increased population necessitating considerable residential building, while a great deal of renovation is being done to existing residential properties.

There are no accidents in life. Every occurrence has a cause and like acts produce like results.

"CHALCO"

A PAINT AND VARNISH REMOVER
THAT'S 20% MORE EFFICIENT THAN OTHERS
YET COSTS NO MORE

To Retailers, Jobbers and Manufacturers:

We are now able to offer in "Chalco" a Paint and Varnish Remover of unusual merit.

It's 20% more efficient than others.

TRADE CHALCO MARK

The Paint and Varnish Remover

"We pay no royalties to put on your bill."

Write for Proposition

"Chalco" is positively different and positively superior—it leaves the surface better for refinishing than any other product we've tested.

It does not injure the hands.

WALKERVILLE, ONTARIO

Weekly Market Report---Paints

MONTREAL.

MONTREAL, June 4.—A good volume of trade is reported by jobbers and retailers in practically all lines, but there seems little of special interest just now. Orders are fair and collections show a slight improvement.

Ready-Mixed Paints.

There has been a good general demand and this branch of the business holds its position very well. Considerable business was done this spring in varnishes and floor finishes, as well as paints for interior and exterior work.

Linseed Oil.

Sales have been about the average and prices have not been changed since last report. The market appears none too strong at the present quotations, which are:—

Raw Linseed—
1 to 4 barrels.....60c per gal.
5 to 9 barrels .....59c per gal.
Boiled Linseed—
1 to 4 barrels.....63c per gal.
5 to 9 barrels.....62c per gal.

Turpentine.

The market continues firm but there has been no change as yet in the quotations, which have been in force for several weeks. There is a fair stock in the hands of the jobbers here. Though no immediate change in price is looked for, it is difficult to forecast what the future may bring about. Quotations now are as follows:—

1 barrel .....64c per gal.
5 barrels .....63c per gal.

Five-gallon packages, 5 cents advance; packages extra; terms net.

Gasoline and Benzine.

The demand for gasoline is still keeping the shippers busy filling orders. There has been no change in prices since last week and the following quotations are in effect:—

Barrels, in wood .....21½c gal.
In steel and drums .....18½c gal.
Tank wagon, (100 gals.) .....18c gal.

Benzine is quoted at 20½ cents per gallon, in single barrels.

White Lead.

There has been a reduction of 15 cents per hundred in pig lead, but the quotations for white lead have not been affected and are still quoted at $8.05 per hundred for ton lots, and $8.25 per hundred for less than ton lots.

Glass and Putty.

Sales of glass have been only fair, and the same applies to putty, which follows closely the glass market. Prices are maintained at the figures previously quoted, which are as follows: Star, $3.40 base, net, for country, and $3.65 base, less 5 per cent, city; double diamond, $5 base, net, for country, and $5.40 base, less 5 per cent. for city dealers. Plate glass is subject to a discount of 40 and 5 per cent. off list for country, and 50 and 5 per cent. off list for city dealers.

Quotations on putty will be found in current market quotation list.

TORONTO.

TORONTO, June 4.—The only changes in the local market, during the past week, occurred in gasoline and benzine. Other lines remain unchanged. Turpentine and oil, however, are holding the centre of the stage. The continued good weather and further resumption of building have materially assisted sales of all paint materials. In fact, hardware dealers report more favorably of paint lines than of almost any other.

Turpentine.

Turpentine is firm after the recent raise, with no change from last week. Production has fallen off in answer to the recent lessened demand. Receipts at Jacksonville were eleven thousand barrels less for the first five months of the year as compared with the corresponding period of 1913. Prices remain as they were and are as follows:—

Single barrels .....67c per Imp. gal.
2 to 4 barrels .....66c per Imp. gal.
5 gal. lots .....74c per Imp. gal.

Linseed Oil.

Oil is still rather an uncertain quantity, but the general feeling is less one of suspicion that it has been recently. The prices are unchanged and are as follows:—

Raw Linseed Oil—
Single barrels .....63c gallon
3 to 5 barrels .....62c gallon.
6 to 9 barrels .....61c gallon
Boiled Linseed Oil—
Single barrels .....66c gallon.
3 to 5 barrels .....65c gallon.
6 to 9 barrels .....64c gallon.

Oil in less than barrel lots, 7 cents per gallon. Cans are charged at: 5-gallon cans, 50 cents each; 10-gallon, 75c each.

Gasoline and Benzine.

Gasoline has dropped half cent per gallon and benzine is one cent off, making them 20½ and 19½ respectively. For three-barrel lots the rate on both is as usual, one-half cent less.

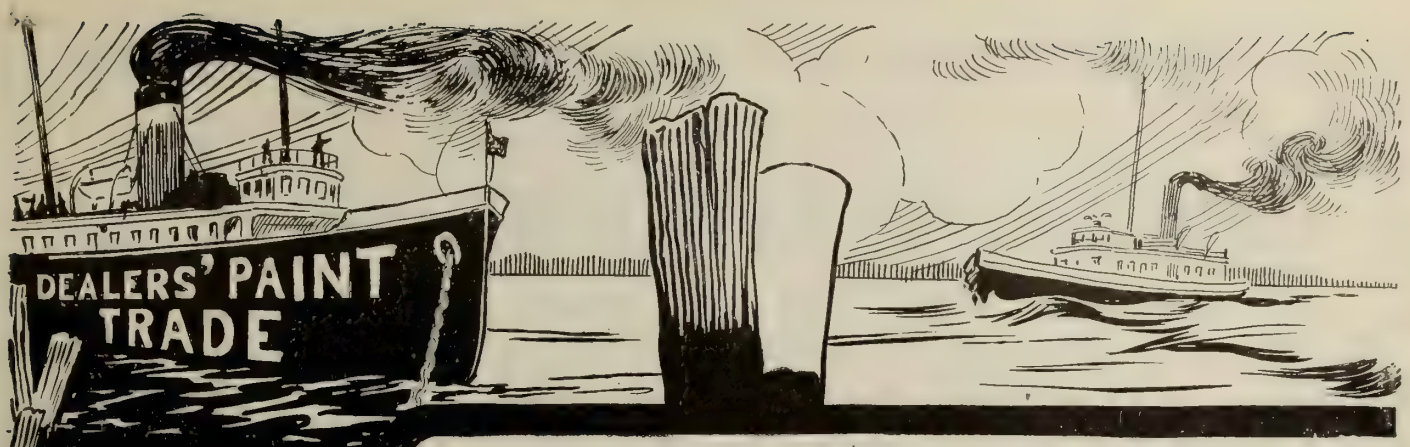
Glass, Putty, Etc.

Glaziers' materials remain the same with an increase in sales following the increasing building operations of summer.

White Lead.

Nothing further has occurred in white lead, nor is there likely to be any change until the end of July. Prices are still $8.40 per cwt. for less than ton lots, and $8.20 in ton lots.

HELPING THE SMALL TOWN.



The question of how to help the small Western town has been discussed considerably of late, but H. M. Hall, LeRoss, Sask., has done much in the direction of answering this question. LeRoss is 332 miles from Winnipeg, on the C. T. P. line. He visited the city last week, but before doing so he made arrangements with about 145 farmers [illegible] district to handle their cream [illegible] in Winnipeg. This mea[illegible] for their produce, and [illegible] Ross. Incidentally Mr. [illegible]e of selling cream separate[illegible] farmers, and [illegible] getting a good [illegible] heir trade in sup[illegible]

Thus [illegible] something practical to help [illegible]. Hitherto cream for Win[illegible]en coming from the United State[illegible]ipally from St. Paul a[illegible]Wisconsin. The Crescent Creamery, w[illegible]ranged to take cream from [illegible] have been spending as [illegible]0 for cream coming [illegible]tes, not being able [illegible] Any town nearer to [illegible] good railway service [illegible]ting business of this sort, a[illegible] considerable foresight on the [illegible]r. Hall that he had been able [illegible]y this deal through successfully.

THE EMPRESS OF IRELAND DISASTER.

(Continued from page 55.)

been calling on the Canadian trade in the interests of his firm, and booked passage on the Empress to return home. It was stated in the earlier reports that he was among the lost, but Hardware and Metal learns that a telegram was received from him on Wednesday morning stating that he is in the Jeffrey Hale Hospital, in Quebec. His arm is broken and it will be some little time before he will be able to get around again.

IT HOLDS YOUR CUSTOMERS FOR YOU

It is easier to lose customers than to get them; they should therefore be held to you by the solid rock of reliable goods. In short, **it pays** to handle exclusively

ANCHOR SHINGLE STAIN

It is primarily a quality product, combining beauty and utility to an unusual degree.

It effectively protects shingles against decay; and

The beauty and richness of its colors commend it to the lover of artistic effects in house decoration.

These two elements are what all users of shingle stains desire, and by selling ANCHOR, you can give them precisely what they want and should have—a shingle stain made from coal tar creosote oil and permanent colors, combined with our Special China-Linseed Binding Oil to hold both colors and preservative firmly to the wood.

One satisfied customer leads to another, and the best way for you to enlarge the procession is by selling exclusively goods that satisfy—ANCHOR SHINGLE STAINS.

Your selling efforts on B-H products are backed up by our advertising and selling helps. Let us send convincing details. The B-H agency is worth having.

Current Hardware and Metal Quotations

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figure being for large quantities and prompt pay. Large buyers can frequently make purchases at better prices. The editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate. Retailers desiring to get in touch with firms selling any articles on which quotations are made can do so by writing the editor.

MURESCO

is the big noise in the Spring house-cleaning. It is a profit-producer for the hardware man, for it's a wonder for keeping customers and increasing sales. It's a wall covering without an equal. It's easy to apply, and it has no faults at all in the matter of service. You had better read up on Muresco; it is described in full in our booklet. Or better still, let us quote you on a trial order.

Benjamin Moore & Company, Limited
6 Lloyd Street, West Toronto

Do you sell it?

Are you in line for big paint profits in 1914? Have you made sure of a prosperous paint year by stocking

"SILKSTONE"

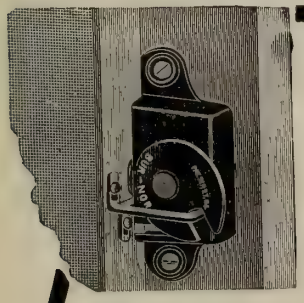
The STERLING

"How to Keep Mail Orders at Home"



We have just printed a booklet which tells you how to put the "kibosh" on mail order sales in your community. It's the livest, most helpful piece of printed matter ever issued for dealers in farm implements. Ask us for a copy and we will rush one to you. We will also prove to you that the grindstones to keep mail orders at home are

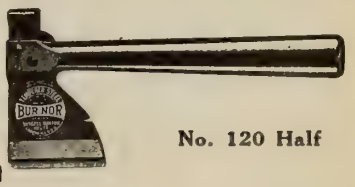
CLEVELAND GRINDSTONES

Sold only to Hardware and Implement Dealers

The **only genuine** Berea grindstones. The standard. No soft spots or flint spots. Specially selected stones for farmers' use. Every one guaranteed to you and to your customer.

THE CLEVELAND STONE CO., Leader-News Bldg., CLEVELAND, OHIO

No. 2-A Closed



Why Use Screen Doors, If They Don't Shut Tight?

Bur-Nor Catches will hold the doors shut, prevent warping and sagging. Also strengthens weak hinges. Made in two styles, Plain and with positive locking attachment. Put them on your show-case, they sell themselves.

Our Hatchet proposition will also interest you. Bur-Nor Hatchets are 50% stronger than other styles.

May we send you catalogue and prices of both?

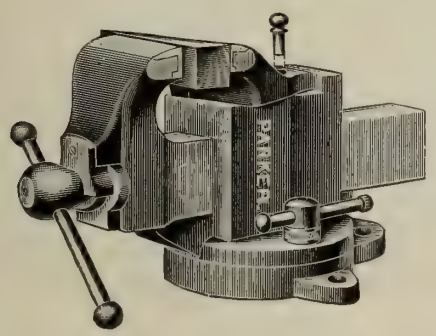
Brooms and Whisks



You want a first-class line of Brooms for **Spring Trade** and the **Keystone Brand** is what you should have to give your stock the proper tone. You will find it difficult to secure three lines which will measure up to the "Jubilee," "Klondike" and "Nugget."

We specialize in whisks, and with over sixty lines to choose from we should be able to satisfy the most fastidious tastes.

THE CHARLES PARKER CO.
Factories—Meriden, Conn., U.S.A.

The carpenter is now looking for the name "Simonds" and the Simonds trade-mark on the Hand Saw he buys. He is willing to pay $2.50 or $3.00 for a Simonds Hand Saw in preference to paying half that amount for a saw not only cheap in price but cheap in quality. Hardware Dealers throughout Canada can buy these saws either direct or through jobbers. It is essential for the best grade of stores to carry high-grade saws. You make no mistake when you stock the Simonds Saw. Send for catalog and best Dealers' discounts.

What Can You Offer Your Customers Who Want a General Purpose Varnish?

These are the people you make most varnish profits from. You should cater to their trade with a varnish you know will give the results your customers desire, and yet sell at a price that the average property owner can afford to pay.

Here are two varnishes representing the biggest varnish values on the market. Test them out so you can see yourself how easyworking, tough, elastic, bright and durable they are.

CP SUN VARNISH

This is an ideal varnish for a paint dealer to feature and push. It is a bright, hard Kopal Varnish that can be used for inside and outside work. It gives splendid satisfaction on wagons, carriages, store fronts, doors, boats, and all exposed surfaces. For inside use it gives a splendid finish for all woodwork, and is particularly good for bathrooms, kitchens, and parts of the house exposed to severe conditions. Put up in half pint, pint, quart, half gallon and gallon tins, Imperial Measure.

CP SUN WATER-PROOF FLOOR FINISH

This varnish is made especially for floors with the idea of standing severe conditions which they are subjected to. It dries extremely hard overnight and does not scratch or mar easily. Water does not affect or turn it white. It gives good results on hardwood, hard pine or any stained or varnished floors. Put up in half pint, pint, quart, half gallon and gallon tins, Imperial Measure.

The gathering of the clans

"On to Toronto!"

YOU have doubtless noted with gratification the great movement for honesty and square dealing which is revolutionizing American and Canadian business methods. Our goods, our salesmanship and our advertising are being cleansed and vitalized by the spirit of truth and sincerity.

As a result, we see a growing public confidence in manufactured products and their advertising — a confidence which, if preserved and fostered, will decrease our costs, increase our profits, and become a business asset of incalculable value.

Foremost in the fight which has brought about this revolution stand the Associated Advertising Clubs of America, whose emblem is shown above. If you are a business man, interested in the manufacture, distribution, or selling of commodities of any nature, you should attend the Tenth Annual Convention of the A. A. C. of A. at

TORONTO

June 21-25, 1914

At this Convention you will hear the inspiring story of the manner in which these tremendous reforms are being effected. More than this, you will hear the problems of distribution, merchandising, salesmanship and advertising discussed by able and successful business men, in a series of open meetings.

These meetings will cover the questions of chief interest to the 10,000 business men comprising the 140 clubs of the A. A. C. of A. —*your own* problems included.

EDWARD MOTT WOOLLEY, the famous writer on business topics, has written a booklet entitled "*The Story of Toronto.*" This booklet describes in a forceful, intensely interesting manner, the wonderful work the A. A. C. of A. are doing for clean advertising and square business methods, and the significance and importance of the Toronto Convention. This booklet will be sent free to all business men asking for it on their business stationery—together with detailed facts as to the convention programme and rates for accommodations.

Waterproofing is the vital part of roofing

It is the quality that determines whether or not your customer will be permanently satisfied with the roofing you sell him.

That is one reason you should sell

Genasco

THE TRINIDAD-LAKE-ASPHALT

Ready Roofing

Genasco is made of genuine **natural** asphalt.

The oils put in it by Nature stay in to give life and resisting power to Genasco.

Trinidad Lake asphalt—the everlasting waterproofer—is the back-bone of Genasco, which makes it stand up against weather and hold out against time.

The KANT-LEAK KLEET makes seams as watertight as the roofing itself.

Sell Genasco—for satisfied customers and bigger profits.

Order Genasco from your jobber.

Write us for full information and samples.

Heller-Aller Force Pumps

"The very profitable and reliable kind"

Pump Cylinders are made of heavy brass tubing, which has a double advantage.

It ensures the very best wear and permits the use of very coarse thread on cylinder caps (eleven threads to the inch). This prevents the cap threads from wearing or rusting off and dropping into well.

Heller-Aller Force Pumps are equipped with the most efficient, tried and tested valves. They never fail in service.

Write for full information.

The Heller-Aller Co.

Dealers can make a big profit by handling this line. Ask for catalog.

BUCK BROTHERS
Millbury, Mass., U.S.A.

Are You One of the Capable Men of Your Locality?

Does your present income permit you to enjoy all the every-day luxuries, an occasional vacation trip, a new watch, bicycle, or possibly an extra fall suit?

We are anxious to appoint a capable man in your district to represent MacLean's and The Farmer's Magazine.

In all parts of the country hundreds of energetic men are representing our publications, supplementing limited home incomes, or, in other cases, making this work their only vocation. Some of them earn more than managers of leading concerns.

The work is enjoyable, keeping you out of doors and in touch with the activities of the community. You will not be a canvasser, for as a representative of MacLean's or Farmer's Magazine you will be received as one of the successful, capable men of the community. Consequently your success is assured from the very start.

On each order, new or renewal, you will receive a definite commission, so that your salary will be gauged entirely by your efforts. No previous business experience is necessary. We coach you and co-operate with you at all times. If you will write us to-day, we will gladly tell you further about the work.

Do not delay Writing

The MacLean Publishing Company, Limited
143-149 UNIVERSITY AVE. **TORONTO, CANADA**

Taking Tea With a Duke

An invitation comes to an Ontario family to spend a week-end with the Duke of Connaught at Rideau Hall, Ottawa.

Now what would you do if you were honored with a similar invitation, and how would you expect to deport yourself?

It is natural curiosity that makes this article, by a Canadian writer, so interesting in the June MacLean's.

The week-end visits to the country homes of Old England are events of most charming hospitality. The complete hominess of the atmosphere is what endears such visits to all who have had the pleasure of enjoying them.

True hospitality and unconventional kindness radiate all round. The uncertainties of knowing how to act are forgotten. Read this interesting account.

Other features are unusually attractive and your library and office will be incomplete without a copy of Canada's leading magazine.

Its Canadian enterprise must appeal, by reason of its Canadian writers, its Canadian illustrators, and its unequalled Canadian cover artist's work—Mr. F. S. Coburn has won international glory. Seeing is subscribing.

Send us a postcard and have your name placed on our subscription list.

Subscription $2.00 a year. *Twenty cents a copy.*

Does Your Competitor

sell "Delta" files? If he does, you should also do so in order to get your share of the business; if he doesn't, you can control the most sales by selling them.

The man who uses many files is quick to realize the superiority of the "Delta."

This is the only line of files from 3 to 24 inches made absolutely of crucible steel; this accounts for the prolonged usefulness.

The "Delta" is a clean, smooth and rapid cutter.

Always look for this trade-mark on the tang. It safeguards the interests of dealers and users everywhere.

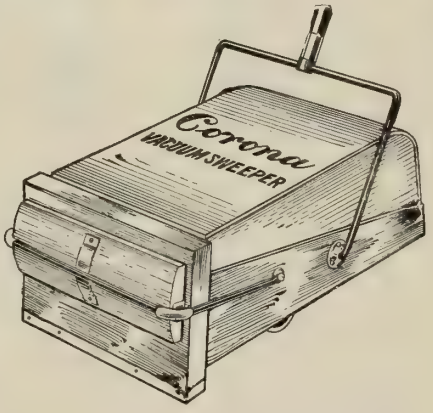
KENT, SON & CO.
261 King St. West
TORONTO



On account of its great efficiency and moderate price the

"CORONA" VACUUM SWEEPER

is one of the most popular machines of its type.

Three Bellows of improved design and construction produce a much stronger suction than is ordinarily found in machines of this type. This suction draws all dirt and dust into a bag while the sweeper is in motion in either direction and a revolving brush, which is driven by rubber-tired wheels, picks up threads and all surface matter. The dust bag is easily taken out without removing the nozzle of the sweeper, while the brush pans are released for emptying by a slight touch of a spring latch while the machine is on the floor.

Write for full information and price.

Thomas Birkett & Sons Co., Ltd., Ottawa, Ontario

DEALER

This Lock, Mr. Farmer, is the one used in our "Great West" Fencing

You might possibly get some cheaper fence than ours, but you will look in vain for any better.

Our Fences are made in the West, designed especially for the Western trade, and we guarantee every Rod as to strength and durability.

It is the "Standard Fence" of our "Great West."

Write for our illustrated catalogue and price list.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

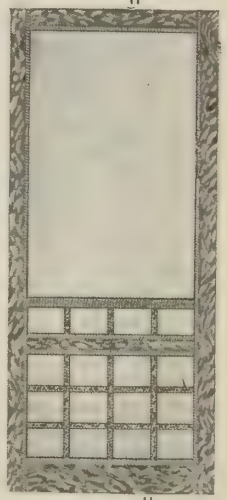
SCREEN DOORS

That are strong and well finished

We use only carefully - selected, well-seasoned, dry pine.

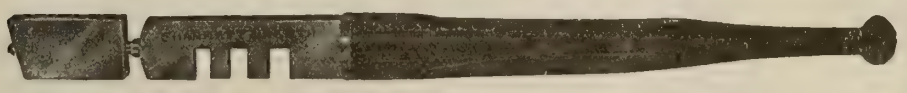


Frames are held rigid by well - glued dowels. Stiles and top rail from 4 in., and bottom rail from 6 in. stock, finished ⅞ in. thick. Only the best grade of black wire cloth is used.

All doors are turned out of the Woodworking Department by special up-to-date machines, resulting in a fine, smooth surface, ready for our weather exposure fillers and varnishes.

Inspection and packing are given the careful attention required.

We can ship immediately from stock.



Write us for booklet showing complete line.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

a thought for manufacturers and jobbers of hardware

If nine-tenths of the hardwaremen in Canada were assembled in Massey Hall, what would you give for the privilege of standing on the platform and telling them about the merits of your proposition?

here is our offer to you:

We offer you practically this same privilege in the advertising pages of Hardware and Metal. For nine-tenths of the retail hardware dealers in all the Provinces of the Dominion are paid subscribers to Hardware and Metal. And they read it every week, because it helps them to make more money.

Establish a Profitable Ornamental Fence Department

Handle a line of fencing that is bound to give long continued satisfaction—fencing that not only protects but beautifies property, as well—fencing that can't help bringing more trade to your store. Such is

Peerless Ornamental Fencing

Every stay is made of strong, stiff wire that will not sag. This fencing is made from galvanized wire and in addition, is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless fence is easy to erect and will hold its shape for years to come. We also build a full line of ornamental gates.

Send for Dealers' Proposition

Get our literature showing many beautiful designs for lawns, parks, cemeteries, etc. Also ask about our farm fencing and gates.

SELL HIM DUPONT POWDER

When He Asks for "Shells for Field or Trapshooting"

THEN you sell him a powder load which always "makes good."

DUPONT POWDER, either "bulk" or "dense," is loaded by standard loading companies. The powder is known everywhere. Its reliability and uniform shooting properties are demonstrated at the traps, in the woods, or in the blinds.

SIMPLIFY YOUR STOCK

By selling DUPONT LOADS only. Concentrate on DUPONT POWDER—the "old reliable," guaranteed kind. Shooters are "fussy" about their powder loads. Why invite dissatisfaction by selling powders of little known or inferior quality?

Sell him DUPONT—he is sure to find it always satisfactory. Build your sporting powder business on goods of known merit. Stock DUPONT—the asked-for, quick-selling, satisfaction-giving Smokeless Powder for shotguns.

For booklets about Sporting Powders for all types of firearms or trapshooting booklets, or club organization aids, write to Sporting Powder Division.

Catalogues, etc., sent on application

CHICAGO STEEL BENDING BRAKES

(Made in all sizes)

Regarding the Steel Bending Brake we purchased last spring, are pleased to report that we are more than delighted with this machine, not only with the way it is constructed, but with the work it turns out. We formerly used a —— brake, but are very glad indeed now that we have made the change. We get more speed and better results.

Yours truly,

THE McCLARY MFG. CO., C. E. Main, Lanager

The Steel Bending Brake Works Ltd., Chatham, Ont.

BOOKS FOR HARDWAREMEN

Every hardwareman can get valuable pointers and make his business a more profitable proposition if he will study the experiences of experts who have 'made good.' Our Technical Books for hardwaremen cover a wide range of subjects, among which may be mentioned Metal Working Books, Hardware Window Dressing, Store Business Methods, Paints and Painting, Salesmanship and Sales Plans and Advertising. We have also the very latest books on the plumbing and heating problems.

Technical Books, 143-149 University Ave., TORONTO

Cut of **No. 1751** Half Size.

Cut of **No. 1753** Half Size.

STANLEY

TRADE S.W. MARK

Wrought Steel

Screen Door Butts

These butts are of the same good quality that is consistent with all other "Stanley" goods.

They are supplied to the surface of the doors. By simply slipping out the pins the door is easily taken off and can be as readily rehung when necessary.

They add greatly to the appearance of any entrance, being splendidly finished in Japan, Antique Copper, Dull Brass or the anti-rust "Stanley" Sherardized; the latter finish is recommended for outdoor work or damp climates as it prevents rust.

Packed one-half dozen pairs in a box with screws. Weight per dozen with screws, No. 1751, seven pounds. No. 1753, five and one-quarter pounds.

If your jobber cannot supply you write.

See our quarter-page advertisement on page one

BIG Ben is the biggest thing to-day in the American alarm clock industry. He has everything in his favor—quality, looks, and style. He runs on time, he rings on time, he stays on time.

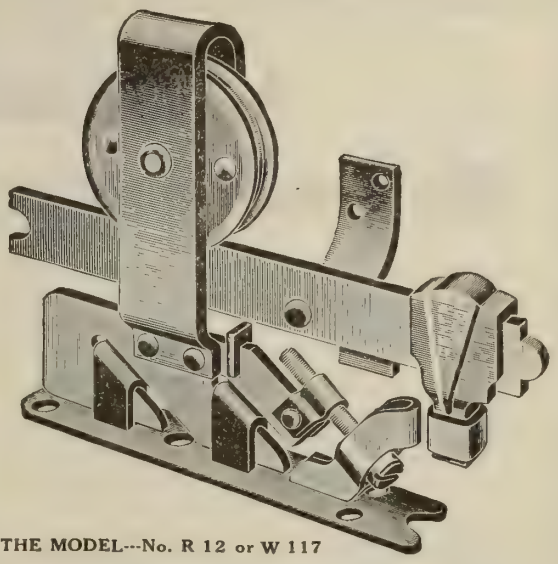
Slender, massive, richly plated, he stands seven inches tall, with well-shaped distinct hands and a big broad dial easily visible in the dim morning light.

He rings just when you want and either way you want—*five straight minutes* or every other half minute *during ten minutes* unless you shut him off.

His keys are large, strong, easy to wind; his voice deep, jolly, pleasing to hear. The movement plates are bridged like on a Waltham watch— you can change both mainsprings *without taking the movement apart.* The pivots are of hard steel piano wire $\frac{22}{1000}$ of an inch thin. The escapement is a hardened steel pallet escapement—not a pin escapement like that of other alarm clocks.

We are carrying on hand a stock of Big Ben specially put up for *Canadian* trade, 6 in a carton together with a full set of Store Selling Helps, (posters and show cards.) On an order for 12 we give a solid mahogany display stand. On an order for 24 we print your name free on dials and with an order for 48 we send a striking, electric flashing sign, just the thing for your window or counter.

The minimum retail Canadian price is $3.00, and there's a $3.00 resale tag on everyone you buy.



Sectional Cylinder Set

Cast Brass and Bronze

has caused an unusual and insistent demand by Dealers, Roofers and Owners for the

SIMPLEX

Large Head **One-Piece**

Roofing Nail

Stop to think—here is a nail with a head **four times as large** as the ordinary roofing nail—and that isn't all—it's **made in one piece,** has **thick** rust-resisting head and a small barbed stem.

The Head Area

gives a large bearing surface on the roof and prevents roofing tearing out under wind strain.

The One-Piece Head and Stem

prevent leaking and rusting where nail goes through the cap—**the nail and cap are welded into one piece.** No time lost—to say nothing of the inconvenience—in handling separate nails and caps.

The Cupped Shaped Head

gives a head bearing equal to its full diameter.

The Small Barbed Stem

insures greatest holding power and doesn't split the roof boards.

Head 1 inch diameter, 21 gauge thick; Stem 1 inch long, 15 gauge diameter.

9 RUNAWAY BARGES SEND 156 CRAFT ADRIFT AND SINK 7

Boats Break Loose from Tow and Sweep Yacht Anchorages.

HAVOC ALONG SHORE OF THE HUDSON RIVER

Three Houseboats, with Families on Board, Among Those Struck and Damaged.

Nine runaway barges, laden with sand, gravel and other building material, swept through the numerous fleet of yachts, motor boats, launches and other small craft moored in the Hudson River between 137th and 170th streets yesterday morning, sinking at least seven of them and sending 156 adrift, many of them damaged.

All day the owners of the craft and the harbor police were busy searching for the drifting vessels, many of them being found as far south as 100th street.

A sudden squall out of the northwest at two o'clock yesterday morning parted the hawsers by which two tugs of the Cornell Towing Company were towing nine laden barges down the river against a rising tide. The nine barges, which had been lashed together, parted, two of them being blown inshore at 138th street, while the tugs caught the other seven, towed them inside of the cove at Fort Washington Point, opposite 176th street, and anchored them while they put out to stop the other two barges.

But these two barges were blown swiftly into the moorings of the Colonial Yacht Club, at 138th street, and with such force that three motor boats were sunk, forty more small craft were stripped from their moorings and the landing stage was smashed. The freed vessels started down stream. Their cabins had been crushed in by the barges, their sides scraped and their seams sprung in many instances.

The wrecking of the landing stage awa

The news story opposite goes to show how much damage may result from the parting of a rope. Viewed in this light, every poor or overstrained rope is a public menace.

A man's responsibility does not end with himself—it embraces everybody whom his dealings or actions may affect.

You, as a dealer, can do much to fulfill your responsibility by selling only Plymouth Rope, which is reliable, and by educating buyers to purchase new rope oftener.

Both these courses are also profitable—in money and good-will alike.

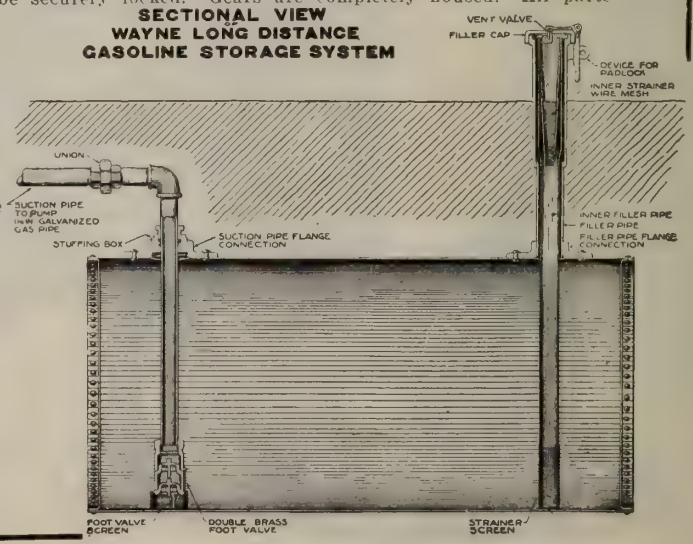
The Only Profitable Way of Handling Gasoline and Oils in the Retail Store

When gasoline and oils are handled with Wayne Storage outfits there is no waste due to evaporation, leakage and spilling. The waste does not seem to be very much at one given time, but in the yearly aggregate amounts to considerable.

This system also saves time and labor, as there is no constant filling and handling of measuring cups and the constant rolling in and out and tapping of barrels, and much space.

Does away with dirt and unpleasantness.



The **WAYNE PUMP** is constructed so as to throw a pint, quart, half-gallon or gallon, and measure **exactly.**

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts are accurately machined and thoroughly tested, and are interchangeable.

WAYNE UNDERGROUND TANKS are made of the best grade of steel, carefully soldered and riveted, and finished in rust-proof asphaltum paint to prevent any possibility of corrosion; you bury the tank, as shown in detailed drawing, having the fill pipe come to the top of the ground, where it is handy for filling.

If you're interested in a Clean, Safe, Money-Saving Way of Handling Oils, write for full particulars.

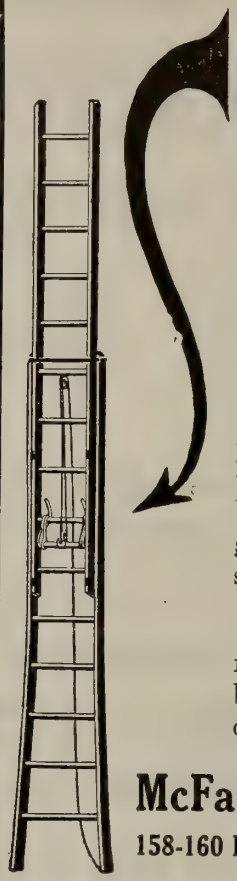
Saves Oil, Time and Labor

A trial always makes a steady user.

Easy Profit because Easily Sold

No matter in what position the can may be held, the oil is entirely controlled by the operator. Not a drop of oil need be wasted. Oil is forced out by simply pressing on the plunger. The flow of oil ceases the instant the pressure on the plunger stops.



Oiling can be done in one-half the time and with less effort.

The "Cannon" is giving satisfaction to thousands of users.

Drop a card for particulars.

BOSS

OVEN

GLASS DOOR

GUARANTEED

No. 750

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

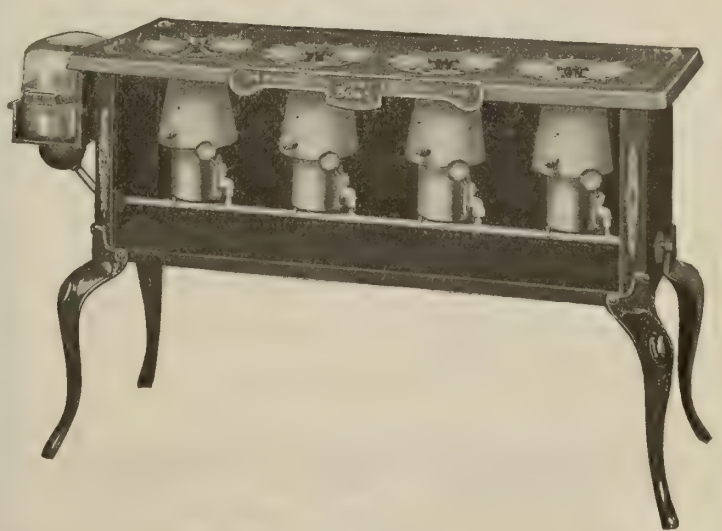
The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.



NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

My Friend's Auto

Next to having an auto of your own, it's best to have a friend who has one. I have one—a friend I mean. It's so new it hurts your eyes when the sun shines on it. This friend of mine gave me a lift up the avenue the other night. I noticed he changed all the gears with only one handle. The last auto I was in had about four, I think. I didn't say anything at the time, but I thought to myself "these auto makers have copied the ECONOMIZER—one handle to change all the gears —we have one handle to regulate all the drafts."

Thus does the world move towards SIMPLIFICATION.

Dealers—Handle this Fence

YOUR success in the sale of fencing does not depend so much on your sales ability as on the fencing you sell. It's fence service—not price—that brings you customers. Ours is a fence of service—a fence of repeat orders. We have letters from dealers all over the Dominion substantiating these statements.

Peerless Ornamental Fencing

not only protects, but beautifies property as well. Every stay is made of strong, stiff wire that will not sag. Our fencing is made from galvanized wire and in addition, is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless fence is easy to erect and will hold its shape for years to come. We also build a full line of ornamental gates.

Send for Dealers' Proposition

Let us tell you the reason,

that you should stock up with the Dana Peerless Freezer, right now.

The Peerless makes its greatest appeal in Summer. Although it's in demand all the year round—naturally, in the sultry months, the demand is greatest.

And the Peerless appeals irresistibly to those people — the Summer campers, the commuters who go to live, far from the stores, where good ice-cream is procurable.

If you have it in stock, good and early, you'll be able to show it to them before they go,—you'll have time to demonstrate it—to point out the tall, slender can—to show them how the dasher removes the cream from the sides as fast as it becomes solid. You will be able to let them crank it themselves, to let them discover that it is as easy to grind as a watch is to wind.

That's the reason you should stock the Dana Peerless **now.**

A mighty good reason, isn't it?

You'll think so, when we tell you about the profits.

So ask your wholesale hardware supply house about them now.

Manufactured and Sold in Canada by

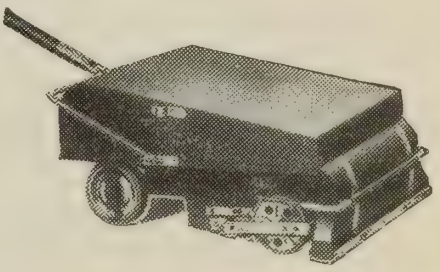
SOLE LICENSEES OF DANA MFG. CO., CINCINNATI

THE CAVALIER



1914 Model — Two Styles

Ball-Bearing Combination Vacuum Cleaner and Sweeper
Ball-Bearing Vacuum Cleaner without Brush Sweeper
(when ordering state which style is required)

Eats the Dirt

Swallows the Dust

Built of selected three-ply birch veneered wood throughout.

BELLOWS: Specially constructed to withstand the hardest use; displacing 40,000 cubic inches of air per minute.

NOZZLE: Overlapping twelve-inch suction nozzle, reaching into the corners and close to the wall.

VALVES: Arranged to give perfect action by means of high-tempered springs, tight fitting, and assuring no loss of suction.

DUST BOX: Flexible metal sides covered with canvas cloth; indestructible.

BALL BEARING: Special annular steel ball bearings, accounting for the ease of operation; never requires oiling. No wooden spool bearings to bind or break.

WHEELS: Made of cold pressed steel, extra heavy pure rubber tires.

BRUSH: Best Russian bristle, held in position by oil-tempered spring, self-adjustable to all naps of carpets, with double dust pans easy to clean.

TWO STEEL PINS: Insuring accurate adjustment of nozzle; exclusive feature.

STEEL SPRING CLAMPS: Holds the handle upright, so sweeper can be carried to any part of the house; a decided improvement over the old method.

FINISH: All wood parts beautifully finished in mahogany. Metal parts highly nickel plated.

INSPECTION: Every machine thoroughly inspected and tested before leaving the factory.

1. **Low cost,** within the reach of everybody.
2. **It takes the place of ordinary** carpet sweeper and broom. Will last a lifetime; no parts to get out of order. Picks up lint, hair, ravelings, pins, etc.
3. **Carpets and rugs wear longer.** Sweeping tears the nap; beating breaks the warp and takes the stiffness from the rugs.
4. **It keeps the dust and dirt** confined, thus preventing the unpleasant and unhealthful spreading of dust and germs.
5. **It can be used as a vacuum cleaner** without the roller brush by simply removing the brush, a new feature.
6. **It is built low** in order to be used under beds, couches and other furniture.
7. **It weighs eleven pounds,** so light a child can handle it; easiest-running combination machine built.
8. **Double steel cone annular ball bearing.** Has three bellows, assuring continuous suction, a distinct advantage over two-bellows type.
9. **Built by skilled mechanics.** It runs without noise or vibration.
10. We claim the **CAVALIER** Annular Ball-Bearing Combination Vacuum Sweeper the newest type machine that money can buy or build to-day. Superior to anything in use; a 1914 product of **quality** and **efficiency.**

Cavalier Vacuum Sweepers are covered by the "C. L. & Co. Guarantee" to do the work claimed for them and against any defect in Workmanship or Material.

LOW PRICE. **HIGH QUALITY.**

Caverhill, Learmont & Co.

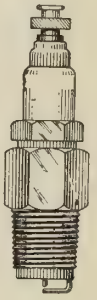
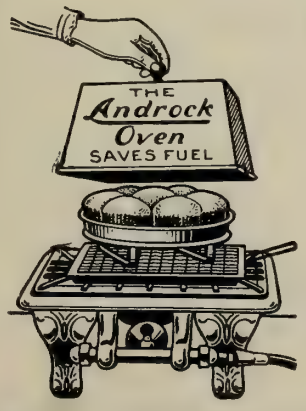
SPARK PLUGS that Canadian Dealers will find very profitable



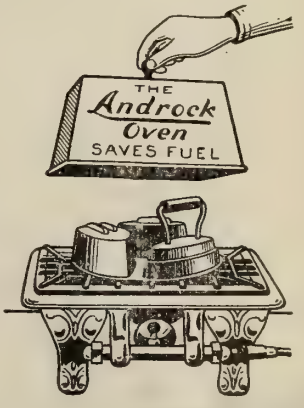
AJAX SPARK PLUGS



A standard form of Spark Plug construction, using conical type porcelains and best mica insulation. We have made the same goods in the same way for years, and have not found it necessary to change. The sparking points are non-corrosive, and will not disintegrate with heat.

SPECIAL LONG PLUGS
of most improved type

These styles should be carried by all dealers, as they satisfy an increasing demand for certain makes of engines. For Special ½-inch Plugs have an extra long body, admitting of ready wrench manipulation.
Just try these plugs. They'll speak so loudly for themselves that you'll order more.



STAR SPECIALTY MFG. CO., 227 West Erie Street, Chicago, U.S.A.

The "Androck" Oven

Fills a long-felt want. Saves gas and time.

It consists of four parts: The cover, or oven proper, made of aluminized steel; the **Stand**, asbestos lined; the **Heat Distributing Plate**, to be used underneath the stand or alone for heating flatirons, and the **Androck Bread Toaster**, the finest toaster made.
One burner is all that is required to do an ordinary baking, whereas a range requires 2 or 3, and produces no better results. This means a big saving of gas and a cooler kitchen. The oven works equally well on gasoline or coal-oil stove.
Get the Androck Oven now and boost it. Every sale leads to others.

Review of the Year by Manufacturers

Annual Convention of Canadian Manufacturers' Association Held at Montreal—President Gordon's Address—Business Depression Not Confined to Canada.

MONTREAL, June 12.— Several hundred delegates attended the annual convention of the Canadian Manufacturers' Association. During the three-day sojourn in the city the delegates enjoyed a trip in the harbor, attended several social functions, including the banquet on Thursday night. The convention opened on Tuesday with a large attendance. Beside the address of C. B. Gordon, of Montreal, there were reports as to the association's finances, membership, etc., and a report from the Insurance Committee.

Two thousand dollars was voted to the sufferers through the sinking of the Empress of Ireland.

The treasurer's report for the past nine months—owing to the fact that the meeting is being held in June instead of September — shows that the receipts amounted to $52,462, and there was a profit on the period of $6,111, the total balance of the association now being $43,180.

The general dullness of trade was indicated in the Membership Committee's report. The net increase for the year was only thirty-six, bringing the total membership up to 3,043. No less than forty-six of the resignations during the past year were due to liquidations or discontinuances of manufacturing operations.

President Gordon on the Business Situation.

The address of President Gordon was, in part, as follows:—

"All other problems have come and gone and have lost their significances compared with a problem that has been with us throughout the year and which threatens to keep us enveloped in its shadow for some months to come. The business depression is a trouble we cannot afford to make light of. Every day brings fresh reminders of its existence, reminders that lead us to speculate as to its causes, its probable duration and the extent to which our resources may be taxed in serving it. It should be quite possible for us to associate the depression with some of the events that have occasioned it, as well as with some of the conditions and tendencies by which it has been accompanied, and so turn an unfortunate situation to good account by acquiring a better understanding of our inherent weaknesses.

"An investigation of any widespread depression usually shows two sets of influences at work, one operating within the country, the other without. Canada's present trouble is no exception to the rule. Her domestic policy may be accountable for a great deal, but external affairs have played by no means an unimportant part. Dependent as we are upon foreign capital to finance our developments we have been keenly sensitive to conditions affecting the money market of the world; the war in the Balkans, the Ulster situation and the war in Mexico. The cumulative effect of such conditions upon our borrowing power has necessarily been pronounced, and this of itself would have been sufficient to cause us to experience a decided check. But it is a mistake to suppose that the depression we are suffering from is peculiar to Canada or even to North America. Were that the case, Canadian securities would be in disfavor in London and other countries would be enjoying the patronage that has been cut off from us. The best information all goes to show that this is not so, that the depression is more or less world-wide, and that every nation is feeling the pinch of hard times. Financial firms in London that have specialized in Canada have on their hands, it is true, some undigested securities, but the same is almost equally true of firms that have specialized in Mexican, or South American, or South Africans, or Far Eastern securities.

"Canada's credit in London is, I believe, better than the average, but, like the others, shee need not look for relief until it is available for all.

"In my opinion, there is nothing which will do more to increase the credit of this country in Great Britain than to let those people know from whom we borrowed money; that our intention now is to devote our energies to placing upon a firm basis the many undertakings in which money has already been invested, and which now require careful management for their development.

"In this connection I am prompted to remark that the prosperity we have enjoyed of recent years has been more or less artificial. To a great extent it has rested upon a solid basis of profitable production, but to some extent it has not. Large sums of money have been spent rapidly, the chief object being, seemingly, to get things done, no matter what the cost might be, and without due regard to economy, or to the overhead burdens which the increased cost placed upon the industry. Manufacturers during the past three years have had more business than they could attend to profitably. We find ourselves handicapped for the time being by habits we have learned, and by methods we have become accustomed to, which will have to be abandoned. Irrespective of tariffs, taxes and freight rates, business kept forging ahead. We set for ourselves and for our work-people a standard of expensive living second to none in the world. In these and other ways our costs have become inflated as compared with the costs of competitors in other countries, with the result that our tariff no longer protects us to the same extent that it used to. I do not cite these conditions as an argument for higher protection, but rather as pointing to the necessity for more economical methods of production and development.

"Despite the constant criticisms of our tariff by those who would cut it down or remove it altogether, the fact remains that the advance we have made and the growth we have experienced as a nation have practically all come about under protection. It is also an indisputable fact that our economic develop-

ment has not kept pace with our development in other directions. We have settled our homesteads with speed, but perhaps with too little care; we have extended our means of communication far beyond our present requirement and in institutions for our better government, Federally, Provincially and municipally. By one means and another we have kept adding to our overhead expense without making sure the while that there was a larger output to justify it. The problem now before us is to make over-investments pay, to force ourselves to produce in corresponding quantities.

"To lower the tariff at such a juncture would be suicide, for its effect could only be to discourage us from doing the very thing we ought to be encouraged to do. One of the industries which the tariff of this country should have caused to flourish is the stock-raising industry. But to-day vast areas in the west are given over to the production of wheat alone, in which there is admittedly little profit, while stock-raising is apparently neglected.

"The trouble with our tariff is that it is not practical enough. When it fails to yield the desired result, as in this instance, it should be supplemented by some means that will afford practical assistance in getting things started in the right direction. It is wrong to argue because of agricultural conditions in the West, that our protective policy has failed. It is not the policy that has failed, but rather the farmer in omitting to take full advantage of the opportunities it affords him. If financial difficulties stand in the way of his doing so, let us try to devise some means of helping him. If custom and prejudice stand in the way, then let us insist on a certain amount of stock-raising as a part of the qualifications for every homesteader.

"The only comment I feel prompted to offer on workmen's compensation is by way of criticizing a popular misapprehension. Our organization is not opposed to the principle of compensation. We did oppose certain features of the Ontario act, some for the reason that we believed them unjust, others for the reason that we regarded them as impracticable of operation. Let me add now, however, my personal hope that when experience has shown what is best in compensation legislation we will be able to embody it in a Federal law, so that every workman in every part of Canada will enjoy that protection that is no more than his due.

"You may be asked at a later stage of this convention, to take some stand upon the question of the control of inland water freight rates. The recent appropriation of water rates to rail rates would not of itself seem sufficient to justify intervention by legislation.

"On the other hand, vast sums of public money are expending each year in improving and extending and maintaining our inland water systems, and those who pay the bills have perhaps a right to fix the maximum tolls that may be charged. It is important, however, not to overlook the effect which such regulation might have on the routing of business, and the encouragement it might give towards the diversion of traffic from Canadian to United States ports. For the present the lack of control is giving rise to no really serious hardship, and under the circumstances I feel it would be unwise to force the issue, pending such experiments as the United States may seem to make in that direction."

One of the features of the Wednesday afternoon meeting was the address of Chas. A. Dunning, general manager of the Saskatchewan Co-operative Elevator Co.

Mr. Dunning described the flow of farmers from the land to the cities, and blamed it on the increased cost of production, which had gone up twelve per cent. since 1909, and the increase in transportation rates, which had jumped fourteen per cent. since 1909.

He showed how the Western farmer is geographically worse off in regard to his markets than any other farmer in the world, the Argentine farmer being near the Amazon, the Australian near the sea, while Russian farmers and agriculturists of the United States were near rivers, and had an enormous consuming population right at their doors. The Western farmer had thousands of miles of rail and water transportation to reckon with, and the truth was that he was to-day selling his wheat for perilously close to what it cost to produce.

Mr. Dunning answered the demand of the manufacturers and Easterners as to why Westerners did not try mixed farming, by pointing out that many sections of prairie wheat land were totally unsuited because there was no water, though diversified farming was being encouraged. He said because wheat was more staple in price, it would for a long time be produced exclusively by many farmers. While developing his argument in this connection Mr. Dunning showed how heavily many farmers were pressed down by debts to implement-makers, and held that many homesteaders had paid toll to them from the first day they started farming. He said that 100,000 farmers in Saskatchewan owed $35,000,000 for machinery alone, and denounced indiscriminate credit as a danger to be guarded against, and urged his audience to discourage it.

Majority Free Traders.

Discussing tariff matters, Mr. Dunning said the association could assist the Western farmer by bearing in mind when making representations to the Dominion Government for an increase in duties the economic position of the farmer. The Western farmers were overwhelming free traders, and this had been brought about because they are the people who bear the burden of tariffs without receiving any benefit from them. Newcomers to the West were speedily imbued with the free trade ideas of those around them, and they could rest assured that if the protectionists of Eastern Canada put on the screws too hard during their time of power there would be a great change eventually, due to the increased voting power of the West.

No one regretted the division of feeling between Eastern and Western Canada more than he. On eachside of the great barren stretch north of Lake Superior two classes were developing, causing a division which may place the future development of the Dominion in jeopardy. They of the West were as loyal to their country and Empire as Easterners, and if all were to remain united in spirit they must make strenuous efforts to understand each other's ideals and each other's point of view. In short, they must compromise.

During the discussion on the Executive Committee's report, R. Fairbairn, Toronto, referred to the question of undesirable immigrants, and said he was afraid from his experience in the public schools at Toronto that many more mentally deficient entered Canada than was realized.

W. G. Edmonds deprecated the buying of imported furniture by the Government and railway companies, and the chairman assured him that this point should receive notice.

CLEVER SALES PLAN.

A very clever scheme to push the sale of sporting goods is being pushed by a progressive westerner. He offers a complete set of whatever things are required for the particular game in hand to the local team that wins the greatest number of games during the season. Incidentally, he and his clerks are taking an active part in the organization of new teams and falling heir to their trade without having to solicit it. The mere fact of their enthusiastic support makes their store the natural place for the others to go to for their supplies.

The idea has particularly appealed to the boys. The idea of getting a good bat, ball, mask and two varieties of gloves as the reward of enjoying themselves all summer long appeals to them as too good to be true.

For the fisherman, this dealer holds out the lure of a good outfit to the one who catches the largest trout during the present season.

Auto Accessories in the Hardware Store

Business Working Into the Hands of Hardware Merchants

THOSE who have been following the trend of the trade in connection with the retailing of auto accessories cannot help but notice the tendency on the part of retail hardwaremen to cater to the auto owner. The line of auto accessories is one that fits in nicely along with the other lines usually found in the hardware store. In every hardware store may be found many lines of goods which may be properly termed auto accessories. Add to these lines a few of the standardized specialties which may be secured, and the average retailer is in a position to go after the patronage of the auto owners. A manufacturer of auto supplies recently expressed his views on the subject as follows:—

"Anyone who makes a study of the retailing of automobile accessories cannot fail to see that the business is gradually working into the hands of the hardware dealers, and there can be little doubt that within the next few years hardware dealers will be doing a very large proportion of this business just as they are now doing a large share of the business on bicycles and bicycles accessories.

Better Merchants.

"Hardware dealers are getting this business away from the automobile dealers and repairers chiefly because they are, as a rule, better merchants than automobile men. They make it their business to keep in stock the salable goods and to advertise and display them so as to attract customers; whereas, a great many automobile dealers and repairers do not keep a stock of the supplies they might sell, and even when they do keep them, they do not use ordinary merchandising methods to dispose of them.

"Another particular in which the hardware dealer has the advantage over the automobile man is that he has generally been established in business for a long time, has a good credit standing and is well known in his community as a man that can be depended on to sell reliable goods and to stand back of them; whereas, the automobile man is often new in business and not widely known in his community.

Selection of Stock.

"The hardware dealer, who will secure the catalogues of half a dozen or more of the leading automobile supply houses, will notice what goods are handled by all or most of them, can decide what articles he ought to handle and, if he bears in mind the class of cars that is mostly used in his community, he should be able with comparatively small investment to keep on hand a stock that would be all salable goods and on which he could make a nice profit. In a community where most of the cars are small he will, of course, need to keep in stock only the small sizes of tires, tire protectors and other tire accessories. In other communities, where there are a great many large cars, he may find it advisable to carry a small stock of the larger sizes; but on account of the rapid increase in the number of small machines and the gradual elimination of the very large machines which is now going on, it would probably not be advisable for most dealers to handle large tires or tire accessories, excepting in cases where they can get them to order for customers.

The Time is Ripe.

"It is safe to say that the time has now come when the all live hardware dealers must seriously consider putting in automobile accessories if they have not done so. On account of automobiles now being sold fully equipped, it is not necessary to carry such a large number of accessories as formerly. An investment of even a few hundred dollars will give the dealer a stock sufficiently large to supply the trade of the average small town."

The auto accessory line is of such a vast and growing importance to the retail hardware trade that Hardware and Metal will from now on conduct an auto-accessories department and will endeavor to place before the Canadian hardware trade all available informtion which will assist the hardwareman in securing a large share of business from auto owners.

GUELPH CLERKS BRANCHING OUT.

Guelph, Ont., June 10.—(Special).—When the Retail Clerks' and Salesmen's Association of this city organized more than a year ago, it was only with the hope of securing annually a weekly half holiday during the summer months. But a banquet last week—the first held by the association—marked a new era in the work of this body. It is now branching out along educational lines and is destined to become a highly successful organization from this standpoint.

Among the items on the programme were several solos and musical numbers by members of the association. This is an organization which recognizes both sexes on an equality basis and although the president, Mr. Tovell, and the secretary, C. W. P. Curzon, belong to the so-called "sterner" sex yet the ladies are interested workers and graced the dinner by their presence.

A talk was given by B. T. Huston, Toronto (Canadian Grocer staff), on the methods of selling goods which would class a clerk in the ranks of salesmen, and on eliminating the unnecessary work in the store so the business may run along on the most efficient lines. He spoke, not from the standpoint of a man behind the counter, but as one whose duties naturally cause him to be interested in salesmanship and efficiency and as one who had observed these things practiced by good merchants whom he had interviewed and merchants from whom he purchased goods. Each point was illustrated by an actual experience that had come under his observation.

Knowledge of the goods, knowledge of the customer, courtesy, satisfactory service, and aggressiveness, he pointed out, were all essential to the good salesman.

"But the degree of success of any salesman," he added, "must be based upon the amount of goods he sells over and above the actual demands of the customer whom he serves, providing, those goods are sold at profitable prices. Almost anyone can sell a customer an article for which she makes a special trip to the store but it requires the work of a salesman to sell her other goods to her entire satisfaction."

A window trimmer, a show card artist and an ad-writer who can CREATE demand by his work must also be included in the ranks of the salesmen.

Manner of approaching a customer who has just come into the store and of methods endeavoring to make an extra sale when the customer had secured what he came for, were referred to. In regard to the latter, Mr. Huston referred to the kind of answer that usually followed the negative question. "If a customer were asked the question 'nothing else?' 'You wouldn't want a ———, to-day, would you,' etc., the natural answer was 'No.' 'Anything else,' is better than 'nothing else,' but it is not altogether conducive to a favorable answer. Better offer a definite suggestion about why some particular line should be bought—then the customer has something tangible to consider."

"Efficiency," he said, "was nothing more than doing the right thing at the right time. To do this one must know what to do and then how to take the shortest and least expensive route to accomplish the act." Cases were cited where this principle had cut down costs

(Continued on page 57.)

HARDWARE AND METAL

VOL. XXVI. No. 24 Toronto, Canada, June 13, 1914 Two Dollars per Year

Hardware and Metal Electro Service

ELSEWHERE in this issue an announcement is made of a new editorial service which has been instituted for the benefit of Canadian hardwaremen. For several years past Hardware and Metal has noticed an increasing interest among our readers in the articles we have been running, dealing with the question of retail hardware advertising. On many occasions hardwaremen have complained about being unable to secure, at a reasonable cost, small electros of staple hardware lines suitable for use in preparing advertisements for newspapers, catalogues or circulars. Practically all hardwaremen who have had experience in retail advertising agree that hardware advertisements should be illustrated. An advertisement without an illustration will often pass unnoticed. The lines offered by hardwaremen are so different to most other lines that when illustrated, they immediately attract attention. Many merchants state that the electros supplied in the past have as a general rule been very large and take up too much space in the newspaper. While it is generally admitted that one large electro will certainly attract more attention to the particular line featured, there are hardwaremen who feel that in the space occupied by one large electro they could show to advantage several lines of seasonable goods, providing suitable electros could be obtained. A few Canadian hardware firms have adopted the small electro style of advertising and in future issues of Hardware and Metal the advertising experiences of these men will be given. On the two pages elsewhere in the issue are shown eighty-one electros of various staple lines. These electros are being offered to readers of this paper at fifteen cents each. From time to time Hardware and Metal will publish advertising suggestions in which these electros will be used. Advertising is a great energizing force which is playing an important part in the business of to-day, and it is the intention of the editorial department of this paper to render an advertising service to our readers, and to assist them in their advertising problems to an extent not attempted by any other trade paper published in this country.

The Art of Successful Buying

COMMERCIAL reports give as the chief cause of business failures, the lack of capital that hampers the merchandising of the average small merchant. If laid upon the operating table and properly dissected, this simple statement might be found to be replete with startling facts.

It is simply another way of saying that the capital, such as it is, large or small, is not properly laid out so as to accomplish the maximum purchasing results at the minimum expenditure. The merchant must cut according to his cloth. If his capital be small, whether it be that of his initial venture in trade or the capital of next month's business, his outlay of any one line must necessarily be made accordingly. He must have at least a fair representation of all good lines on his shelves—and last, but not least, a quick turn-over.

The latter is the milk in his cocoanut. No hap-hazard buying of merely attractive articles can be depended upon to accomplish this result. The buyer must know, as the result of scientific study, the absorbent ability of his trade. It may be a case of deciding whether the local farmer's wives are ripe for a campaign of wringers or, on the other hand, whether a high-class city trade have become sufficiently educated, to warrant the purchase by his store of a supply of electric stoves and appliances. Can they soak these articles up as a dry sponge soaks up water; or, must the new stock be thrown at them, to splash off as water does off glass?

With a certain demand in view, the wise buyer discounts misfortune, and incidentally enables himself to discount his orders and get one hundred per cent. efficiency out of his shelves, instead of the shop-worn depreciation of mouldy goods. The mere desire to be a good buyer cannot create the necessary talent off hand. It is of no avail to study the jobber's samples unless, before leaving home, the crop conditions have been analyzed, both through the medium of local opinion and government reports. Is the community prosperous? Is it in the financial condition in which it can afford to purchase conveniences; or is it buying only the most necessary of articles?

Business success depends upon many conditions, any one of which may be said to be vital. But of them all, none is more essential to success than the initial proceeding, the foundation of the business structure, the art of successful buying.

The Business Situation

NO new conditions in the business situation developed during the past week. The retail trade have found business fairly satisfactory and there is a very good demand for all summer lines. Paint manufacturers report that the demand for paint continues very brisk. The metal markets are still very quiet and orders are of a hand-to-mouth character Owing to the fact that orders are scarce, considerable price shading has taken place. Hardware jobbers report that conditions, while they might be better, are fairly satisfactory and that collections are showing improvement.

Stove manufacturers are finding a ready sale for summer stoves. Some manufacturers complain about a shortage of orders. Trade at present is governed largely by consumptive demand and weather conditions. Crop reports from the prairie provinces continue to be exceedingly cheerful. The increase in acreage in each of the three provinces of the middle West is stated to be very substantial.

Probably the good crop outlook and the better prospects for the farmer are the cause of a much better tone to business from the head of the Great Lakes to the Coast. It is quite true that at practically all large urban centers in the West there is considerable unemployment. This condition will no doubt obtain until the adjustment following the abnormal urban development and the period of abnormal railway construction is completed. This unemployment, however, is not altogether an unmixed evil For some years labor generally has been in a position to select for itself the most congenial kind of employment. Now it would appear that labor generally will have to accept such work as is obtainable, a change in conditions that will redound to the advantage of the entire country. Necessary work is not always the most congenial. The entire Dominion needs more than anything else an abundant supply of labor for the cultivation of the soil, and the present seems an opportune time for special efforts towards directing surplus labor to this form of activity.

Western Wheat Outlook

THE wheat situation is beginning to take shape where it is a direct influence on business conditions in general, and from Western Canada the reports are that the outlook has never been better, although as the result of a late spring the growth is none too far advanced, and any continued drought would soon have effect. However, the rains of the past week have minimized this danger to a great degree and the only serious harm is likely to be caused by hail storms. Summing up the situation as at present, one authority makes the general prediction that, granted normal conditions throughout the rest of the growing season, the West should have the best crop of its agricultural history. The Government reports show the Spring wheat in Alberta to have come through the winter very favorably, with a loss of only 15 per cent., as compared with 43 per cent. winter-killed last winter. In Ontario the loss by winter-kill was 19 per cent., as compared with 18 per cent. a year ago.

Estimates of the Western crop in the rough are beginning to make their appearance amongst the grain brokers and the figures are now placed at 200,000,000 bushels. The latest Government report of the American crop is also bearish, and the figures indicate a yield of 900,000,000 bushels.

The flour situation continues quiet and although some small orders for export have been placed, the bids have been out of line; however, late declines in the market may help somewhat. Ontario millers find the situation rather dull with winter wheat prices keeping the market stiff and the maintenance of prices for mill feeds is helping out financially.

Scanning Advertising Mediums

THE movement in Canada and the United States to eliminate misleading statements in advertising has now reached a logical development in the formation of a society to investigate the claims of circulation of various advertising mediums If the public, heretofore, have been at the mercy of unscrupulous claims on the part of some retailers, and the latter have been misled by some jobbers; both alike have been preyed upon by a certain percentage of advertising solicitors whose claims were "marked up" without coming under the usual retail process of a subsequent marking down." This, as in the case of the honest advertiser, was unfair treatment for the honest solicitor of the advertising medium. Hence the formation of The Advertising Audit Association, an organization of advertisers, publishers and advertising agencies to wipe out the circulation "liar." The Association, which already includes several Canadian members will conduct systematic examinations of the books of advertising mediums, certify to their worth, and transmit the information to the members. Points considered will be quantity, quality and distribution, the three cardinal divisions of advertising worth. A fund of over $100,000 has been pledged for the expenses of the investigations, which promise to develop into a national campaign.

Editorial Briefs

SUMMER WEATHER MEANS good business for the aggressive merchant.

* * *

THE TIME IS HERE TO sell screen doors, refrigerators and summer goods. Don't wait until it is too late to dispose of them.

THE FINAL TEST OF persons and things is usefulness. The method that does not serve a purpose should be relegated to the ash-heap.

NOTHING WORTH WHILE is ever accomplished by those who wait for certainties.

Self-Propelled Vehicles for Commercial Purposes

Toronto Hardware Firm Using Ten Machines Gives Information Regarding the Comparative Cost of Conducting Horse-Drawn and Motor-Propelled Service—The Results of Motor Service.

Written for Hardware & Metal by Chas. E. Screaton, Sales Mgr., H. S. Howland, Sons & Co., Toronto.

IT is now five years since H. S. Howland Sons & Co. inaugurated their travelers' auto service and motor truck delivery. The decision to do so was not reached in a single night, but was the result of a close and impartial study of the conditions governing the apparent necessity for the change. I believe, and, in fact, am so informed by the automobile company, that we were the first house in Toronto to use self-propelled vehicles for commercial purposes on a large scale.

The causes leading to the decision referred to may be briefly summed up as follows:—

Firstly, it was felt that such a change would enable us to give an improved service to our customers, a reason all suffieient in itself. Secondly, it was proven by a series of well checked charts that the use of autos would show a greater proportionate return on the investment and current expenditure than under the old system.

The results have amply proven the premises.

Our present stock of cars has grown up from a small beginning, for we made haste slowly, and so began in a more or less tentative manner. The first purchase was that of a Ford runabout for the use of a city traveler. The experiment justified itself, so that the following year saw two more cars of the same variety added to our equipment for the use of city travelers and one motor truck for city delivery. Since then five more Ford runabouts, one Packard and one White truck have been put into service. The latest purchase occurred just a few weeks ago.

Having disposed of the old truck, we have at the present time eight cars and two trucks in actual operation. The two latter are used in the city. Of the cars, four are in use here, one at each of two other Ontario points, and two more in the country adjacent to Toronto.

The advantages derived from the change are self-evident to one who has followed the operation of both plans.

Under the old plan a city traveler's time was spent largely on slow street cars and in long and tiresome walks. Under the new, he can get into his car and go at a good rate of speed directly to the door of his customer, thus enabling him to meet the latter in a more pleasant frame of mind, and incidentally enabling him to make a larger number of calls per day. In this case, of course, the expense of operation of the car exceeds the small amount the traveler would have required for street car traveling, etc. These cars are stored at separate garages, so as to be convenient to the homes of the respective travelers.

It is in the use of the two country cars, and of those two used in and out of two of the smaller cities, that the actual saving from week to week is most noticeable. The gain in amount of ground covered and number of customers called on, is equally true of both city and country. As against a horse's average speed of eight miles an hour, we find that our cars easily make eighteen. The cost of gasoline and normal upkeep on the road averages six dollars a week less than that of railroad and livery fares. These figures allow for the usual hotel garage charge of fifty cents a night for car storage. The minimum daily run averages about fifty miles, the maximum about one hundred. In the course of a five-day week a traveler will usually cover two hundred and fifty miles at least. The amounts vary with the population and road conditions of the districts that are worked. One of the traveling staff works a country that boasts of so few railroad connections that under the old plan the cost of working it would have been almost prohibitive. It is in such a district as this that we are barred from during the winter months, so that the country cars are in operation only from about the middle of April to that of November. The city cars, of course, operate during the whole year.

When repairs are necessary, the car is turned over to the nearest Ford agent for same.

In the case of the trucks, it is not so much a case of the increased mileage, which, by the way, is considerable, as the gain in ton miles. To secure results, the trucks must have a full load on. It would be suicidal to allow them to burn up fuel on long trips with light loads to small stores on the outskirts of the city.

The trucks are of the one and a half and two ton sizes, and we usually give them a load of four thousand pounds. They are inspected monthly by the manufacturers' agents, as they naturally require more care than a runabout. Care

Auto Trucks and Cars used by H. S. Howland Sons & Co.

is taken that there is no duplication of routes and each truck works the same district daily. By a careful working out of their itinerary beforehand, we are able to furnish an excellent service in this respect

For the accommodation of customers we handle a number of "enclosures," going and coming, small lots of hardware that must be delivered by us to a jobber in another line, in order that the saving of the lower freight rate of the larger shipment may be gained for our customer. Or we may have to call for "enclosures" at some other jobber's for shipment with our goods; also there are certain roads in Toronto and its vicinity that are not suitable for the use of autos. It is for work of this nature that we have retained a few horses.

I believe that one of the greatest benefits derived from our increased number of calls and deliveries is of a more or less intangible order, namely, that elusive thing that is called goodwill. The customer appreciates these extra calls. They indicate that we value his patronage. There can be little doubt that this fact can be applied to the advantage of the retailer himself in his dealings with his customers. In the larger centers, at least, there can be no doubt that the retailer can use motor trucks for his own deliveries to the mutual advantage of himself and his customer.

With reference to the combined runabout and truck service, it is safe to say that actual running expenses are just about half of what they used to be. But this statement does not include the extraordinary costs and losses that are peculiar to motor vehicles. Our tires usually stand from six thousand to eight thousand miles of travel. The cost of replacing one runs from eighteen to twenty dollars. Other parts require replacing at times, and there is also insurance to be added to the list. The first year's depreciation amounts to 25 per cent. of the value of the car and that of succeeding years twenty per cent. The total of these extraordinary costs and losses offset the gain made in saving of running expenses proper, so that at the end of the year the cost of upkeep is slightly in excess of that of the old method. Possibly, if horse breeders and wagon manufacturers had compiled the statistics on their goods that automobile manufacturers have on theirs, we should find that the items of depreciation, etc., entered more largely into the eventual value and life of horses and wagons than we suppose, in which case our figures would have to be revised more completely in the automobile's favor.

However, although the end of the year shows that, after allowing for depreciation, our present costs are higher than formerly, it also shows greater returns in mileage and number of calls made and in business done, so that the result is all in favor of motors.

We feel that the results shown have amply justified our desire to keep in the forefront of progress, in order that we might better furnish the improved service that modern business demands and must have, and thus take our reward in the knowledge of an increased efficiency and a larger number of satisfied customers.

Letters to the Editor

Editor,
Hardware and Metal,
Toronto, Can.

Dear Sir,—

I am writing on a subject which I think should receive the earnest consideration of every Canadian hardwareman. It might be briefly put in two ways. First—"Why is there a depression in business in Canada?" The answer is just as brief—"because Canadian people buy American made goods.

Second—What can be done to make business better in Canada—and just as briefly they answer it. If the merchants will buy Canadian goods —Canadian factories will be busy.

The writer was in an Ontario city not long ago. There was a large hardware store there situated near a factory district. The owner of the hardware store said business was very bad—in fact that he could almost afford to close up because all their business was done with the factory employees and the factory employees were not working.

This same man had a large stock and this was composed of fully 75% United States goods. The thought struck me that if this man had sense enough to buy Canadian-made goods then the workmen would be employed in Canadian factories and it was forcibly brought home to me the necessity of keeping Canadian labor employed.

On certain lines of Metal Goods the Duty has been taken off going into the United States so that they may now be entered free and I know of a Company who tried to do an export business within the last three months and were advised by the buyers in the United States that they would purchase American Goods even at a considerable advance for the reason that their own work shops had to be employed—this is real loyalty.

There is no question about it at all —that if jobbers and Retail Stores purchased Canadian Goods at equal value and they can be had at equal value both in cash and quality, in almost every line—then the industries in this country would be busy instead of at the present time fully fifty per cent. of all the industrial classes of the country going idle.

It is a well-known fact, of course, that any line of product made in the United States may be dumped in the Canadian market regardless of Customs' Laws—sales or regulations and at a price 25% to 50% below the regular market price in the United States. This has been going on for years and has not been improved at all under the present administration.

Briefly, there seems to be only one solution and that is for the people who are going idle now to take to heart the lesson when they purchase in future, to demand that the Goods be "Canadian" made.

MANUFACTURER.

HALF HOLIDAY LISTS.

Hardware and Metal has had a number of reprints made up giving a list of towns in which half holidays are being observed. Manufacturers or travelers desiring additional lists can secure same free of charge by sending a request to

Since last week the following additional announcements of half holidays have been received:

BARRIE.—Wednesday afternoon during July and August.

BRANTFORD.—Grocers and butchers close Wednesday afternoon, June, July and August.

MARLBANK.—Wednesday afternoon, June, July and August.

NEWBURGH. — Wednesday afternoon during July and August.

PRESTON.—Some stores close Thursday afternoon.

WELLINGTON. — Thursday afternoon during June, July and August.

HIGHGATE, ONT.—Close Wednesday afternoons during July and August.

MARKHAM, ONT.—Close Wednesday afternoons during June, July and August.

CAMPBELLFORD.—Close Thursday afternoon during June July and August.

TRENTON.—Close Wednesday afternoon during June July and August.

BRIGHTON.—Close Wednesday afternoon during June, July and August.

COLBORNE.—Close Wednesday afternoon during June, July and August.

NAPANEE.—Not yet decided; possibly Thursday afternoon during June, July and August.

Powasson, Ont.—The hardware store of Jas. Arthurs has been destroyed by fire.

Paying More Than Wages *

Profit Sharing as an Incentive to Co-operative Effort in Selling—Which is the Most Effective Basis for Computing Profit-Sharing?—Data Gathered From 136 Merchants.

By George L. Louis.

THE final action in selling — the contact between clerk and customer—involves the most troublesome problem in retail merchandising. All the knowledge and skill, money and energy which have gone into the assembling and arrangement of stocks, into window display, advertising and the countless details of store service count for nothing unless the salesperson sums these up and expresses them in courteous, intelligent and interested service to the potential buyer.

How to make sure of that interest and applied intelligence — how to get the clerk to look at each customer and try to treat each customer as the proprietor himself would, is the crowning task in retailing. One way of solving it—according to the judgment and experience of hundreds of successful merchants—is profit-sharing. It is the purpose of this article to consider some of these successful experiments and to determine whether or not profit-sharing actually secures the co-operation and personal initiative among sales-folk which every storekeeper is seeking but which few attain.

I have just finished gathering data from one hundred and thirty-six merchants who have been practicing profit-sharing with their employees for periods varying from six months to five years. Inasmuch as every state is represented by these merchants, and as the small town, as well as the large city, and also the small, average sized and large stores are included, the result from the experiences of these one hundred and thirty-six stores can be accepted as fairly authentic.

Although quite a few of these stores have found that their particular methods of pursuing this plan have not brought the results anticipated, they are unanimous in cataloging it as the only feasible, practical means of linking a sales-force strongly with a store.

My almost daily contact by correspondence with merchants in nearly every state, and my frequent visits of investigation to retailers for manufacturer clients, have enabled me closely to follow and analyze the rotation of conditions that lead up to and climax buying action. All preluding sales incentives terminate in and are dependent upon the clerk behind the counter. Every means that has been utilized to arouse interest, to awaken desire, to impel action, be it advertising, window display, store environment, or any of the many other factors, are all for one purpose—to bring the customer face to face with the clerk. But if that clerk is not in hearty accord with the store and its interests, if that clerk is indifferent to the store's success, what is the probable result? Approximately forty yer cent. of possible sales are lost and at least fifteen per cent. of the sales that are culminated never have a "comeback;" that is, the customer is not so impressed or gratified by the treatment and service received that he or she goes back to the store to buy a second time or a whole series of second times.

When you consider what is done to smooth an uninterrupted path to the doors of a retail store, what thought, time, money are concentrated upon this one object, you realize how vitally important is the last act—the clerk's part —in the sequence of events that end with the exchange of money for goods. Given an indifferent, careless clerk, and all the preluding work that has incited the possible customer to go to a store in a buying state of mind, however effective this preliminary work may have been, will most likely be of no avail. The intimate contact between buyer and seller supersedes all foregoing influences and determines final action.

I have watched a great number of merchants attempt in a variety of ways to overcome the indifference of salespeople and win their friendly interest. I know of at least one store where each clerk was set to watch his fellow-clerks and was given rewards for reporting omissions of commissions that violated store rules. I have seen at other stores a most rigid code of regulations with heavy penalties exacted for any infringement thereupon; again, I have been in retail establishments where bribery, promises and flattery in all conceivable forms have been employed to gain the clerk's good will. Temporary success has rewarded some of these efforts. But nothing of a permanent, healthy nature has ever resulted from such attempts. The constant, heart-warmed interest of the clerk in the efficiency of the store's activities has never, to my knowledge, been gained by means which did not frankly take into account personal ambition and personal desire for gain.

Profit-sharing as an Incentive to Co-operative Effort in Selling.

Profit-sharing with employees not only seems to have solved this problem, but has been found to be triple-actioned in its accomplishments. In addition to its primary purpose and success in affiliating employees with a store, profit-sharing has been demonstrated to be a very influential advertising factor and of equal merit in inducing patronage. The right plan of sharing profits with employees removes the purely selfish interest of the employees in their individual sales and promotes a sincere concern on the part of each clerk for the prosperity of every department of the store.

Giving a bonus to a clerk for individual sales does not identify the clerk with the best interests of the establishment. He is then working for himself without regard for the profit or advancement of the store as a whole. True, if he is thus induced to work zealously for himself, he must of necessity work earnestly for the store; but he is very likely to do more ultimate harm for the store than good. This has been proven to be particularly true where a bonus has been given for selling "P. M.'s" stock that is old or hard to dispose of for one reason or another. The persuasive clerk does not find much difficulty in selling such goods; but the after-effect of a dissatisfied customer is always to the store's detriment. This was the first profit-sharing form that was introduced into retail selling. The attempts to develop this bonus-giving idea into a fixed profit-sharing plan have not been successful, as far as I can learn.

SALES *increases and less waste in sales energy follow when clerks say "we" instead of "it" and "they"*

*Reprinted from "System," the Magazine of Business.

ONE merchant figures that forty per cent of possible sales are lost and fifteen per cent of actual sales never have a "comeback"

Which is the Most Effective Basis for Computing Profit-sharing?

The one hundred and thirty-six merchants upon whose experience with the profit-sharing system this discussion is based, can be divided into three classes—those who share profits based on individual sales, on departmental sales and on the general sales of the entire store. Only eleven of the one hundred and thirty-six are using the first method at the present time; forty-one are applying the second method and eighty-four the last. Thirty per cent. of the eighty-four, who are practicing the last plan of profit-sharing, at one time used one or the other of the first and second methods.

Of the eleven merchants using the bonus-for-individual sales idea, the experience of a dry goods merchant in a Pennsylvania town is typical. It was in use in this store for nearly two years but has now been abandoned. Although it induced an active, aggressive interest in the clerks, it tended to separate them and their departments instead of forming a closer organization of the whole store.

"My clerks had never worked with me as I wanted them to, and as they should," the proprietor of this store told me in relating his experiences with this profit-sharing plan. "They timed themselves so they would get to work at the very last moment and they would rush out immediately when the closing gong was sounded. Instead of arranging their stocks to the best advantage and working together to keep their departments trim and inviting, they idled their time away. So I instituted a profit-sharing plan to counteract this indifferent and wasteful attitude of my clerks.

Drawbacks Attendant on Paying Dividends on Total of Individual Sales.

"The method I adopted failed to work out satisfactorily, though the basis idea is sound, and I am satisfied that some profit-sharing system will be hit upon sooner or later which will do the work. The plan I had used was to pay a percentage dividend on each clerk's individual sales. It got them hustling fast and earnestly, but in their anxiety for personal sales, from which they would get dividends, they used every means and all sorts of tricks to cut out the other fellow. They would hold customers as long as they could, try to sell them only the highest priced goods and would refuse to do anything for any other department, help dress windows or leave their sections for any other reason. You see they didn't want to lose a single sale. Well, it got so bad that I had to drop it altogether. Every clerk in my store was finally working against and fighting every other clerk. Disputes and quarrels were daily occurrences. But I am going to work out some plan of profit-sharing yet that will get them together on a basis of help and co-operation in making sales."

I found the same weakness in profit-sharing based on sales in departments. This method separates departments as the other plan separates the clerks. In the store of average size, where the clerks sell at several different counters department dividends are not feasible at all. In the forty-one reports which I have of the stores that share profits by department sales, serious gaps in the selling activities are apparent in each instance. To illustrate: I visited a men's clothing store in a southern Illinois town where this plan was in operation. I noticed one clerk who took his customer from the neckwear counter to the hat section, then to the clothing department. A sale was made at each place. The scowls of resentment that were very visible on the faces of the other clerks as they stood idly by while the customer was being led about by the fortunate clerk, showed plainly how they felt; and the determined manner in which one was seized when entering the store, surely did not have a pleasant or reassuring effect upon the customer.

Another serious effect of this system, I found, was that the departments containing the highest priced goods were enthusiastically boomed by the clerks, while other departments which had the lower priced merchandise were practically ignored. The manager of this store had not yet become aware of how his profit-sharing plan was disturbing internal conditions. In answer to a question, he said he was well satisfied with the results; but I doubt if he can operate this method very long and retain his clerks, or build up a well-balanced, steady trade. In every instance where there was competition of this sort between clerks or departments, I noted the same lack of organization purpose and a division of interests, which reacted on the sales-force to the detriment of the store.

How to Promote the "Get-together" Spirit in Increasing Store Sales.

The eighty-four retail stores practicing the plan of profit-sharing according to length or service or amount of salary of each employee, represent on the whole the most successful stores of the entire one hundred and thirty-six. Twenty-four stores of the eighty-four which shared profits on a broad, general basis, apportioned the profits according to the length of time each employee had been with the store. One California merchant told me that during the five years he had been using this method he had not been forced to discharge a single employee, and none had left him of his own volition. Forty-two of the eighty-four allotted the dividend according to the salary each clerk received. The effect of this method of profit-sharing is well illustrated by my own experience in a fair sized department store in an Iowa city.

I went into this store to buy some handkerchiefs. After completing my purchase, the clerk, in a casual, but wholly cordial way called my attention to a display of neckties at the counter opposite. He explained that a new shipment had been received the day before and expressed his conviction that they were the richest quality silks and the most alluring patterns and colors that he had ever seen anywhere. "I'm sure you would enjoy seeing them, even if you do not care to buy a tie to-day," he declared. And before I could make up my mind whether I wanted to see the neckware or not, he had ushered me across the aisle to the department. There he addressed another salesman: "Mr. Thomas," he said, "will you show this gentleman those new four-in-hands that came in this morning?"

Well, I bought a tie and was going to leave when the second clerk asked "Have you seen the new feather-weight velour hats they are wearing this spring? We have them in some very attractive shapes and colors in the hat section." I was about to admit my ignorance and go over to the hat section which he was pointing out to me, when it suddenly came to me that I was being "passed on" in a very pleasant and effective fashion.

Paying Profit-dividends on the Ratio Set By the Clerks' Salaries.

These clerks, I saw, were all working together for the good of the store. I didn't go to the hat department; instead I immediately sought the manager and talked to him. He told me in answer to my interrogations, that this store was sharing its profits with its employees, not on the basis of individual or departmental sales but with the clerks as a whole. This was the plan; one per cent. of the store's total cash sales was given to the clerks and was proportioned according to the salary each received. Every dollar's worth sold throughout the store increased the dividend awarded to each clerk.

Let me quote the manager's own words, as he related the effect of his profit-sharing plan:

"We had the average grade of help. They were making all the money they could with the least amount of work until we began this dividend-paying policy. Now, we've got about sixty-five live, hustling partners who are almost as deeply concerned in this store as I am. Our sales have increased more than a third in eighteen months and the selling costs are considerably lower than before. We owe this all to the fact that we're sharing our profits with our sales force.

Putting a Premium on Sales Made to Cash Customers.

"This is how we do it: The twenty-dollar a week clerk gets twice as much in dividends as the ten-dollar a week clerk. No matter who makes the sale or from what department it is made, they all get their percentage of the sales. Even if the sale should not bring a profit to the store, they get one per cent. on every dollar's worth that is sold. But this dividend is allowed only on cash sales that are made.

"This induces the clerk to give better service to cash customers and not to overdo their service on credit accounts, as they are inclined to do. When a clerk is absent from the store, we deduct his dividend earnings accordingly. This includes his vacations. You ought to see how regular they are in their attendance. They seem to be able to overcome such ordinary indispositions as headaches, toothaches and the like, which formerly kept them from their work one, two, or three days at a time. And the main thing is that we are getting as near to perfect service from our clerks as you could ask.

"But the effect of our profit-sharing plan is not confined to our employees alone," he went on. "It's been worth a good deal to us in the free and influential advertising it has given to the store. When I began it, all the newspapers had long articles about it. In our daily advertising we never forgot to mention that our employees share our profits. The public likes the idea. They are glad to know that the clerk who waits upon them will get some of the money they spend, as well as the other help.

"It has brought our employees so close together, all working for their mutual benefit, and it has brought me and other members of the store so close to our clerks, that we have formed a social organization. We meet once a month at a dinner, have various entertainments and talk shop. The profits we share with our employees has gained for us a good will and whole-souled interest that we were unable to get in any other way. I consider this the very best investment we have ever made. It is paying one hundred per cent."

The quiet, skilful way in which customers are "passed on," as in my own experience, and as I afterward had an opportunity of studying, shows how earnestly and successfully each clerk is working for this merchant. During the entire afternoon which I spent at this store, I did not see half a dozen persons who entered leave without making one or more purchases. And it usually was more than a single purchase in each case.

Bonus Payments When Individual Sales Increase Over Previous Year.

The remaining twenty of the eighty-four stores share profits computed upon the increase in personal sales. In a few instances the bonus or commission amounts to two per cent. of the net increase in sales as compared with the corresponding period of the previous year. Some of these concerns give a profit bonus based upon the yearly or half-yearly increase of sales; others upon a monthly or even weekly increase. It has been clearly shown that the oftener such bonuses are distributed, the more zealously and heartily the clerks respond to the incentive offered by these extra dividends.

One St. Louis store reports a 20 per cent. general yearly increase since the plan of paying a bonus on monthly sales increases has been inaugurated. In one section, in April of this year, the six salesmen earned bonuses amounting to $79.60, which indicated a total increase for the section of $3,980 for a single month. Two of the six received almost half of the total, one man earning $20.38 in addition to his regular salary, the other $19.10. In fact the head of the section was the only man in it who did not capture a bonus. In addition to the money reward, the winning of a monthly bonus, in this store, entitles the salesperson to an extra half holiday.

This is profit-sharing in the narrowest meaning of the word, because it divides with the clerk who makes the sale a respectable slice of the profit accruing from it. The danger in this particular method, as I have already suggested, is that it puts a premium on individual effort without providing any balancing influence to keep the spirit of team-work in the department or section alive. If this compensating influence can be supplied, through the personal influence and enthusiasm of the department head, for instance, the bonus method has the distinct advantage of giving the clerk a direct individual incentive to work harder and furnishing the owner with a definite and certain basis for computing each salesperson's dividend.

This method of gaining the sincere, hearty interest of employees is being practiced by many retail establishments in large cities with equal success. The owner of a large men's clothing and furnishing store in Chicago told me that profit-sharing was the only way that a blood-bond could be created between a store and its employees. He said before his store inaugurated this practice, clerks would be heard to refer to the store as "it" and the organization as "they"; but since the profit-sharing began, they all have made themselves real partners of the concern. Now they think and speak of the store as "ours" and the organization as "we."

I am convinced by the results that I have been shown and have personally observed that profit-sharing is the quickest, the most economical, the surest and most effective method of metamorphosing the indifferent, thoughtless employee to a keenly interested, active co-partner in the business.

BY THE OFFICE BOY.

Recently M. P. Barnes, the Le Pas traveler for the Miller-Morse Hardware Co., Winnipeg, was held up by a burglar in the hotel in which he was staying, at Canora, Sask. The office boy at Winnipeg headquarters was so affected by the story, he sat down and wrote the following lines right off the reel:—

M(urder) P(roof) Barnes.

By Kipling McKaig.

The gunman came down where the drummer was sleeping;
Suspecting no danger, he peacefully lay;
The arms of Orpheus steadily keeping
The plump little figure there snoring away.

The gunman came in and his hoofbeats were silent;
A slight noise he made as he opened the door;
The drummer awoke and his waking was violent,
He landed his man with a whack on the floor.

The pistol went off, and it roused up the city
Of three hundred odd an' the two in the fight,
The gunman cleared off, got away, what a pity!
But left his revolver behind in his flight.

The Winnipeg house should be proud of its drummer,
Who looks at a pistol and is not afraid,
There's just one opinion, that Barnes is a hummer,
An' three parts awake when's he's tucked up in bed.

Proper Handling and Filing of Correspondence

Filing correspondence, if confusion is to be avoided, must be carried on according to a definite plan. The plan here described is designed especially for filing municipal departmental correspondence, yet it is full of suggestion for the inventive mind to meet special contingencies. We invite inquiries from our readers regarding difficulties they have met with in this important department.

THE handling and filing of correspondence in a business organization of any size is more or less a complicated matter; but in an organization having a large number of departments, and where letters have to be passed from one department to another, to so handle the large amount of correspondence received that each letter will receive proper attention, and, when finally answered and ready for filing, will be filed in such a way that it will be immediately obtainable should occasion arise, is indeed a difficult problem.

Such, however, is the work to which S. Edgar Trout, municipal accounting and efficiency engineer, has given a great amount of time and thought. When a young man, Mr. Trout decided to become an expert accountant. To this end he bent all his energies and efforts. Realizing the necessity of keeping in touch with the advanced thought of the world as applying to his special field, he was always ready to investigate and adopt any labor-saving device for the benefit of accountants.

When the City of Philadelphia wanted the services of an expert accountant capable of taking charge of the innumerable details connected with its ever-increasing correspondence, Mr. Trout was among those who took the examination. His previous experience enabled him to carry off the honors and secure the coveted position.

The duties of this position included the scientific handling of business correspondence, and in less than two months, by working day and night, Mr. Trout devised a system which has received a great deal of attention from the officials of Philadelphia and of other cities. A feature of the system is a series of symbols, consisting chiefly of combinations of letters, by means of which correspondence pertaining to any department of the city's business may be found in the files instantly. Fig. 1 shows the diagram arranged by Mr. Trout for the Department of Public Works of Philadelphia, and gives the symbol letters of each of its units together with those of other bureaus and departments. It will be noticed that each "unit" leading from the department contains a symbol letter. If a correspondent writes the department on any subject, the department clerk stamps the letter with a rubber stamp, called "record form," gives it a number to correspond with the business register he keeps and adds the symbol letter of the bureau to which it should go for attention. For instance: a letter regarding street lighting would be stamped "L" and referred to the Lighting Bureau. In answering the letter, the Lighting Bureau sends the original, together with the answer and carbon copy, to the Department of Public Works, which department writes the correspondent, enclosing the answer of the Lighting Bureau. The original letter and the carbon copies of the answer are sent to the file clerk, who files them under the proper alphabetical subdivision in the division having the symbol letter combination "D-L." Where more than one subject is to be considered, the symbol letter of each department to which the letter must be referred is placed on the original letter; for instance: if a question relating to water service is asked in the same letter, the initial "W" would be added, making the symbol combination on the record form "D-L-W." The file clerk would then have each department in turn write out the answer to that part of the letter in which it is concerned. The original letter, together with the answers and carbon copies from each bureau, are referred back to the department and handled as previously described.

Fig. 2. is a diagram which Mr. Trout has arranged and adopted in connection with his new rules to meet the demands of the ever-increasing business of large cities. It will be noticed that the office of the mayor controls the departments of public works, public safety, etc., and that these departments in turn control the various bureaus. With this system of symbol letters standing for different units of organization—each department or bureau—the scheme of filing and locating correspondence is readily understood.

Fig. 3 shows a portion of the diagram for a system installed in the Bureau of Lighting of Philadelphia.

Mr. Trout's rules for filing correspondence are as follows:

1. Mail Register.—A business register is kept of every piece of mail received, its distribution and disposition.

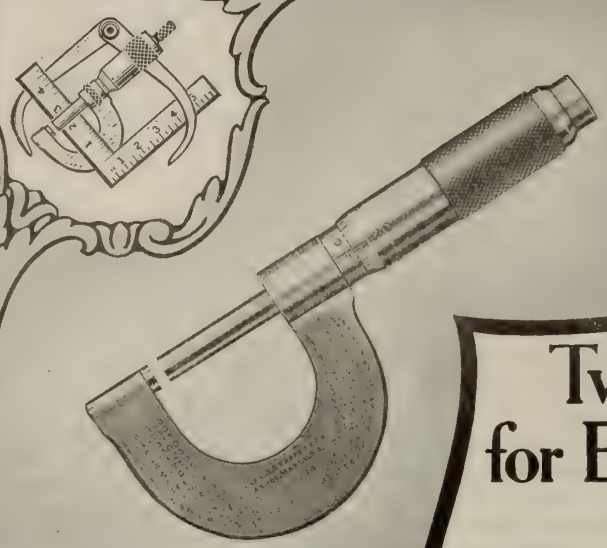
In this way a check is maintained on the attention and promptness of department managers, or whoever attends to answering correspondence. As this register is numbered consecutively, nothing can be overlooked.

2. Department Mail.—Customers frequently write letters which refer to several departments. As this correspondence is received, each department paragraph should be stamped by a rubber stamp with a symbol letter, indicating the department through which it passes from one department to another for attention, and, if not so transferred, the blame can be placed where it belongs. Carbon copies may be made on different colored paper to facilitate departmental reference to correspondence files.

3. Correspondence Filed.—No correspondence should be taken from files except on signed requisitions, so that, if correspondence is not in the folder, the requisition will show its location.

4. Vertical Files are recommended as convenient for all sizes and purposes.

5. Correspondence Dictation. — Much time is saved by designating each letter dictated by number, the stenographer obtaining name and address from letter answered. This plan prevents a multitude of mistakes.



6. Correspondence Improvements. — The correspondence clerk should be trained to use the simplest, as well as the most effective language possible, to acquire a recognizable and pleasant personality, to avoid persiflage in ordinary business communications—paying greatest attention to the most essential points, so as to follow the well-known traditions of the house.

7. Carbon Copies should be made of all answers to letters, the same being attached to the correspondence answered, and both filed away together. Therefore, when reference is made to a letter, the answer is found in one operation.

8. Economy.—Concerns having several departments will do well to provide the mailing clerk with envelopes to those persons with whom the firm are constantly in correspondence, so that at the end of the day the different departments' mail can go in one envelope, thus saving postage.

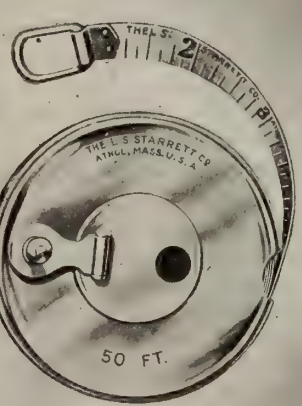
Mr. Trout is now installing systems in some large manufacturing plants, and is about to start teaching his system of correspondence procedure in one of the colleges of Philadelphia.

Herewith is illustrated a system put in at the office of Keystone Lubricating

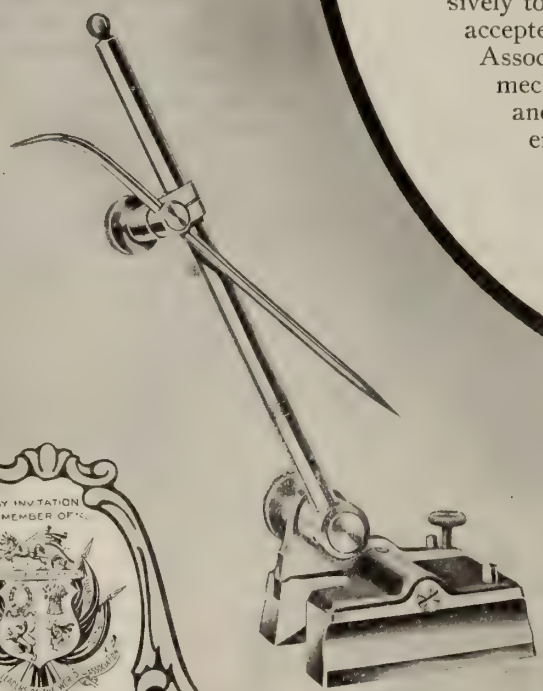
Two Important Things for Every Hardware Retailer to Know

Nothing is really important in our business unless it has an immediate or ultimate cash value.

As a hardware retailer **you** are interested in those things which help you make money.

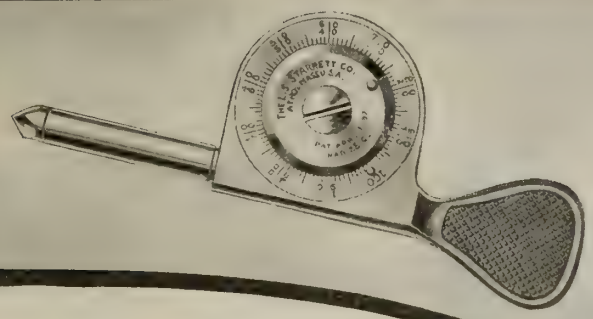


As manufacturers **we** are interested in having you sell our products. We want to show you, therefore, that when you do business with us, there are two factors that are important to you on a purely business basis. First, comes our product—

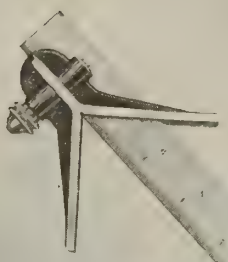


Starrett Tools

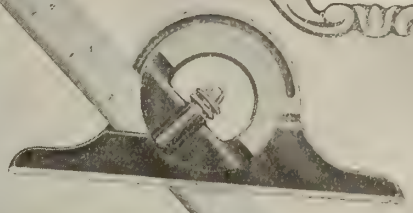
These tools we have honestly tried to make the finest mechanical tools in the world. How well we have succeeded may be judged from the fact that we now have the largest plant in the world devoted exclusively to the production of fine mechanical tools; and we have been accepted as leaders in our line by the Rice Leaders of the World Association. The name *"Starrett"* on a tool is accepted by all mechanics as an absolute guarantee of accuracy, workmanship and service. Our tools may be sold to machinists, carpenters, engineers, electricians, draftsmen, and to all men who love to work with fine tools.

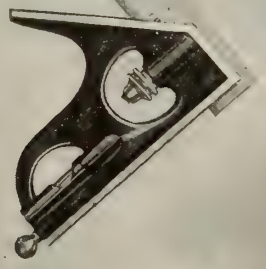


Our line includes such fine tools as steel rules, squares, levels, steel tapes, protractors, combination sets, micrometers, calipers, dividers, speed indicators, surface gages, depth gages, thickness gages, caliper squares, etc.; and also hack saws, socket wrenches, pliers, cabinet scrapers, nail sets, etc.

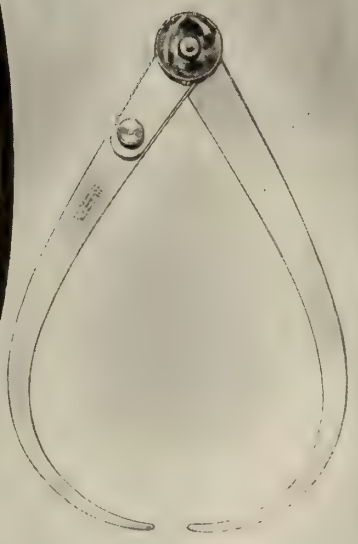


These are all shown in our 320-page catalog 20-M-A, which describes 2100 styles and sizes of Starrett Tools.





STARRETT
HACK SAWS
CUT QUICKER
LAST LONGER



The second important factor in your dealings with The L. S. Starrett Co. is the help we give you in selling our tools.

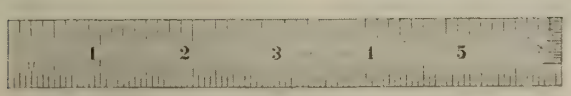
We realize that you can sell tools only to men who want them, so we teach mechanics and amateur craftsmen why they need Starrett Tools.

This we accomplish by advertising in technical papers and in National popular magazines, by street car advertising, by window displays, etc. Our big 320-page catalog is sent in answer to every inquiry; and in this manner we distribute thousands of copies every year. Every time we receive an inquiry we send the nearest dealer a card informing him of the name of the inquirer and we also send the inquirer a card with the nearest dealer's address. All of our advertising tells the mechanic to go to his hardware store to buy Starrett Tools.

We maintain New York and Chicago offices which facilitate distribution and save freight for dealers, while our salesmen in the various territories are always ready to render any personal service. This dealer aid all comes under the head of

Starrett Service

It has always been our aim to make this service superior, and we know it is appreciated because dealers are continually writing for catalogs, booklets and literature to distribute, and for electros, street car signs, etc., for their local advertising. Furthermore, they tell our salesmen that they appreciate receiving the post cards informing them of likely customers, and they say that they like to do business with The L. S. Starrett Co. because "they are alive and hustling."



If there is anything you want to know about Starrett Tools or Starrett Service write to us now.

We Are Always On the Job. 42-344.

The L. S. Starrett Co., Athol, Mass.

World's Greatest Toolmakers

New York London Chicago

BY INVITATION MEMBER OF
NEW YORK U.S.A.

Co., Philadelphia, which is without doubt the best and simplest system of filing orders ever used by any large manufacturing company—where they handle 600 odd orders a day. Each drawer here represents a state and is subdivided with movable partitions into counties. In each county space he simply places folders—A to Z, each customer's order being placed alphabetically in such folder, as stands for his name, so file clerk can simply go to drawer representing state, look for John Doe in County Section D-folder and find his customer's order at once. Not necessary to look up card index or hunt over maps.

Handles 600 Orders Daily—A Drawer for Each State.

One of the great advantages of the system is the doing away with rod and carrier block, as all letters, folders, guides, etc., stand in a vertical position and cannot get misplaced or fall over on one another as is usually the case in vertical filing.

For classifying or filing correspondence in the stationery business, we re-

Symbol	To be used for Subjects Relating to	Correspondence to be Filed.
E	Employees	Alphabetically by names of employees. When more than one name is mentioned in a piece of correspondence, enough copies should be made to cover each employee mentioned. When correspondence mentions no name, but simply deals with title, file alphabetically by title.
G	Gas Mains: G-L Laying ..... G-X Miscellaneous.	By Method 1. (See below.)
K	Complaints: About lamps, breakage, outs, defective leaks and repairs....	Alphabetically by name of person making complaint. When answer to letter is made, file it with complaint.

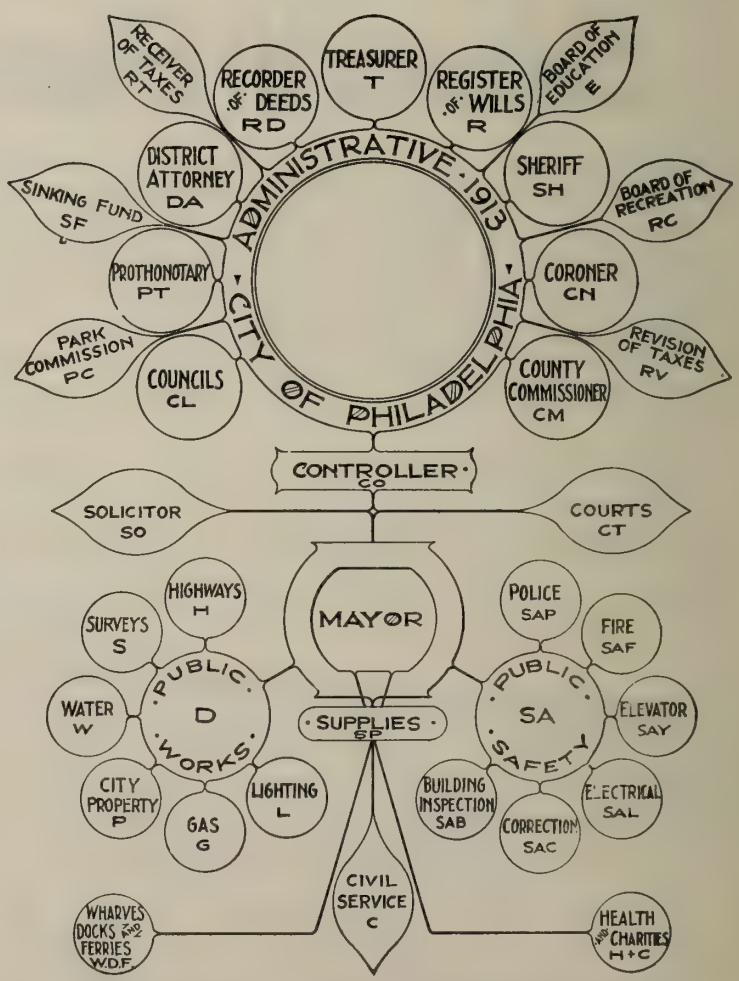

Figure 2.

An Opportunity for the Hardwareman

Big Business in Small Items of Household Goods

WHAT are you doing to secure the women's trade? Have you ever stopped to figure out what percentage of the women's trade in household hardware in your vicinity is coming to your store? If you have not, I think I am safe in assuming that you are neglecting an opportunity which if developed would help swell the profits of your business to a considerable extent.

I visited a large departmental store in Toronto one day last week, and as I walked through the basement I noticed a number of women around one of the display tables. As I approached the table I noticed it was loaded with articles priced at 10 cents each. A large showcard hanging above the table bore the following: "Your choice of any article on the table for 10 cents." There were probably twenty-five or thirty different lines of goods shown on the table, and with two or three exceptions all were lines that are carried in the average hardware store. One woman picked out six articles at 10 cents each. Other women selected various numbers of articles. I think I am quite safe in saying the sales from that table would run $10 per hour during the busy time.

As I watched the women flock around the table and pick out soap shakers, tack claws, can openers, garment hangers, tack hammers, carpet stretchers, door springs, garden trowels, canvas gloves, egg beaters, paint brushes, mouse traps, drawer knobs, chair seats, and many other 10-cent articles, I thought of the splendid opportunity which presented itself to the hardwareman who was willing to take advantage of it. The table in the department store was selling the goods without the aid of a saleslady; the latter was simply wrapping up the goods and taking the money. Why could not the same plan be worked out in a hardware store? It can be worked out, because several hardware firms are now featuring the small household lines on special tables and are making a success of the scheme.

There are some merchants who scoff at the idea of having 10-cent tables in their store, but just here it might be a good plan to remind them that the F. W. Woolworth Co., in its 680 odd stores where the price is limited to 10 cents, sold in the year 1913 goods to the extent of $66,228,072. Too many merchants are inclined to allow the small articles to remain in their original packages, and only open them when customers ask for the goods.

It is true that in many stores there is not much room to spare for tables, but very often by rearranging the stock extra display space may be obtained. The small household specialties carry a good profit even though the individual sales are sometimes small, but the merchant should not look altogether at the profits secured on the small articles. He should start out in an endeavor to secure the women's trade. If you secure their trade in the small articles for household use, you will soon find they will place their order with you for other lines. Cultivate the women's trade. Display lines of goods in which the women are peculiarly interested, and the chances are you will soon find that your sales and profits are on the up-grade.

DEMONSTRATIONS IN THE STORE.

DURING recent years there has been a tendency on the part of many manufacturers to send demonstrators, or to supply retailers with the necessary equipment to provide demonstrations in the store for the purpose of getting the public interested in various lines. Paint, stove, electric equipment, vacuum cleaner, and other manufacturers have been following up the plan to a great extent.

One week recently demonstrations of Lacqueret were put on in a number of stores in Toronto. The demonstrations were so arranged that each section of the city received at least one demonstration during the week. In order to get the views of retailers regarding the demonstrations of various lines, Hardware and Metal interviewed a number of merchants in their stores and the following opinions were offered:

W. H. Lake, 608 Queen St. W.—"We are only too pleased to say a good word for demonstrations in general. Demonstrators pull our sales up without adding to our expense or work as manufacturers often furnish demonstrators and incidentally, the circulars, thus relieving my sons and I of all worry. I find that manufacturers are usually only too pleased to help the retailers push their goods. It stands them in hand to do it and works out to the common advantage. During a recent demonstration we used one window to great advantage and actually had such a crowd watching the demonstrator at work and incidentally dropping inside to buy, that we called her out of the window, fearful of attracting unfavorable police attention. We demonstrate so many lines that we are careful not to become so abonxious as obstructors of the highway as to be forbidden to hold future performances.

The beauty of selling demonstrated goods is that however small the first purchase is, it invariably leads to others immediately."

C. G. Bailey, 1958 Queen St. E.—"I believe thoroughly in demonstrations as an aid to increased sales; for I find that the latter invariably rise in response to them. I have known people to come into my store for an article, another brand of which was being demonstrated at the time, and instead of buying what they had intended, they purchase the demonstrated brand. The illustration merely goes to show that the unadvertised article will be on the shelves, while its mate that is no better will sell through the force of the demonstration. I have found that a little touch may be added on such occasions by the distribution of small premiums, etc."

H. B. Christie, of Christie Bros., 1824 Dundas St.: "We have been devotees of the demonstration form of advertising for some time. We believe in circularzing the district thoroughly previous to the holding of demonstrations and also playing up our windows strongly. I believe that demonstrations should be arranged for the days on which the largest crowd is liable to be in the vicinity of the store."

George Garrett, 582 College St., said: "We recently held a demonstration of a paint line which I think was a success. to bring about that end. The manufacturers furnished us with circulars which we carefully distributed to our trade beforehand so that on the big day we had a good attendance. The manufacturers demonstrator, a young lady, who knew her business, was on the job all day. She hobnobbed with every customer who came in, politely asked them for a minute of their time and then proceeded to show her goods and the purposes to which they could be put. In the afternoon, one of the manufacturers' travelers devoted his time to the same purpose. The sales were good that day, but the best results were noticeable during the next few days, by which time no doubt the news had percolated by word of mouth, from one housewife to another. Although almost two weeks have elapsed since then, increased sales are still the order of the day, I can only repeat that I am strong for such demonstiations as an aid to sales."

J. A. Buyers, Mgr., Parkdale Furnace & Hardware Co., 1378 Queen St. W.:—"We find demonstrations of value at all times but particularly so in the introduction of a new line. I think the best days for demonstration are the average days; not on an ordinarily busy day like

(Continued on page 57.)

Problems in Sheet Metal Work

By E. Bronson.

IN the problems which we show here we have a bullhead or shoe for a stack pipe as in Fig. 1, and in the other, Fig. 2, a fitting which changes the width of the pipe at top to right angles with the bottom, as noted by the perspective drawing.

The article shown in Fig. 1, while not an intricate problem, is a very handy one. As in most all bullheads the round pipe is kept on the same plane as the square pipe, it always requires an elbow to carry the pipe to furnace, thus reducing the slope or elevation of the pipe. In using an article as shown here, the pipe can be kept up closer to the ceiling, and at most will require but an angle elbow between it and the furnace, thus increasing the elevation of the pipe and incidentally the headroom. This is of special advantage where the cellar ceiling is low. The article shown in Fig. 2, while not very often used, will in some instances prove of great value, as it is sometimes required in running up a stack to change the center line or face of pipe at right angles, the upper partition or position of the register in some few instances requiring this.

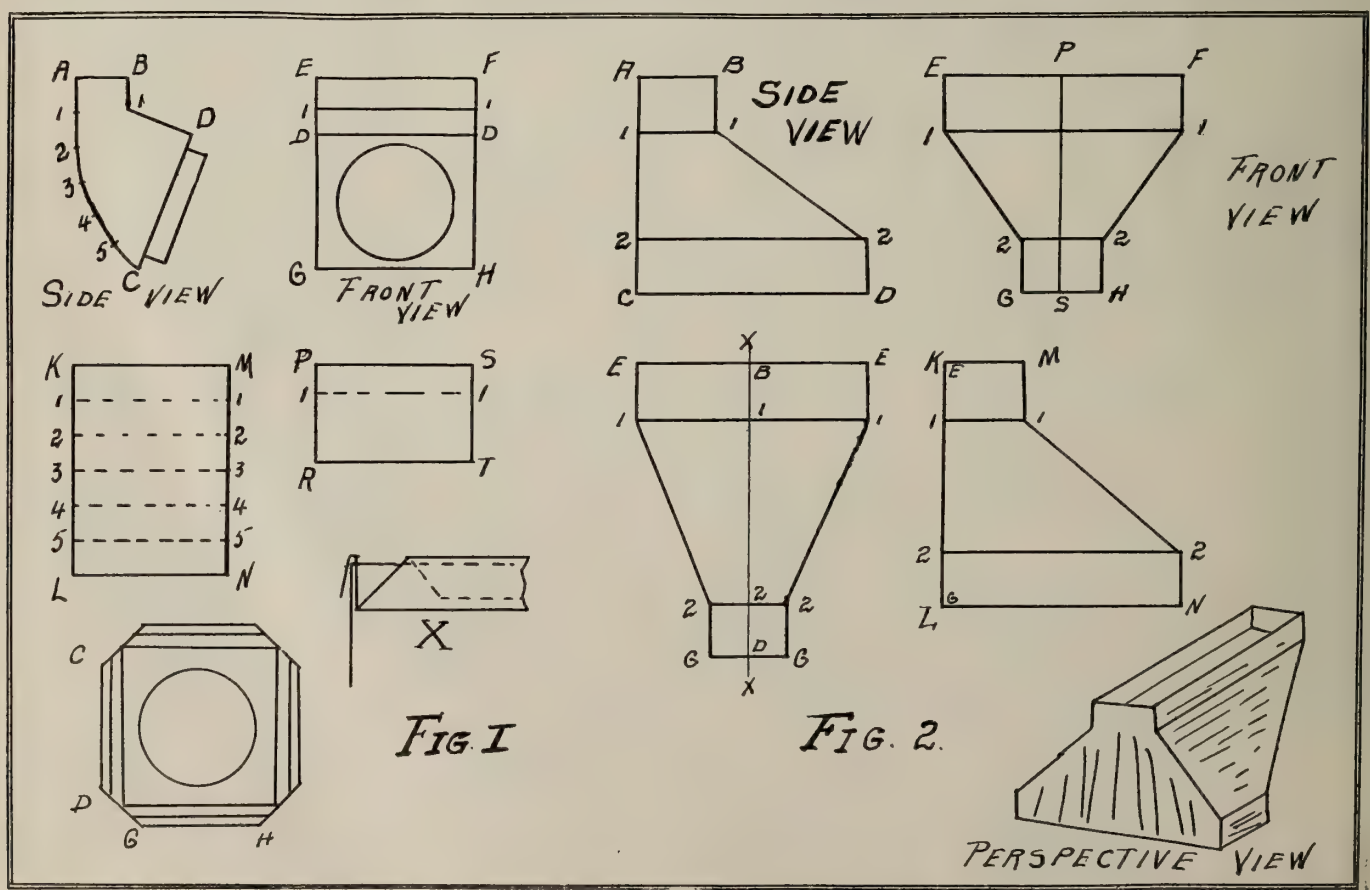
To develop the patterns of bullhead shown in Fig. 1, it is necessary to have a side elevation of the required article. In drawing this, the angle can be drawn as will be thought best for general use. In Fig. 1, let A B C D be the side elevation and E F G H a front view. As the piece is the same width at top and bottom—viz., E F and G H—the side view as outlined by A B C D is the pattern of the two sides or ends. The next step will be to obtain the patterns of back and front pieces as on lines A C and B D. To obtain pattern on line A C, first divide distance from A to C with a number of equal parts, as shown by A 1 2 3 4 5 C. Draw two lines as K L and M N a distance apart equal to E F or G H—that is the width of the pipe. Square with K L, draw a line, connecting K L and M N, as K M. From K and M mark off on K L and M N the length of line A to C on side view as shown by A 1 2 3 4 5 C, draw a line connecting the two points as shown by L N, completing patterns on line A C.

To obtain pattern on line B D draw two lines as P R and S T a distance apart equal to the width as at E, F or G H. Draw a line at right angles to P R, connecting it to S T. From P and S mark off the distance B-1 on side view and from the point 1 when obtained, mark off the distance 1—D on side view, connect the points thus obtained as at R T, thus completing pattern on line B—D.

The end to which round pipe collar is attached is a square having two of its sides equal to C—D in side view and the other two sides equal to G H in front view as shown by C—D and G—H. Outside these lines are marked the laps required to attach end to body of bullhead. When putting together as shown the laps are cut off on a good angle at the corners, and are then formed as shown at X. When the end is slipped on body, it leaves the corners of body clear of the laps on the bottom. These are then turned in with pein end of the hammer, thus holding bottom on securely.

To obtain patterns of piece shown in Fig. 2 it is first necessary to draw the side view and a front view. In this case let A B C D be the side view and E F G H the front view. As the back of side, as on line A C, is straight, it follows that the front view, E F G H, is outline of pattern required for the back as shown on line A C. To obtain pattern on line B—D draw a line as X—X

(Continued on next page.)



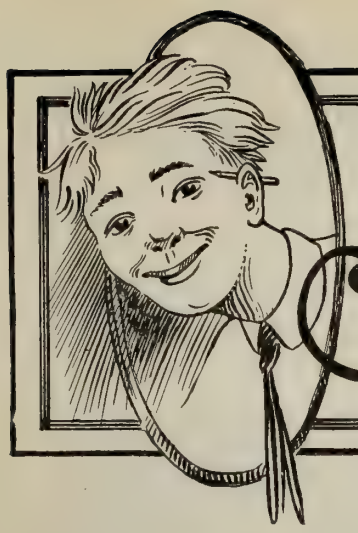


FIG. 1

FIG. 2.

THE JUNIOR CLERK'S PAGE

Give the Junior Clerk a Chance

A Plea for the Junior by an Eastern Ontario Clerk.

IT is sad to relate, but none the less true, that there are a great many hardware merchants who fail to recognize and appreciate the good qualities which their junior clerks or messengers sometimes possess.

As a rule, it will be found that the most notable successes in business have started at the bottom of the ladder, and it stands to reason that it must be so, for when a man comes to a position of responsibility in an institution after rising step after step from the bottom, he is better adapted to cope with the problems which those under him come across, and consequently more likely to earn their respect and goodwill.

Because a person starts at the beginning is no reason why he should be kept at the beginning, unless he is unfitted through laziness or lack of brains to advance. When a boy undertakes to learn the hardware business, he usually starts delivering and doing the chores around the place. He is given perhaps three or four dollars a week to start on, and as a rule is left on that salary until he asks for more. Sometimes he gets it; more often he does not get it.

From the manager's point of view, perhaps a delivery boy is not worth more than three or four dollars a week. Perhaps he is right, but when a boy has been around a store three months or more he is not only capable of delivering parcels and sweeping the floor, but should be able to do a certain amount of work, such as wrapping up parcels, keeping track of the surplus stock in the warehouse, and many other things which he was not able to do when he started. But when he is refused the advance he asks for, he will probably quit and accept some other position where the wages are higher, but the chances of advancement probably lower.

When this happens another boy is obtained, probably after several days of inconvenience, and the same thing happens over again. On the other hand, suppose you had advanced your first lad when he asked it. Fifty cents or a dollar would be sufficient to hold him for several months more, at the end of which time he would begin to be a real help in the store, while a new lad would be just finding his bearings and trying to decide with himself whether he liked his position well enough to stay or not.

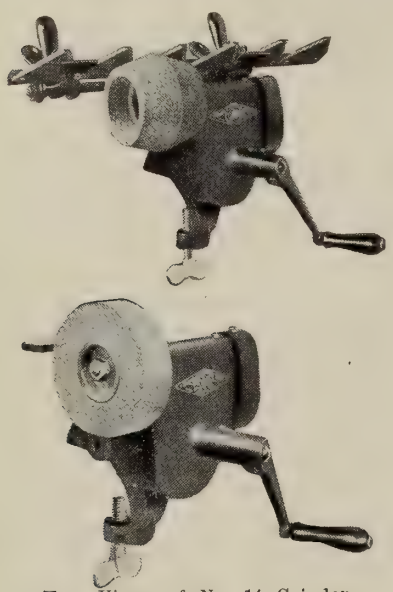
It can hardly be expected, of course, that a boy be advanced when he is absolutely not worth it; but if he is able to hold his position for several months, or until he feels justified in asking for an advance in salary, then depend upon it he wants to stay, and will make himself worth while.

A few months will show whether or not a boy is going to be satisfactory, but it will take more than a few months to bring out all his good points if he is satisfactory. Usually more is expected of a junior than of any other member of the staff, because he is watched more closely to guard against his making serious mistakes. He is expected to have an accurate memory, to be clean and orderly in his person and habits, to be courteous, to be good at figures, to be a lot of things that it takes time and practice to become, and if he is not, then he suffers accordingly, by being told about it, and the mind of a lad is extremely sensitive, and he must be handled carefully to show up to his best advantage.

It makes a great deal of difference what kind of a man is placed over a boy, and the writer has in mind at this minute several instances where junior clerks have been put down as failures in the store they started in, but after a change of proprietors have shown really remarkable evidence of business judgment and management. In most cases too much is expected of them. You will often find the head salesman of a store who is a decided failure when he comes to buying, and a manager who is a very poor salesman, and a young boy fresh from school must be shown why his failings make a difference in the store, and not frightened out of his wits by a senseless calling down which does no more than discourage him, and leaves him as much in ignorance of the reason for his error as he ever was.

PROBLEMS IN SHEET METAL WORK.

(Continued from page 54.)



on this line; mark off the distances B—1 1—2 and 2—D on line B—D of side view; draw lines from these points on line X—X and square from it on both sides. Divide front side in equal parts as shown by line P—S. From this line measure the distance to E or F and mark same on line B drawn from line X—X. As the distance from line P—S is same at E and F and at 1 and 2, mark same distance again on line 1 on both sides of line X—X. Measure from line P—S to point 2; in this case point G and H correspond to point 2. Mark off this distance from X—X on lines 2 and D; connect the points and complete outline of pattern of front as shown by B—D of side view.

To obtain pattern of the two sides, in this case both sides are alike. Draw a line as K—L. On this line mark off distances E to 1, 1—2, and 2 to G of front view; from these points on K—L draw lines at right angles, extending them out at least the width of pipe. Measure the distance from A to B and 1 to 1 on side view—in this case they correspond—and mark out from line K—L on lines K—M and 1—1; measure distance 2—2 and C—D on side view and mark off from K—L on lines 2—2 and L to N as shown. Connect points, completing outline of pattern of side.

New Goods Offered Canadian Hardwaremen

NO. 14 GRINDER.

The Carborundum Co. Niagara Falls, N.Y., has placed on the market a new grinder known as the hand power mower section and tool grinder No. 14, and it is one great little machine for the

Two Views of No. 14 Grinder.

farmers' use. It is compact, smooth running, and is built for service. The gears are of the spiral cut type, made from the best possible material and positively accurate. The castings or body of the machine is strong and durable and the casting sections are ground to a fit, thus assuring an oil proof, dust proof machine.

One of the several features of the machine is the handle, which is set at an agle to the body of the grinder, thus allowing for a clearance of the hand in grinding mower section knives. The machine is geared to give high speed with the least possible effort.

For the grinding of the mower sections the grinder is equipped with a special holding device and a special double-beveled carborundum wheel. The grinder can be carried right into the field and lamped quickly and easily to the wheel of a mowing machine and grind the section knives right on the job.

The machine is just as efficient, just as handy for the farmer's work bench, for tool grinding and general work. For these purposes it is fitted with a tool rest and a regular carborundum tool-grinding wheel.

THE TORRINGTON TANDEM.

The newest product of the National Sweeper Co., Torrington, Conn., is the Torrington Tandem combination machine here illustrated. The tandem is said to consist simply of a light-weight straight vacuum cleaner, with a carpet sweeper firmly clamped to it and yet easily removable as a trailer. This combination is said to be the outgrowth of an urgent demand for combination machines and the further fact that in "built-together" machines too many essentials of simple durable construction are sacrificed.

In the literature being sent to the trade on the new "Tandems" the manufacturer states that running a "built-together" combination every day with twice the labor when only a carpet sweeper is wanted for at least half the days of the week, is not very practical and that in addition to the ease of separating the "Tandem" into two still more easily operated and efficient individual machines, the "Tandem" itself run in combination appeals because it is simply constructed, does more efficient work; and runs as easily in tandem as any good combination.

This addition to the "Torrington" family brings the line up to an array of

Two views of the "Tandem" combination machine. The upper cut shows how the connection is made.

devices for cleaning floor coverings consisting of seventeen models of carpet sweepers, two types of straight vacuum cleaners, two "Combinations" and two "Tandems."

The combination that we illustrate is called the "No Dust Twins" tandem.

"BENJAMIN" TOOL SET NO. 3.

The Benjamin-Sellar Mfg. Company, 557-559 West Quincy street, Chicago, has added to its tools sets No. 1 and No. 2, a larger assortment of tools called No. 3.

Six tools consisting of 2 gimlets, 2 awls, a flat countersink and a tapered reamer, have been added, these with the friction drive handle, and five screw driver blades are put up in a handy Khaki tool set roll.

The friction drive handle is especially adapted for all rotary work. The friction cap prevents the blistering of the hand, and the tool steel spring chuck

Benjamin Friction Drive Tool Set.

enables any style of tool to be instantly fastened in the handle.

Each tool is a mechanic's tool, made of high grade steel, perfectly tempered and carefully ground ready for use.

ROUND POCKET STONES.

The Carborundum Co., Niagara Falls, N.Y., are now offering the trade the No. 150 round carborundum pocket stone here illustrated. The stone is 2 inches in diameter and ¼ inch thick. It is made in the medium fine grit, and, of course, has all of the fast-cutting qualities of other carborundum stones. The size and shape of the little stone make it convenient to carry in the pocket, to have on the desk or about the house for sharpening pen, ink and manicure

Round Pocket Stone.

knives and small toils. The stone can be used wet or dry.

RECORD OF CANADIAN CADETS.

Advices from the old country have just been received to the effect that at the Imperial Cadet rifle meeting, which was held in London last week, the Canadian Cadets, using the Ross Cadet rifle, won all the competitions with the single exception of the "Clementine Fessenden Cup."

The individual championship was won by MacWilliams, of Calgary.

Current News of the Hardware Trade

New Firms.

Benson, Sask.—J. A. Honan has commenced a hardware business.

Moose Jaw, Sask.—The Western Sales Co., hardware jobbers, have commenced business.

Business Changes.

Prussia, Sask.—M. Krinke has been succeeded in his hardware business by Gryde & Marshall.

Toronto, Ont.— Robertson Hardware and Lumber Co. have sold their hardware business to John Gillespie.

Toronto.—The Excelsior Plate Glass, Limited, of Toronto, has arranged to take over the Forest City Glass Company, on Fullerton street, and will start work in London immediately.

Opens Canadian Factory.

The American Metal Polish Co., manufacturers of Putz cream metal polish and Silva Putz silver polish, has established a modern Canadian factory in Montreal to provide for their Canadian business. The opening of the Canadian plant has resulted in a revision of prices for the Canadian market.

B. A. Burke, general manager, and J. M. Allstaetter, representative of the American Metal Polish Co., West Somerville, Mass., are in Montreal in connection with the opening of a Canadian factory in Montreal west, for the manufacture of their products.

Western Notes.

The Tuttle and Bailey Mfg. Co. of Canada, Ltd., makers of registers, ventilators, grilles and screens, branch of a well-known American firm, have broken ground on a new plant at Bridgeburg, Ont., and have opened a branch office and warehouse at 126 Lombard St., Winnipeg, Man., where a large stock will be carried. This firm has not been long in the Western field.

O. B. Manville, of the Manville Hardware Co., Prince Albert, Sask., passed through Winnipeg recently on his way to Montreal, thence to sail for England, where he has not been for thirty years. He will be away for three months, returning in the fall.

Sydney Smart, Melfort, Sask., was in Winnipeg on business recently.

The Manville Hardware Co., Prince Albert, Sask., have purchased a 2-ton motor-truck, and have disposed of all their horses. They find that they can make better time at less expense this way.

Merchants Organize.

Brampton.—Merchants of Brampton are organizing a branch of the Dominion Retail Merchants' Association. Following officers have been elected: President, T. H. Shields; first vice-president, W. A. Robinson; second vice-president, D. J. Kilpatrick; secretary-treasurer, J. S. Beck; treasurer, W. Higgins.

Vernon, B.C.—A convention of the retail business men of the Okanagan Valley was held here on the 9th of June. Matters of importance pertaining to the welfare of retailers were discussed, and

W. L. Helliwell, Vice-President and Manager Gurney North-West Foundry Co., Winnipeg recently elected to Board of Directors of Canadian Credit Men's Association, Winnipeg.

addresses from the officers of the Retail Merchants' Association of British Columbia, that outlined the aims of that body, were listened to.

The business matters were all attended to in the course of the afternoon, whilst the evening was occupied by a reception that was tendered the visiting officers and business men.

Personals.

Watson-Jake Koep, of the hardware firm of Wachaltz & Koep, has returned home from a trip through Minnesota.

W. H. Newton, sales manager of the Canada Paint Co., Montreal, was in St. St. John and Halifax last week calling on the trade.

H. M. McCarthy, representing Collect-O-Dust Co., Ottawa, manufacturers of a new sweeping powder, was in Montreal this week.

W. E. Morris, of Boss Manufacturing Co., of New York; Clark B. French, of James Lowe Erskine Co., New York; M. Lafontaine, of Simonds Canada Saw Co., Ltd.; and W. E. Culley, of Simonds Manufacturing Co., Fitchburg, Mass., were calling on the trade in Montreal this week.

GUELPH CLERKS BRANCHING OUT.

(Continued from page 41.)

in stores and manufacturing plants, and where the absence of it was meaning inefficient service, leaks in the business and loss of custom. A vote of thanks was tendered Mr. Huston for his talk.

It was decided that further meetings of a similar character would be held in future and a vote of thanks was tendered the officers for arranging it. The decision was also reached to run an excursion on one of the Thursday half holidays during July or August. This will be anounced later.

DEMONSTRATIONS IN THE STORE.

(Continued from page 53.)

Saturday for instance, when we are always busy attending to the regular Saturday trade, nor on the other hand, on a slack day, such as after a holiday, when the trouble and expenditure attendant upon the occasion is not so likely to pay for itself. I believe in striking the happy medium for best results."

PROPER HANDLING AND FILING.

(Continued from page 52.)

commend symbol filing, similar to that used by City of Philadelphia or John Wanamaker. For instance, place your letters in folders, marked A to Z, the alphabet letter standing for name of writer. Then use a guide board tabbed O for orders, I for inquiry, E for estimates, B for bills, S for shipments, etc., as necessary in classification, according to business. These guides are placed in different sections in divided drawers, each followed by the A to Z folders. If you should get an order from John Smith file it after O-guide in folder S, or if you gave an estimate to John Brown you simply go to file see guide E and look at folder B.

Anyone with good business judgment can arrange your files and find your letters, orders, etc.

In selling folders and guides to go with vertical files, your salesman will have no trouble describing this simple system, and it should help you sales on vertical filing devices.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS A GLANCE.

Very little change in general conditions has taken place during the past week, although a number of price changes have been reported. Gasoline and benzine have declined at Toronto and Montreal. Nails have advanced as predicted at Montreal. Linseed oil appears firmer on account of the advance in the price of flaxseed, although orders for oil are not heavy and price-cutting is evident in some sections. Turpentine and resin have advanced at Toronto, following the recent firmness in the south. London, Ont. reports changes in the price of brushes and O & A wire. A carpenters' strike at London, Ont. has affected business in some lines. The metal markets are still quiet and weak. Collections are fair and there is a good seasonable demand for summer goods.

MONTREAL.

MONTREAL, June 11.—Trade has been quite active during the last week, and the outlook seems promising. Repeat orders are coming in freely for seasonable lines, and with the fine weather now prevailing a continuance of the present conditions is likely. Collections show a slight improvement. The metal markets are still very weak, with the exception of lead, which has advanced again.

Builders' Hardware.

There is considerable activity in building circles at present, despite the labor troubles that contractors are experiencing. Considerable construction work is being done in concrete, and this has led to a good movement in cement. Lock sets, in the cheaper grades, have been in quite active demand.

Fly Time Supplies.

There has been a good demand lately for fly pads, fly paper, swatters, etc., and wire cloth and window screens. The fine weather and the educational work done during the "clean-up" campaign recently has evidently had the effect of stimulating interest in these lines.

Lawn Goods.

Sales of garden hose, garden rollers, sprinklers, etc., have been quite a feature of trade during the last few weeks. There has also been considerable business done in ornamental garden fences. These are being largely used now for both front and back of houses.

Nails and Screws.

As forecasted in last week's report, wire nails have advanced. The quotation is now $2.25 base, Montreal, which is 5c above the previous quotation. The market is firm at this figure. The quotation on cut nails is still $2.50 base, Montreal. Screws are unchanged at the prices quoted in the current market list.

Bar Iron.

No change has taken place in the quotation on bar iron, which is still offered at $2 to $2.05 base, Montreal.

Metals.

With the exception of lead, all the metal markets are very weak. This condition has continued for several weeks now, and there does not appear to be any immediate prospect of a change. Owing to a local scarcity, very largely, lead has advanced from $5.10 to $5.25. Tin is quoted at 40 to 41½c; antimony, $8.50; spelter, $6, and copper, $16. Ingot brass, red, is 14c lb.; ingot brass, yellow, 13c lb.; tinkers' bar solder is 28c; wire solder, 25½c; half-and-half, 24½c, and wiping solder, 20 to 30c.

Lead and Lead Waste Pipe.

There has been no change in quotations for lead and lead waste pipe. The former is selling at 7½c and the latter for 9c, with discounts of 7½ per cent.

Rope, Twine, etc.

An active demand continues for cordage lines, and prices have not changed since last report. Quotations are: Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are: Best Manila, 650 feet to pound, 13½c; Manila, 600 ft., 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

Outing Requisites.

As the warm weather season advances there is a better demand for camping and sporting goods, and these lines are being featured in most retail stores just now.

Stoves, etc.

Though most lines of stoves are not considered among the active list at this time, there has nevertheless been a fairly good volume of trade in this department, especially for gas and oil stoves.

TORONTO.

TORONTO, June 11.—Conditions here have not changed materially during the past week. Paints and other seasonable goods are naturally the best sellers still. Cordage demand is not quite as strong. Poultry netting is one of the lines showing least activity. Collections on the whole are fair. Dealers generally, however, are prepared for a gradual slackening in business until the crops are harvested, now that the best of the spring rush is over.

Nails, Screws and Rivets.

Nails are unchanged at $2.25 base. The demand for them at this price is not active on account of the fact that dealers loaded up in anticipation of the late 15c advance, and in consequence are more or less independent of the market for the time being. Cut nails are as quoted in the current market quotations.

The demand for screws and rivets is much better than that in nails. Both remain unchanged.

The late advance in copper rivets and burrs put them at the present price of 25 per cent and 12½ off.

Builders' Hardware.

Builders' hardware is in considerable demand in Toronto, and shows no sign of falling off. A large number of small houses are noticed in course of construction in the newer suburban districts, to say nothing of a fair number of office buildings, etc., that have been in process of construction for some time past.

Rope, Twine, etc.

Business in cordage is quite satisfactory. The purchases are mostly small, indicating conservatism, but they are of frequent occurrence. Some lines have suffered from over much previous buying, as Manila, for instance, the base price of which went from 10½ to 17c in 1913. Buyers were prepared for the rise, and bought heavily at the low price, so that they are not yet taking much at 15c. The binder twine sales should hold up well until the middle of July.

Stoves, etc.

Summer stoves remain one of the best selling lines. Oil and gas burners are still in the lead in popularity, and sales in those lines are astonishingly good. The coming of summer, doing away with the heating use of coal and the cheapness of oil as against gasoline appear to be the determining factors in the demand.

Summer Goods.

The seasonal goods in general are the leaders in sales. In addition to some classes of stoves, paints, etc., refrigerators, ice cream freezers, wringers, screen windows, lawn mowers and garden tools, are helping to swell the list.

LONDON.

LONDON, Ont., June 11.—Owing to a carpenters' strike in this city some lines of builders' hardware and tools are not selling as fast as they should at this season of the year. Summer goods of all kinds are big sellers now and business is brisk with the retail trade.

Advance in Brushes.

There has been an advance of 10 per cent. in the price of whitewash, kalsomine and household brushes.

O. & A. Wire.

The special 5 per cent. on O. & A. wire has been discontinued and the following prices are now quoted:

O. & A. wire is $2.20 base, making the following net prices for certain sizes:—No. 10, $2.36 per 100 lbs.; No. 11, $2.42 per 100 lbs; No. 12, $2.50 per 100 lbs.

Nails, Screens, Etc.

Wire nails are quoted at $2.25 base; cut nails at $2.70 base.

Screws are still quoted as follows:—Flat head, bright, 85, 10,, 7½, 10 and 10 per cent.; round head, bright, 80, 10, 7½, 10 and 10 per cent.; flat head, brass, 75, 10, 7½ and 10 per cent.; round head, brass, 70, 10 7½ and 10 per cent.

Oils, Paints, Etc.

No change has taken place in the price of linseed oil. The following quotations are still in effect:

Raw—

1 to 2 bbls. .....63c per Imp. gal.
3 to 5 bbls. .....62c per Imp. gal.
6 to 9 bbls. .....61c per Imp. gal.

Boiled—

1 to 2 bbls. .....66c per Imp. gal.
3 to 5 bbls. .....65c per Imp. gal.
6 to 9 bbls. .....64c per Imp. gal.

Less barrels, add 7 cents gallon.
5-gal. jacketed oil cans, 50 cents each.
1-gal. jacketed oil cans, 25 cents each.

BUSINESS IN MARITIME PROVINCES.

The St. John, N.B., Board of Trade News Letter, recently issued, says: General business conditions in the Maritime Provinces, considering the depression of the past year, are in a fairly healthy state. This is as much due to the prudent conservatism of the people themselves as to the exercise of careful management on the part of the banks. Notwithstanding that the banks found it necessary to curtail their business last year, the value of their transactions showed a very substantial increase during 1913. This is particularly true so far as St. John is concerned. This year the industrial situation does not show a great deal of activity. Many industrial plants are running on short time, and there is a diminution in general trade, which will probably lead to reduced profits for the banks this year. Real estate values remain firm, and very few sales are being made except for purely utility purposes. There is considerable house-building going on throughout the city, the building permits issued during May showing an appreciable increase over the same month in 1913. This, with the extensive harbor works, furnishes considerable employment, so that the pinch of hard times is being felt very little in the city. Throughout the province farming is fairly well advanced, and a good crop is anticipated.

Many engineering works of considerable magnitude are projected in New Brunswick just now. At St. John, many hundreds of men are employed in the harbor development enterprise on the east and west sides of the harbor.

DONT'S FOR CLERKS.

Don't be too familiar in endeavoring to be sociable to a customer.

Don't say you "don't know," but that you will "find out."

Don't think that because the boss sits in a private office now that he has never stood behind a counter.

Don't imagine that because your errors are mentioned that your hits are not scored up.

Don't think that you are the only one who has the interests of the store at heart. There are others.

Don't think any task too humble or any person too lowly to teach you something.

Our most important infant taking its nourishment well; coming along nicely; healthy and thriving.

The Country Store and the Farmer

The Situation Reviewed by a Western Lady

Editor's Note.—Out in the West there is an elderly lady living on a farm who has never spent a cent with the mail order houses! This sensible person has bought all her goods from local merchants because she has realized that her interests and their's are identical. Hardware and Metal heard of her and decided that it would be interesting if she could be induced to give her reasons for patronizing the home merchant. In reply she has written what she believes to be the way that merchants can encourage farming customers to forget the mail order habit. In letter a suggestion is made that the country merchants would benefit by the services of efficiency experts who would call on the country merchants and explain the workings of new systems, methods, etc., thus helping the country merchant to be better equipped to combat mail order competition. The suggestion is a good one, but this very plan has been followed out for many years past by the trade journals. Mail order competition has been discussed from all angles, new methods adopted by dealers have been explained. Suggestions covering all phases of the country merchant business have been discussed time and time again. It is doubtful if any corps of organizers or efficiency men could begin to benefit the retail merchant to the extent which has been accomplished and will in future be accomplished by the trade journal.

THERE is a great deal of discontent these times in small country towns and villages over the decreasing local business done and the increasing trade going to the big mail order houses. This is becoming a serious issue in many districts, and any suggestions that will help to put things on a better footing ought to be welcomed by storekeepers and farmers alike. There is no doubt that in days gone by the country stores were very profitable. There was little competition, and they could charge what they liked. The farmer felt this, but had no resource but to buy locally. Now, however, with increased railway facilities, or a parcel post; they can trade in the city with the mail order house where they get greater choice and where the prices are sometimes less than in the country store. And after all, farmers are human, or want to buy as cheaply as they can.

They probably have not realized that by deserting their home store, they have taken the first step in the wrong direction. They have not thought that if everybody did the same, there would be very little business left for the local storekeeper; they have not realized that all money so sent away is lost to the community and never finds its way back.

One the one hand the storekeepers are discouraged at their losses; a few have taken the right way and are introducing better methods and winning back their business, but many do not understand where they are wrong or how to set about bettering things.

On the other hand the farmers feel that they are a little bit smart to get ahead of their local men. What is wanted is co-operation between the farmers and storekeepers and not stand-off resentment, which will never result in any benefit to anybody. Let the farmers go to the storekeepers and say frankly, "If you can give us what we want at reasonable prices, we will be glad to deal with you;" on the other hand the local man can cater to him a great deal better than a distant mail order house that doesn't know him or his tastes and has no personal interest in the matter.

What the country storekeeper wants is some sort of advisory expert, as they have in other businesses who would visit the country store, go over everything and help with advice.

Suppose a factory is not paying as it should, an expert is called in who goes over each department, timing the machines and the men at work, calculating the cost of each hour's work, etc.; until he ferrets out where the loss is occurring.

On the old worn out farms, where the farmers have got discouraged and the land seems to them only fit to grow weeds, the Government is sending out expert young farmers from the colleges, to live on the farm with the farmer and test out and try new methods, and are succeeding in making them pay their way.

It needs practical demonstrations to introduce new methods; and right here I see an opening for a few capable clever organizers to go out and remodel the country stores, and have heart to heart talks with the customers. Such men might well be sent out by the wholesale houses combined, the storekeepers being charged a certain amount for the benefit of their help.

That it is possible for the country store to compete with the mail order houses, has been proved and the farmers will soon find, that it is more convenient and a great saving in time and money to buy at home. That in patronizing their local men, they are indirectly benefiting themselves.

AN EFFECTIVE WINDOW SIGN.

A window sign of remarkable effectiveness has just been introduced in Chicago. It is a talking electric sign sufficiently small to be used in the show window without occupying enough space to interfere in any way with the display. As an indication of the effectiveness of the sign it may be stated that when it was first placed in the window of a haberdasher on Dearborn street it attracted such crowds that traffic was stopped and the police department found it necessary to order the sign shut off. Later, the makers of the sign were able to show that, although it attracted large crowds, it did not come within the city ordinance which prohibits window shows. The talking window sign was therefore allowed to be turned on again and continues to draw big crowds.

This sign is made up of small units about three inches square, which represents the size of the letters, which appear and disappear automatically. An ingenious flasher controls the mechanism that makes the changes. The sign can be arranged to spell any desired message. This is done by a very simple arrangement that corresponds in a manner with the way a printer sets type. All of this can easily be done in a few minutes by an office boy. When the various words have been "set up" the sign is connected with any lamp socket and turned on. It then proceeds to work and spells out in electric light the various words. The manner in which the words flash on and off seems to have a fascination for most people, and they will unconsciously wait for what is coming next.

After the thirty-two changes have been made they are automatically repeated, and this continues until the sign is turned off. There is an automatic cut-off that acts like a time switch, and this may be set so that the sign will stop at any time indicated. Small electric signs with fixed or movable letters of various kinds have been growing in popularity for show window use lately, but the "talking" sign naturally is vastly superior to the others when it comes to attracting attention. There can be no doubt that this new sign will be in great demand by retail stores generally. It is the "something new" that everyone is always looking for.—Merchants Record and Show Window.

COLLECT PARCELS FOR TRANSMISSION.

Ottawa, June 10.—The Post-office Department is considering whether or not it would be possible to undertake the collection of parcels for transmission by mail in cities where there is a mail delivery service. Hon. L. P. Pelletier announced the fact when he replied in the Commons to-night to comments made by Mr. Rodolphe Lemieux during the discussion of the estimates of the Post-office Department.

"I have it in my mind that the parcel post service will not be complete until we collect the parcels," said the minister. He asserted that the recently-established service was proving a success, and was steadily growing in spite of an organized campaign against it.

"CHALCO"

A PAINT AND VARNISH REMOVER THAT'S 20% MORE EFFICIENT THAN OTHERS YET COSTS NO MORE

To Retailers, Jobbers and Manufacturers:

We are now able to offer in "Chalco" a Paint and Varnish Remover of unusual merit.

It's 20% more efficient than others.

TRADE CHALCO MARK

The Paint and Varnish Remover

"We pay no royalties to put on your bill."

Write for Proposition

"Chalco" is positively different and positively superior—it leaves the surface better for refinishing than any other product we've tested.

It does not injure the hands.

Sell Varnish Satisfaction to *Your* Customers

Berry Brothers' Varnishes have been giving satisfaction for over fifty years. Varnish users know about them. They know that the dealer who sells and recommends Berry Brothers' Varnishes is giving them honest, lasting varnish values. This reputation helps you sell Berry Brothers' Varnishes.

Berry Brothers' advertising is a salesforce that brings folks into your store. For years we have been telling the public about the high quality of our varnishes. We have educated them to ask for Berry Brothers' goods—to know that our trade-mark stands for varnish satisfaction. Because of this, Berry Brothers' Varnishes are easy to sell.

And the Berry Brothers dealer gets **more** than the profit out of Berry Brothers' Varnishes. They help him to build his business reputation for selling high-grade goods.

If you haven't Berry Brothers' Varnishes on your shelves, let us tell you more about them.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, June 11.—Business continues good with both jobbers and retailers, and the reports generally are that trade has been very satisfactory all through the spring. There has been a good steady demand for ready-mixed paints, stains and varnishes, etc. Gasoline and benzine have declined half a cent a gallon, but the market is very firm on linseed oil, turpentine and white lead.

Linseed Oil.

The market is very strong both in raw and boiled oil, owing to the recent advances in flaxseed in the West. Some of the jobbers are sending out circulars to their customers advising them to place orders at the present prices, as there is every indication that higher prices will be asked very soon. It is reported that there is 40 per cent. less acreage sown in flax this year than was the case last year, and production is bound to fall below last year. An advance of 1 cent per gallon was made this week, and further advances are likely at any time. Quotations now are:
Raw Linseed—
1 to 4 barrels.....61c per gal.
5 to 9 barrels.....60c per gal.
Boiled Linseed—
1 to 4 barrels.....64c per gal.
5 to 9 barrels.....63c per gal.

Turpentine.

The market for turpentine is much firmer, and though prices locally have not been changed, it is expected, in view of reports of a firm market in Savannah, that a higher quotation will go into effect in the near future. There has been a scarcity of turpentine among several of the jobbers for some time, and though shipments have been coming in, they have not been in sufficient quantity to relieve the situation much. Quotations remain as follows:—
1 barrel .....64c per gal.
5 barrels .....63c per gal.
Five-gallon packages, 5 cents advance; packages extra; terms net.

White Lead.

The market for pig lead has developed strength since last report, and pig lead was quoted £19 10s. in London, Tuesday. In view of this situation white lead is much firmer, though quotations have not been altered. The price is $8.25 for less than ton lots and $8.05 for ton lots.

Gasoline and Benzine.

A reduction of half a cent per gallon has been made in gasoline and benzine since last report. Business is still very brisk and jobbers appear well satisfied with the outlook. Quotations now are:
Barrels, in wood .....21c gal.
In steel and drums .....18c gal.
Tank wagon (100 gals.).....17½c gal.
Benzine is quoted at 20c per gallon, in single barrels.

Glass and Putty.

There has been no change in the glass market, and the demand has been about as usual. There is a fair amount of building going on at the present time, and this has tended to brighten trade to some extent. Prices for both glass and putty will be found in the current quotation list.

TORONTO.

TORONTO, June 11.—As intimated last week, turpentine and linseed oil are showing activity. The former advanced one cent in Jacksonville during the week and has been followed here by a raise of two cents that goes into effect to-day.

Flaxseed has also gone up in Winnipeg, although oil remains unchanged. The only actual price changes in the local market during the past week, aside from that of turpentine were the further reductions in gasoline and naphtha, and a raise of twenty-five cents a barrel in resin. Paints and accessories head the list of the seasonal goods in local demand.

Turpentine.

Turpentine showed an advance of one cent in Jacksonville, that has been followed by a two-cent raise here that goes into effect to-day. Present prices are as follows:—
Less than barrel lots..... 75c per gal.
Single barrels ..... 69c per gal.
Two to four barrels ..... 68c per gal.
The quantity coming in at producing centers is much less than that of the corresponding period a year ago and such has been the case for some time.

An article described as second-run turpentine is being offered locally at reduced prices. No such variety is known to the manufacturers in general who maintain that at the price offered this article must be of very inferior quality.

Linseed Oil.

Linseed oil has recovered from its flabbiness and as intimated last week, is quite steady with prospects of a stiffening in price. Flaxseed has advanced considerably at Winnipeg.

It is said that only a limited amount of English oil is coming into Canada at the present prices and the market quotations depend upon this country's own production.

Robert A. Bird & Co.'s weekly report states that: "The world's shipments to Europe since 1st January are now down to the level of the quantity shipped during the same period last year, while supplies afloat are only half of the quantity afloat this date 1913. Stocks of oil in Europe are very much higher than usual and this fact has had a somewhat depressing influence on the market, in spite of other bullish influences.

Gasoline and Benzine.

Gasoline has dropped another half-cent since its tumble of last week, so that it is now twenty cents. This is in marked contrast to the prevailing rate of twenty-four cents that prevailed all of last summer. Benzine, following its one-cent drop of last week, has come down another half-cent, making it nineteen cents. Demand in both lines is good, that in gasoline particularly so. For three-barrel lots the rate is a half-cent less on both articles.

White Lead.

White lead remains unchanged as shown by the current market quotations. Demand for it in connection with paint lines in general is very good. There appears to be no present changes of a startling nature to be feared in this line.

Glass, Putty, Etc.

Glass plate is still forty and five per cent. off list for country and 50 and five off for city. Other quotations are unchanged as shown in current market quotations. These lines remain in fair demand, in conjunction with builders' supplies and paint lines.

Paints, Ready-Mixed and Dry Colors.

These lines are in very good demand and show no sign of falling off, in view of the promised good weather ahead. Prices are unchanged from recent and present current market quotations.

CATALOGUES AND BOOKLETS.

Morrill Products.

Chas. Morrill, New York, has recently issued an attractively designed and illustrated catalogue of twenty-four pages, featuring the Morrill Products, including saw sets, bench stops, box openers, nail pullers, liquid soap dispensers, hand punches, spike pullers, lead seal presses, etc. Copies will be mailed on request.

The heart of paint

70% Brandram's BB Genuine White Lead

is its base, because the life of the paint depends upon the endurance of the base.

30% Pure White Zinc

B-H "ENGLISH" PAINT

naturally excels in endurance, because the base for all colors that can be made with a white base is 70% Brandram's B. B. Genuine White Lead and 30% Pure White Zinc ground in pure Linseed Oil.

This is the guaranteed formula, from which we never depart.

B-H "ENGLISH" PAINT, which never fails to meet every requirement of the consumer, must be a profitable paint for the dealer to handle. Merit always wins out in the end—big business successes are based on quality.

B-H "ENGLISH" is made to meet the **steady** demand for an absolutely reliable paint. It is the kind of paint that turns the casual user into a regular customer.

Write us and we will tell you how you can get an agency of terms most favorable to you, including the constant help of our Advertising Department.

Consumer Satisfaction

is the secret of success in your paint business as well as in your other lines. Your customers simply cannot help being satisfied if you sell them

Jamieson's Pure Prepared Paints

They are backed by over half a century of successful paint-making experience; a profitable line for you to handle.

Will you be our agent?

R. C. Jamieson & Company, Limited

MONTREAL **Established 1858** **VANCOUVER**

Owning and Operating P. D. Dods & Co., Limited

I would rather stroke a bird's wings than woman's hair.
And the fragrance of the rose pressed against my lips
Is sweeter and more sincere than woman's kisses. —El-Rami.

These who have read:
"The Soul of Lillith," written by Marie Corelli, no doubt have been struck by the cynical expressions of El-Rami as to women's constancy. Throughout the whole novel there is a tone of doubt of women in general, though in discussion with Feraz, his brother, he admits there are clever women and faithful women; but further states: "we men seldom choose them, we are fools and we pay for our folly."

There is NO DOUBT of the high quality of the goods we manufacture, **The High Quality is Constant.**
Take for instance **HARRIS HEAVY PRESSURE** "the babbitt metal without a fault."

We have spent years in experimenting in our chemical laboratory to produce a babbitt metal which would fill the bill in 95 cases out of 100 where genuine babbitt is used and our sales, which are increasing most rapidly, give evidence that the **quality is constant and the metal reliable.**

Engineers know that H.H.P. is built for service.
H.H.P. is the best babbitt metal for all general machinery bearings.
H.H.P. will not crack or squeeze out.
H.H.P. runs cool at any speed.
H.H.P. is copper-coated and copper-hardened.

Every hardwareman should carry a stock of **Harris Heavy Pressure.** You can honestly recommend it, **knowing the quality is there.** Our reputation and guarantee is back of every pound. Write for prices.

HOLE

ROBERTSON'S SOCKET HEAD WOOD SCREWS

These screws are far superior to any other kind. They have a square hole into which our specially designed driver fits snugly. The driver cannot slip and thus spoil screw heads or material.
We also manufacture high-grade Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.
Drop a card for catalogue.

ANY and ALL

Kalsomine or Wall Finish

Let there be no misunderstanding. That $100.00 offer of ours for the Sick Children's Hospital is open to any one, whether their product is called kalsomine or wall finish. It's all the same to us. We believe we've got the best article on the market and no product that claims to do what Muresco does is barred from the offer.

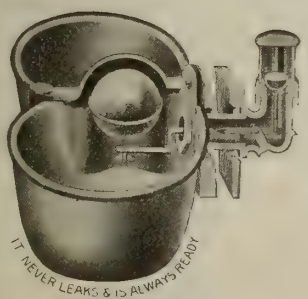
Benjamin Moore & Co., Limited, 6 Lloyd St., West Toronto

Look Alike to MURESCO

Do you sell it?

Means good profit for you and satisfaction for your customers.

Stephens PURE PAINT



It is made from pigments that are purchased in the best market in the world, and combining them with Pure Manitoba Linseed Oil, using the latest and most up-to-date mills and mixers, we are enabled to turn out a class of paints that cannot be equalled by any other house in Canada.

Drop us a post card for Agency proposition and color cards.

DON'T LET NECESSITY DRIVE YOU

Increased cost of doing business, keener competition, revolutionized methods of merchandising, new demands of the buying public have forced many paint dealers to turn their paint departments inside out.

TO MAKE A PROFIT

YOU CAN BE AHEAD OF THE DICTATES OF NECESSITY BY SELLING

Maple Leaf Paints and Varnishes

Our proposition decreases your cost of doing business.

Because it is condensed, permitting more frequent turnover, and better profits on a smaller outlay.

It stands the gaff of the keenest competition and puts the M. L. agent ahead—where he can give the other fellow dust—not take his.

It has been adapted to the modern idea of intensive merchandising.

It meets every demand of the paint-buying public.

M. L. Lines Satisfy Both Dealer and Consumer

M L FINISHES THAT ENDURE

QUALITY

While Quality is the very essence of our proposition, and we place it above every other consideration to induce you to handle the M. L. Line, yet we co-operate with you through our DECORATIVE AID DEPARTMENT to develop trade.

Write us to-day for catalogue and descriptive color cards.

Making Satisfied Customers

Is the Recipe for Building a Real Business

RONUK FLOOR POLISH

Ronuk Floor Polish is so far superior in every respect to ordinary wax or varnish that everyone who buys it from you becomes a permanent customer—your best asset. Ronuk is a paste, different from ordinary wax or varnish. It sinks into the pores of the wood, and forms a finish smooth, durable and beautiful. It is easy to apply and polish, and never requires scrubbing.

Ronuk is being extensively advertised in newspapers and magazines throughout Canada, and the manufacturers are co-operating in every way to help dealers. Prices and information on application to

BY APPOINTMENT TO HIS MAJESTY THE KING.

The use of Ronuk in the Royal Palaces and the following large institutions attests its superiority:—

New Central Y.M.C.A., Toronto.
Notre Dame Congregation, Montreal.
Appleby School, Oakville.
Seminaire de Quebec, Quebec.
City Hall, Quebec.
New Private Patients' Wing, New General Hospital, Toronto.
C.P.R. Dining Rooms, Montreal.
And many others, a complete list of which will be sent on request. 39

You May Become a Practical Window Dresser for $2.60

This is the first book ever written devoted exclusively to Hardware Window Display, and is a really new and good book. It is a practical, up-to-date collection of ideas of the most expert window dressers in the world. There are hundreds of displays in the book that can be put in at practically no expense — any one of them will bring enough extra trade to the store to pay for the book many times.

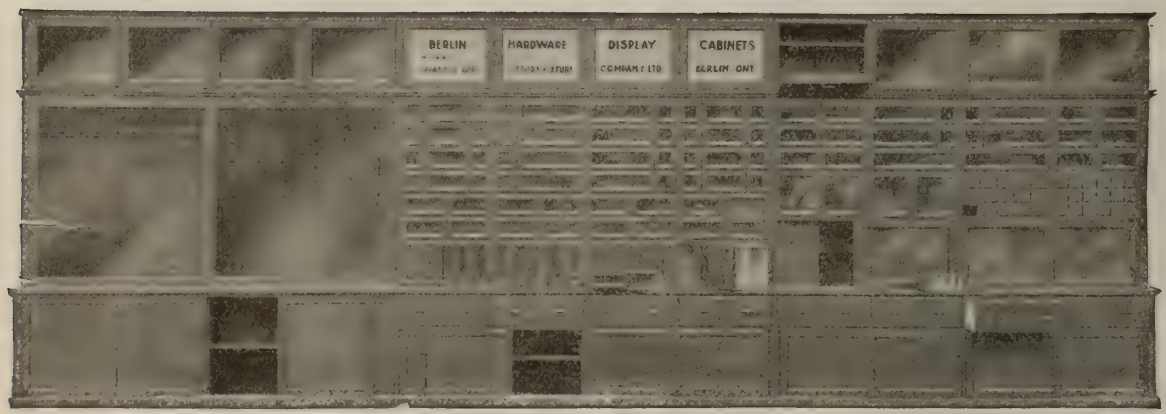
You Can Back These Paints

To Give Absolute Satisfaction



In the Ramsay line there is the right finish for every purpose; and an iron-clad guarantee for the quality of every can. That makes sales easy and profits big. In the Ramsay paints there is an ideal combination of honest, time-tried materials and modern, scientific skill in mixing.

That makes kicks rare.

What more do you want from your paint stock? Write us.

A. Ramsay & Son Co. Montreal

ESTABLISHED 1842

All stock systematically stored.

It's easy to get at quickly and is free from dust and dirt.

Berlin Hardware Display Cabinets

Save time and labor and give the store a very attractive appearance

They are designed to meet your special requirements, are made of oak and beautifully finished.

Goods are displayed behind glass doors or display front compartments. They never get dirty or dusty.

The method of display appeals to customers because they can see what they want at a glance. You do not have to look on shelves or in boxes or be continually dusting and cleaning tools to keep them in the prime of condition.

Will be pleased to furnish estimates.

The gathering of the clans

"On to Toronto!"

YOU have doubtless noted with gratification the great movement for honesty and square dealing which is revolutionizing American and Canadian business methods. Our goods, our salesmanship and our advertising are being cleansed and vitalized by the spirit of truth and sincerity.

As a result, we see a growing public confidence in manufactured products and their advertising — a confidence which, if preserved and fostered, will decrease our costs, increase our profits, and become a business asset of incalculable value.

Foremost in the fight which has brought about this revolution stand the Associated Advertising Clubs of America, whose emblem is shown above. If you are a business man, interested in the manufacture, distribution, or selling of commodities of any nature, you should attend the Tenth Annual Convention of the A. A. C. of A. at

TORONTO

June 21-25, 1914

At this Convention you will hear the inspiring story of the manner in which these tremendous reforms are being effected. More than this, you will hear the problems of distribution, merchandising, salesmanship and advertising discussed by able and successful business men, in a series of open meetings.

These meetings will cover the questions of chief interest to the 10,000 business men comprising the 140 clubs of the A. A. C. of A. —*your own* problems included.

EDWARD MOTT WOOLLEY, the famous writer on business topics, has written a booklet entitled *"The Story of Toronto."* This booklet describes in a forceful, intensely interesting manner, the wonderful work the A. A. C. of A. are doing for clean advertising and square business methods, and the significance and importance of the Toronto Convention. This booklet will be sent free to all business men asking for it on their business stationery—together with detailed facts as to the convention programme and rates for accommodations.

Winnipeg, Calgary and Branches

Louis Riel was Not a Fighting Man

"Riel had a wonderful capacity for uttering philippics. Despite his extravagant, vain, erratic, and mercenary characteristics, he could at any time set the French half-breeds of the West into excitement and violence as easily as he could set the autumn prairie on fire with his flint and steel." So Rev. R. G. MacBeth begins his stirring series in MacLean's Magazine for July, of personal reminiscences on the fighting line in 1885. As a young lieutenant on the scene of the trouble, the author tells, with the story-teller's magic, the events of thirty years ago, of which the present young Canadian generation has history only. This series is well illustrated and is full of intense interest throughout.

Hugh C. Weir's serial, entitled Madelane Mack — Detective, begins in this issue. This has not yet been published. Each instalment is a finished story in itself.

Other articles of careful selection will compel attention by their inherent newsiness and information. Here are a few of them.

Alcoholism—From the Angle of Efficiency. By John Barron.
Military Training. By Col. Winters.
The Miracle of the X-Rays. By Dr. Bates.
To Foster Art in Canada. By J. E. Staley.
Efficiency in Business. By One of the Emerson School.
May Irwin—Dramatic Widow. By Margaret Bell.
Glen Campbell—Westerner. By Robson Black.
Happy Children Make Efficient Men. By Dr. O. S. Marden.
The Business Situation. By John Appleton.

This is a repertoire for July that may well gratify any Canadian.

See that MacLean's gets to your library desk. It dignifies Canadian art and letters.

Send us a postcard and have your name placed on our subscription list.

Subscription $2.00 a year. *Twenty cents a copy.*

BUCK BROTHERS
Millbury, Mass., U.S.A.

Hardware and Metal's Electro Service

AT the request of many of our readers and in order to assist Canadian hardwaremen in such a manner as to make it easy for them to use illustrations of staple hardware lines in their newspaper, circular or catalogue advertising. Hardware and Metal's editorial department has instituted a new service, viz., the supplying of electros of staple hardware lines at a reasonable price. Many merchants claim that the electros they have on hand are of such large proportions and occupy such large space that their use is almost prohibitive on account of the cost of newspaper space. By using small electros of seasonable goods the merchants will be able to feature several lines in one advertisement at a very reasonable cost. Hardware and Metal will from time to time publish seasonable advertising suggestions in which electros here shown will be used. In ordering electros be sure and order by numbers. Price of electros is 15c each. Cash with order.

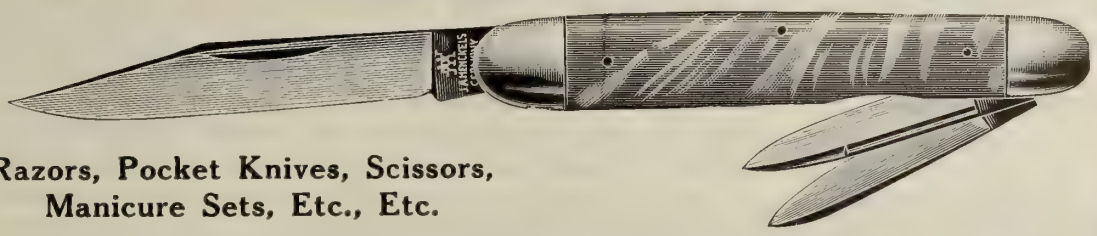
Business Development

¶ Do you ever feel that your present occupation prevents the development of your business talent?



¶ Many a young man is engaged in office or store clerking. Owing to the nature of the business, he has but a narrow range in which to exercise his talent. He cannot relinquish his position to seek one giving better opportunities and paying a larger salary. To do so would be to give up his only source of revenue, and someone may need his support. Yet it is imperative that he increase not only his business, but also his salary.

¶ We will solve the problem for you. We have need of part time salesmen. Men who can devote spare hours to our work and make as much, and in many cases, more money than they can from their regular occupation. Many of these men we develop into regular road men with a high salary. Do you feel that there are latent forces in you, waiting for an opportunity to assert themselves? If so, we want you to let us show you how to discover them. Write at once for the particulars.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Limited. Supplied by the trade throughout Canada. (tf)

THE NATIONAL CASH REGISTER COMpany guarantee to sell a better register for less money than any other house on earth. We can prove it. Make us. The National Cash Register Co., 285 Yonge Street, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fensom hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fensom Elevator Co., Toronto.

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Every Horse Owner Buys at Sight

The Kling Hame Fastener holds the hames tight and uniform at all times. A child or woman can hitch up as easily as a strong man. Only takes a second to put on or take off, yet the horse can never open it or break it. Lasts longer than the harness. Costs the dealer $2.25 per doz. Any jobber. Write for circular.

Look for "Kling" on the lever.

The National Safety Snap Co., Inc., Dept. 33, Wilmington, O., U.S.A.

Strength
where it is needed

The Rabone Rule with *three arch joints* is the strongest four-fold Boxwood Rule on the market. The joints are made on the Rabone patented grease-retaining system; they do not bind or wear loose.

We have made Rules for 130 years.

They are neither a side line nor a department, every one bears the time-honoured name of

JOHN RABONE & SONS.

Illustration shows a reduction of No. 1192, a two-feet four-fold Boxwood Rule made with three heavy brass arch joints and brass and German silver middle plates. It is marked 8ths.. 10ths., 12ths., 16ths.; permanent markings; all French polished. These come packed six in a box and sell quickly.

Samples and prices of all Wholesale Hardware Jobbers. Canadian Catalogue from our Agent:

It's the Corrugations Around the Joint

THAT MAKE

Stanley's Corrugated Hinges

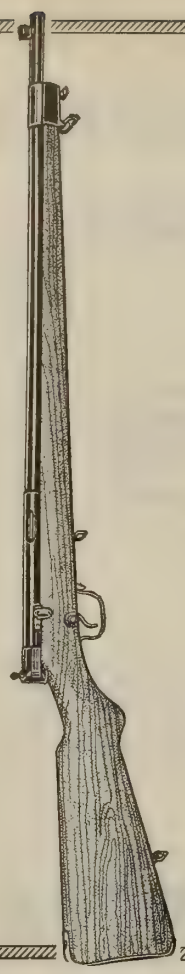
so much stronger than the old style strap and T-Hinges.

Instead of binding on the pin and breaking soon after they become rusty, Stanley's Corrugated Hinges, because of their construction, never bind and consequently are not subjected to the uneven strains that even the toughest steel can not long withstand.

STRONGER, LIGHTER IN WEIGHT, NEATER IN APPEARANCE

it is not surprising that Stanley's Corrugated Hinges are becoming more and more popular every day.

In ordering specify **Stanley's**
No. 935 Corrugated Heavy Strap Hinge
No. 937 Corrugated Extra Heavy T-Hinge
Sizes, 4 to 12 inches.



Besides the plain steel, these hinges are also made in Japanned and Galvanized finishes, or Galvanized with Brass Pins.

Packed in barrels, **or one pair in a box with screws.**

Manufactured by
THE STANLEY WORK
NEW BRITAIN, CONN.

TRADE S.W. MARK

FOR YOUTHS

The Summer trade in light calibre rifles is now on.

It will pay you to make a special display of ROSS "CADET" Rifles.

This .22 calibre rifle has been adopted by the Canadian Government for use of Cadet corps, and has successfully withstood all possible tests.

It is strong, safe and accurate. Its action is speedy, its sights, of a novel design, are equal in effectiveness to many special sights, retailing at over $5.00.

There is a fair margin to dealers, besides the satisfaction of handing out a superior article.

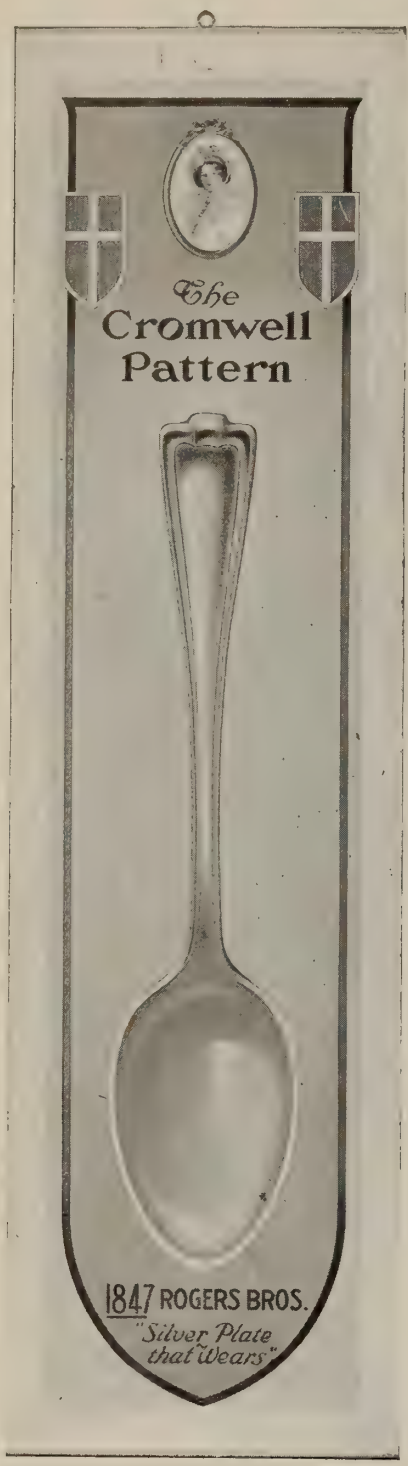
Canada Cement Sells the Rest of the Bill--

When a man comes into your store to buy cement for a concrete building, you know that he needs other supplies to complete it. He will naturally buy these at the same time that he buys the cement. The attached bill is a sample of what you can sell him.

To keep this trade, you should sell that kind of cement which will give him the greatest satisfaction.

CANADA Portland CEMENT



is made in twelve large mills, situated so as to supply all parts of Canada promptly and at minimum prices. By producing such large quantities every year, it is not only possible, but economical, to have a well-trained staff of skilled men to oversee every detail of manufacture from the time the raw material enters the mill until it is delivered to you.

AUTOMATIC ELECTRIC WASHER

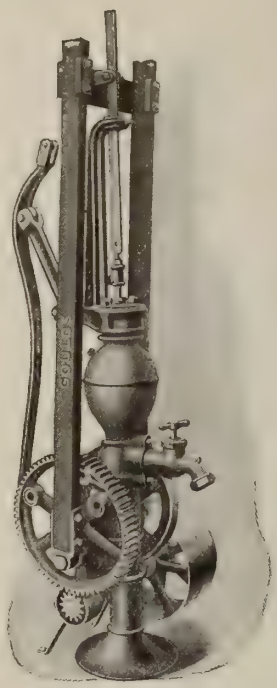
(BUY IT IN CANADA)

This machine possesses so many attractive features and is so absolutely pleasing to the people who use it, that there is no excuse for there being any other Electric Washer.

Dealers who delight in the friendship of their customers and who take especial delight in selling something better than can be had elsewhere, cling to the Automatic.

Such character does not come by accident; it is the result of a perfect 100% score, when considering Simplicity, Mechanical Operation, Materials, Workmanship, Efficiency, Convenience, Ease and Safety.

Made in both Electric and Engine Power types, also in Bench or Platform type.



A beautiful 32-page book, called Bulletin 107, gives full particulars regarding washing machines. It is free. Write for it.

Sold by Canadian Jobbers.

For Contractors!

SMP Contractors' Bucket
No. 1600

WHY?

HOT GALVANIZED—Fills the seams and makes a stronger bucket.

LOW PATTERN EARS—Put on below **reinforced** rim, and fastened with 4 rivets through each ear.

REINFORCED RIM—The best contractors' buckets first wear out along the top rim. We reinforce this top rim with 5/8-inch half oval rod, fastening same with **6** rivets just underneath the 1/4-inch wired edge.

THE PROOF!

Take the best bucket sold to contractors anywhere and a **SMP** contractors' bucket and hammer both of them on the mortar board as laborers do. The **SMP** bucket will outwear any three of them.

Are You One of the Capable Men of Your Locality?

Does your present income permit you to enjoy all the every-day luxuries, an occasional vacation trip, a new watch, bicycle, or possibly an extra fall suit?

We are anxious to appoint a capable man in your district to represent MacLean's and The Farmer's Magazine.

In all parts of the country hundreds of energetic men are representing our publications, supplementing limited home incomes, or, in other cases, making this work their only vocation. Some of them earn more than managers of leading concerns.

The work is enjoyable, keeping you out of doors and in touch with the activities of the community. You will not be a canvasser, for as a representative of MacLean's or Farmer's Magazine you will be received as one of the successful, capable men of the community. Consequently your success is assured from the very start.

On each order, new or renewal, you will receive a definite commission, so that your salary will be gauged entirely by your efforts. No previous business experience is necessary. We coach you and co-operate with you at all times. If you will write us to-day, we will gladly tell you further about the work.

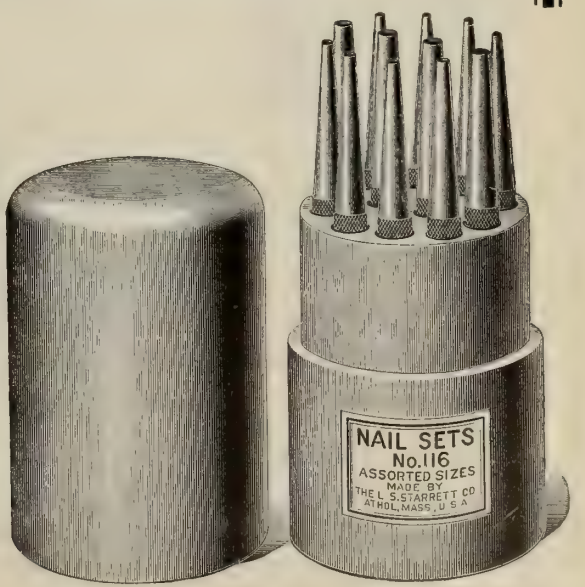
Starrett Tools
That Are Not Measuring Tools

42-326

Of course, the word "Starrett" makes everyone think of Precision tools for fine measuring. However, in addition to our measuring tools we have made from time to time certain special tools to meet the demand of mechanics who were dissatisfied with the tools then on sale.

Into these special tools we have put the same care, skill and fine material that have made our fine tools so widely used, and we know that hardware dealers can make easy sales on these tools merely because they bear the name, "Starrett." They will back up the Starrett reputation after they are sold.



We show here a few of these tools and we want you to remember them when you have a customer for this kind of goods. The nail sets in particular will appeal to carpenters and pattern-makers, as they are made of the best steel, perfectly tempered so they will stand long service without chipping or mushrooming.

Our catalog No. 20M.A. shows the full line and gives prices. Send for your supply.

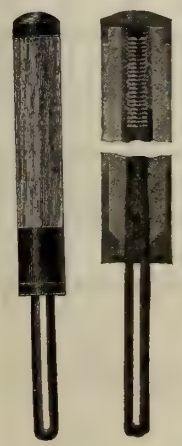
A Stock of Disston Cross-Cut Saws Will Increase the Popularity of Your Store Among Good Lumbermen



The man who pulls on a Cross-cut saw day after day wants a saw that will make his labor as light as possible. He knows as soon as he puts a saw to work whether its grinding, stiffness, and the set and keenness of the teeth are good. When he asks for

DISSTON CROSS-CUT SAWS

you know it is because he has found they are the best.

Why not cater to this growing demand, and give your customer the best, whether he asks for it or not? In one case you have pleased him. In the other you have not only given satisfaction, but have established a quality reputation for your store.

Send for our Cross-cut saw booklet—the most complete ever published.

DISSTON NO. 122 HANDLE

is gaining wider favor every day through its durability and the ease and speed with which it can be attached and detached.

It will be noticed in the sectional view that the cap is made with a long neck, tapped to fit the threaded end of loop rod. This rod extends through the handle, making the connection and line of pressure, when on saw, from top of handle to bottom edge of blade, insuring a strong, firm grip on saw, without the possibility of lost motion or wobbling. The length of this handle is 8 inches, and the diameter 1¼ inches.

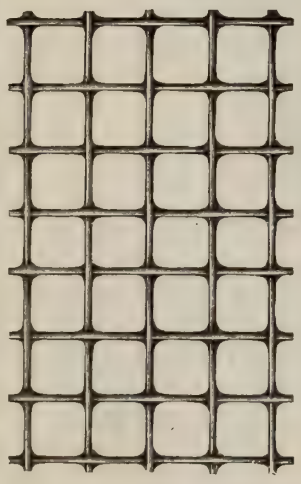
ELEY

CARTRIDGES

We Load for the World!



¶ No Ammunition Manufacturer or Loader handles or loads a greater variety of shot gun powders than ourselves, consequently our experience of the styles of powders and the specification of loads which give the greatest satisfaction to sportsmen is second to none.

Eley Smokeless Shot Gun Powder (33 gr. class) is inferior to no other powder. 33 grains is the Eley Standard load, and that this will do the work more satisfactorily than heavier loads of other powders is one of its merits. This load gives results equal to 3¼ drs. of other bulk smokeless powders.

ELEY CARTRIDGES are shot in the snows of Canada, the heat of Central Africa and India, and elsewhere throughout the world.
SOLD BY ALL GUNMAKERS AND AMMUNITION DEALERS.

"Prolonging The Life of Steel"

Opinion of *Scientific American* on

Keystone Copper Bearing Steel:

"The general results of alloying steel with the other metal show that copper and nickel are the best metals to add to the steel to give increased durability. Nickel is prohibitive on account of its price for general commercial uses.

Copper added in small quantities greatly prolongs the life of iron. Very small quantities are needed to effect this result."—Scientific American, issue of Jan. 3, 1914.

We shall be pleased to send reprint of above article complete, together with booklet showing results of a series of actual service tests. These indicate clearly the superiority of Copper Bearing Steel, and are of particular interest to all buyers and users of Sheet and Tin Mill Products.

GLASS DOOR

GUARANTEED

No. 7

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

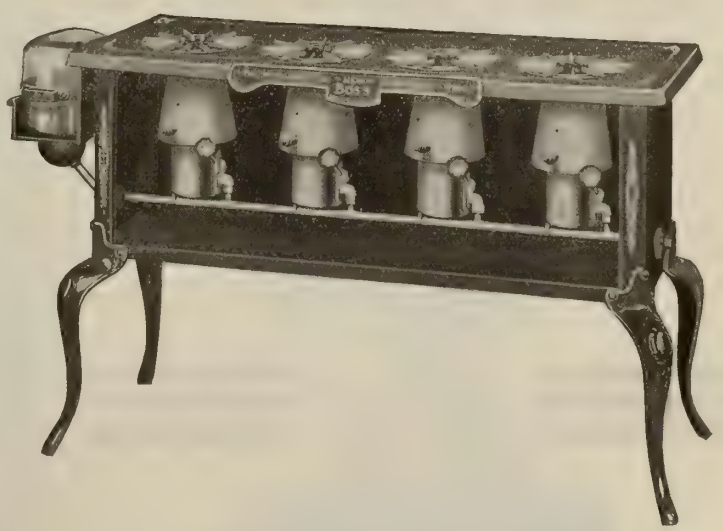
The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

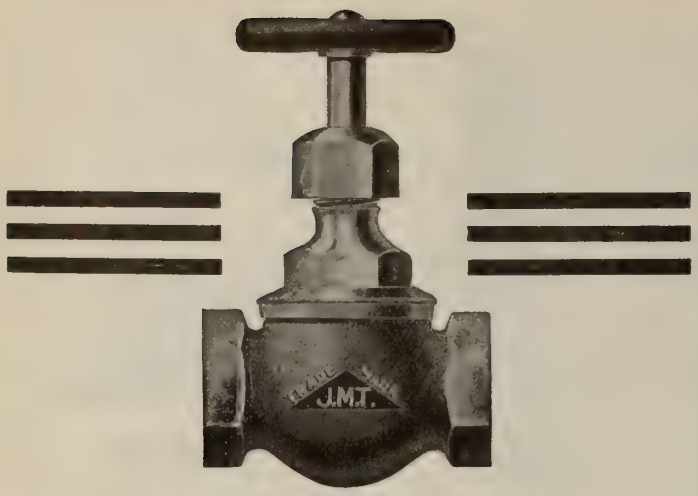
Write to-day for Complete Catalog and prices.



NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.



Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

Morrison Brass Valves

IT TAKES a mighty good valve to stay on the market for over twenty-five years. But that is what the Morrison Line of Brass and Iron Valves has done. It means that Morrison Valves are the kind that make satisfied customers. When the same men have been ordering valves from us for all these years, don't you think it would pay you to investigate the merits of the goods that have held their custom? Better let us send you our catalogue of Brass Goods, which shows a valve or cock for every purpose. The design, the materials, the foundry and machine work, the price, every detail that goes to promote valve sales satisfactory to you and your customer is RIGHT.

NICHOLSON MADE FILES

Dealers Like To Sell NICHOLSON-MADE-FILES

Because they "make good" on the strongest personal recommendation he could possibly give to any file.

They're the net result of fifty years devoted exclusively to making efficient files.

Uniformity of temper and cutting-ability is one of their strongest points. A mechanic might select a dozen NICHOLSON-MADE-FILES from among a thousand similar ones—and he'd find the same fine "balance"—the same even "draw" in every one.

This uniformity saves employers many dollars in mechanics' time—and should bring many dollars' profit in "repeat" orders if properly emphasized to your trade.

"Competition Is a Word of the Past to Peerless Agents"

That's the way Peerless dealers speak about their agency. Read what this experienced dealer says about Peerless fencing. Note his Peerless sales ran six times greater than that of other fencing. Look—

The Banwell-Hoxie Fence Co., Hamilton, Ont. Middlemiss, Ont., Jan. 8, '13.

Gentlemen:—I have been selling fence for the past seven years and in that time have represented several different firms. It gives me pleasure to say that I took the agency for your fencing for 1912 and have sold in that one year more fence than in the other six years of my business, and the best of it is I have not had one complaint in any way against Peerless fence. Different from most fences it stretches flat and all wires of even length; the lock is tight and strong and the quality of the wire is of the best. There is very little other fence used in this district and competition is a word of the past to the agent for Peerless fencing.

Yours truly, J. A. McDONALD.

This is but one of many similar dealer's letters in our files. Everyone is enthusiastic about his Peerless agency. Everyone has nothing but praise for Peerless fencing—the fence that saves expense.

Peerless Poultry Fence

is made of the best Open Hearth steel fence wire—tough, elastic and springy—and will not snap or break under sudden shocks or quick atmospheric changes. Our method of galvanizing prevents rust and will not flake, peel or chip off.

The joints are securely held with the "Peerless Lock" which will withstand all sudden shocks and strains, yet Peerless Poultry Fence can be erected on the most hilly and uneven ground without buckling, snapping or kinking.

The heavy stay wires we use prevent sagging and require only about half as many posts as other fences.

We also build Farm and Ornamental Fencing and Gates.

Do You Want the Peerless Agency?

We still have some valuable territory open to good reliable dealers. Do you want it? Do you want to be the leading fence dealer in your locality? Then write us. Ask for our dealer's proposition now before someone else gets ahead of you.

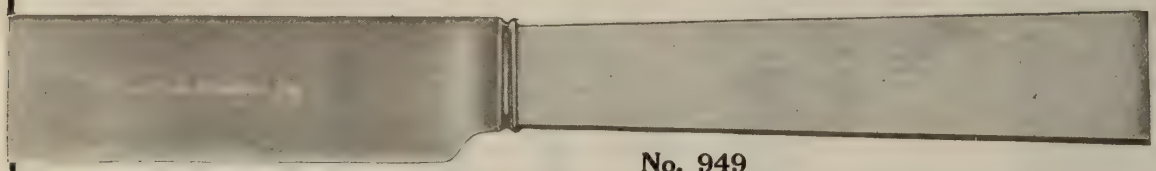
Service

is what "Wear-Ever" Success is Built On

For twelve years we have built up a co-operation plan with the dealers. For the same length of time we have been educating the women of this country and are still educating them to understand that aluminum utensils may differ greatly in material and workmanship, that **"Wear-Ever"** utensils are made of metal which is harder and more dense than can be metal that is spun or cast; that just as there are many kinds of enamelled ware, so also there are different grades of aluminum ware; that **"Wear-Ever"** ware gives enduring service.



For the dealer, we have furnished printed matter and display helps, such as store hangers, street car cards, display cards, window display suggestions, newspaper advertisements and **"Wear-Ever"** store demonstrations.

These backed up by a constant consumer demand help increase the sales of every **" Wear-Ever "** dealer. It's to your advantage to be one. Let us tell you more about it. A post card will do.

Are Your Customers Slow in Paying Up?

Why do people use this saying "as safe as the bank?" Is it not because "The Bank" has a system that is almost perfect, and because of this system a feeling of security is engendered in its patrons that makes for stable business relations through mutual confidence?

Your banker has a System that enables him to keep track of all the details of your account and he gives this information to you every time you make a deposit or withdrawal—He knows how your account stands ALL THE TIME and you have confidence in him because of his good system.

Do you know how all your customers' accounts stand ALL THE TIME? If you do not, you are not in the possession of important information you ought to have. Does your customer know how his account stands ALL THE TIME? If he does not, you are keeping information from him that he should have; information that will goad him into paying his account when he sees it mounting up; information that will enable him to regulate his other expenses so as to take care of the account. It means money to you and peace of mind to your customer. Your banker keeps you posted as to your account. Do as much for your customer; it will foster the same feeling of confidence, and confidence is the life-blood of your business.

The McCaskey System is "AS SAFE AS THE BANK" because it operates along the same lines. It creates confidence, gives information, and looks after a merchant's accounting in the most up-to-date manner known. Write for further information.

Vol. XXVI. JUNE 20, 1914 No. 25

Using a Catalogue in a Retail Hardware Business

Hardware Merchant in a Small Town Getting Splendid Results from a Catalogue Which He Distributes Within a Radius of Twenty Miles of His Store.

An authorized interview by Hardware and Metal representative with O. B. Henry, Drayton, Ont.

MY IDEA of using a catalogue in my own business is a direct result of my observations of the success the mail order houses have had in using it as their most valuable ally in their work of securing the legitimate trade of the country dealer from under his nose, as he slept, and I include myself as one of those who thus neglected his opportunities. I return the compliment by stealing their thunder.

I have found it to be the most efficacious means at my command of recovering the ground lost to the enemy in past years, to say nothing of the inroads I have been able to make on trade territory that lies far beyond the confines of the geographical limits that I had previously laid down as my trade boundaries.

I have not given up other advertising methods in spite of my enthusiasm for the catalogue. I still use our weekly paper which has a steady circulation of twelve hundred copies, a very good one for a country town of five hundred people in a farming district. I have been accustomed to using circulars also, but have discontinued them for the time being until I get a system of circularization worked out that will dovetail and fit in with the catalogue advertising.

My first and present catalogue was gotten out only as a feeler, but the results have been so far-reaching in their scope and so favorable in their conse-

No. 26. Solid brass swivel adjuster and chain; galvanized iron ground peg; regulation length cord; superior 2 inch webbing. One set in a box.
Price each $1.00

See Page 38 for Harness. We can Save you Money.

Two pages taken from the hardware catalogue of O. B. Henry & Co., Drayton, Ont.

quences that I can no longer consider it as an experiment but rather, an unqualified success.

The booklet consists of forty-eight pages which show only a portion of my stock. The cost for one thousand copies amounted to one hundred and seventy-five dollars. My next regular catalogue, which I shall get out next January, will embrace every article in my stock and consequently will require about one hundred pages and instead of one thousand I shall get out nearly double that number of copies.

In the rough, the catalogue is a modest replica of the jobbers' catalogues insofar as the cuts and the general description of each article is concerned. By making it such I was enabled to use their cuts and so reduce my own expense. In other respects I have endeavored to impart a little individuality to it as in the case of the general reading matter and the underlining of each page. For instance, an extract from the first page introduction reads as follows:—

"We guarantee each and every article we sell to be as represented, and expect you to return anything that you are not satisfied with, so we may return your money.

"We are constantly striving to improve the service given, the appreciation of which is shown by our constantly increasing business.

"Remember you can send us your orders by mail with absolute confidence, knowing they will receive the same careful and prompt attention as if you came personally to our store.

"We trust this catalogue will prove useful.

Yours truly,
O. B. HENRY & CO."

The following are some fair samples of the underlining at the foot of each page:—

"A square deal for everybody."

"Mail orders are given prompt and special attention."

"We never tire of taking pains to please."

"How easy it is to order by mail—try us."

"We stand behind everything we sell."

"It is a misfortune that we cannot show quality on paper."

"Do not turn over too hurriedly,"

and so on ad finitum.

I need not dwell upon the fact that we endeavor to make all of these promises good.

The accompanying cuts will give a fair idea of the general makeup of the pages.

For the fall trade I intend to supplement this catalogue by an additional leaflet dealing with the seasonal goods, etc.

The manner in which this sample catalogue pulls, for no other word so well describes the process, is surprising. In the first place, people are flattered and pleased by the attention that indicates an appreciation of their patronage, and a close study of their needs. This is more particularly true of the farming class who are not, as a rule, submerged in the avalanche of other advertising, attractive amusements, etc., that fiill the lives of city people.

Such a thing as this catalogue is an event to them.

Although they may not always be progressive themselves, farmers fully appreciate that quality in others, particularly when, as in this case, it benefits them. Its reception in their home is invariably of a favorable nature and it does its work while the merchant sleeps.

I find that people come in daily for the sole purpose of purchasing something that they saw in the catalogue and they come from long distances, for I sent the little book out in every direction within a radius of twenty miles. Frequently they say to me, "Why, I didn't know you had this in stock." The frequency of that remark has been a great lesson

(Continued on page 43.)

Auto Accessories a Splendid Hardware Line

Hardware Merchant at Paisley, Ont., Has Been Handling the Line for the Past Two Years — Large Turnover on Small Investment.

An authorized interview by Hardware and Metal representative with A. A. Sinclair, Paisley, Ont.

I HAVE been greatly surprised to learn that comparatively few hardware dealers carry a line of automobile accessories. This is the more surprising when the lack of small town garages is taken into consideration, for in the latter case one has no opposition other than that offered by some other town or city. Such opposition is negligible, for the small parts needed for a car are usually required without delay and in the case of the larger and more expensive parts that are carried in stock, the local hardwareman is better qualified to send away for them than his distant opposition is.

This line is such a perfectly natural one for the trade to carry, and further—to push, that it seems incredible that so large a number of country dealers, in particular, have failed to grasp the golden opportunity. I understand that a great many of those who do carry the line have neglected to go after the cream of it, viz., the more costly parts, such as tires, etc., simply because they do not carry such parts in stock. The smaller and cheaper auto parts, although they are very profitable, should be nothing more than a bait to hold the trade of car owners for the sale of the more costly parts.

I have been handling the line for two years and find that the business is constantly growing, not only through the local increase in cars, but owing to the fact that tourist travel is increasing every year and that the tourists necessarily buy a certain amount of goods in the country they travel through. As the good roads movement sweeps the country, this latter fact will be the more noticeable.

There were only four cars in the immediate vicinity when I first took on the line: there are twenty now. That is one illustration of the growth in a two-year period.

To get down to elemental facts: fifty dollars would buy my stock in this line, and yet I did an eight hundred dollar business on that investment in 1913. What straight hardware line can any of us claim as much for? This stock consists of a small quantity of batteries, carbides, Prest-O-lite tanks, spark plugs, battery connections, cement patches, blowout patches, wrenches, soapstone, adhesive tape, oil, tire and gasoline gauges, etc. In addition, I sell bumpers, lamps, horns, whistles, inner tubing, tires and other expensive accessories, but do not carry any of the latter in stock. Incidentally, I hold a sub-agency for the sale of cars and have just recently sold one. There is absolutely no expense to this; it is merely a case of getting the sub-agency, for which no deposit or purchase is required, making the sale and pocketing the commission. Included in my list of stock, mine although the other fellow carries it, are different makes of lubricating oils and greases to suit the requirements of the different makes of cars.

I have sold up to date this year, twelve tires, each of which represents a profit of at least eight dollars. As each tire sells for forty dollars or better, it can readily be seen that the cost of carrying a stock of them would be prohibitive for the country store with its restricted trade. This is doubly true when the fact is considered that one may have a call for any one of a dozen makes or sizes of tires. The same thing is true of lubricating oils and numerous other articles.

It can readily be seen that the most practical method is to allow the other fellow to carry the stock of such articles. They can always be obtained promptly from the nearest jobbing center and the owner is very seldom in a hurry for such parts as tires, oils, horns, etc. He usually carries extras of such articles, and even though he does not, can usually determine beforehand that he will soon have to replace a certain part. The customer is quite satisfied to be able to come in and get the small parts promptly, and if he is not waiting on me for the larger parts he would likely have to do so on someone else anyhow, and the average man will give his local dealer a fair show at his business so long as the latter does not charge him more than the other fellow.

I can get the parts here as quickly as any mail order house, and I stand behind my goods, ready to make good a defective tire or other part. The customer can come to me at any time and tell me his troubles, sure in the knowledge that I will do my best to help him: a much more satisfactory plan than dealing by mail with a firm that can offer no advantages of price or service to make up for the inconvenience it imposes on its customers.

Storage of Gasoline.

The addition of an underground storage tank for gasoline is a valuable addition to the dealer's equipment. The cost of same is about one hundred and fifty dollars and proves a good investment to the man who owns his own building. The tank may be buried in front of the store, and by the aid of paint the standpipe can be made a valuable advertisement of the fact that auto supplies are carried. No lettering is necessary; it is merely a case of painting the pipe a bright red, blue or some other catchy color, so that it may be seen from a distance, and its very presence signifies its purpose to the motorist who sees it from a mile away.

Naturally, I get the gasoline trade of those owners of cars who buy other car requirements from me and incidentally, for their small but certain profit and as a means of getting people into his store, for other than automobile use. Quite often I gain an entirely new customer in general lines through the sale of some small auto accessory. The mere sum total of my actual sale of accessories does not by any means represent the sum total of my sales as a result of handling the line, nor still less the good will that I have added to my stock.

The hardwareman's opportunity is no longer in the staple lines. He must carry them through force of necessity, for their small but sure profit and as a means of getting people into his store, but the specialties offer the greatest inducements as money-makers.

Of course, to be successful in the sale of such a line, one must tell the people by newspaper and otherwise that he carries it. The public at large knows without telling that the hardware dealer carries nails and screws, but the specialties must be kept constantly in evidence before it if sales are to be made. I usually make a prominent display of such articles in my windows and in cases convenient to the door. For instance, I handle grafaphones in the same manner that I do auto parts, carry one machine and a few records in stock and take orders. The sales are made through the fact that the grafaphone is one of the first things people see when they enter my store. They will buy nails only when they need them, whether hidden or

(Continued on page 57.)

HARDWARE AND METAL

VOL. XXVI. No. 25 Toronto, Canada, June 20, 1914 Two Dollars per Year

CLAIMS FOR DAMAGES

HARDWARE merchants have frequently complained about the difficulty experienced in securing redress from transportation companies for damages done to merchandise during transportation. In many cases the chief complaint has been in connection with the delay experienced by retailers in securing refunds or allowances. This delay, the railways claim, is very often due to the fact that the claimants do not supply complete information regarding the claim and the necessary documents as requested by the transportation companies.

Elsewhere in this issue Hardware and Metal has published full information regarding methods of preventing the necessity of making claims—methods of making claims, etc. If the instructions given are followed out, the transportation companies state that little or no difficulty will be experienced by merchants in having their claims amicably settled. The transportation companies also state that if claimants supported their claims with the proper documents described in the article it would very materially assist in bringing about prompt settlement. Delays are sometimes caused owing to the fact that shipments often travel over two or three different lines, thus necessitating investigation over each. Hardware and Metal found out during the course of inquiries that one of our largest railway companies are settling between 50% and 60% of the claims presented direct to them, within 30 days. Hardware merchants in order to avoid unnecessary delays should make all claims promptly and follow out the instructions given.

THE AUTO ACCESSORY LINE

ELSEWHERE in this issue a hardware merchant tells how in the year 1913 he did business to the extent of eight hundred dollars or more in auto accessories. This merchant carries a stock of accessories amounting to about fifty dollars and finds it sufficiently large to enable him to cater to the auto owners in his community. The experience of this merchant should act as a stimulus to other hardware merchants and cause them to investigate conditions in their community. The auto-accessory line is opening a new field for the hardwareman. One of the very desirable features in connection with the sale of accessories is the fact that many of larger items need not be carried in stock, but just ordered as needed. The jobber or manufacturer carries the stock and the hardware merchant can get prompt deliveries on most of the lines needed. The auto-accessory line embraces many items which form part of the regular stock in a hardware store.

When a merchant begins to figure out the needs of the autoists he should not allow himself to believe that the auto-accessory line embraces only such lines as tires, spark plugs, lamps, etc. These are good sellers, but there are many other lines as well.

One hardware firm in Western Ontario has increased its sales of metal polishes several hundred per cent. during the past three years, by featuring this line among many others for the use of autoists. The same firm has sold dustless dusters, chamois, spoke brushes, and even vacuum cleaners in fairly large numbers to auto owners. The cost of a representative small stock of auto accessories is not large, and when results can be obtained, such as those outlined by the merchant who gives his experience elsewhere in this issue, it is hard to conceive why almost every retail hardware firm is not actively pushing the sale of auto accessories.

SELLING SUMMER GOODS

WE are now entering the summer holiday season and the trade generally look for a slight falling off in the size and number of orders. It is unwise, however, to get the impression that a very fair volume of business cannot be secured during the summer months. When the holiday season arrives it is quite customary with some firms to relax their selling efforts and if business is rather dull to look upon the dullness as a condition that is bound to exist during the warm weather months. A good many of these firms often find at the end of the hot weather season that they have on hand a number of lines which should have previously been disposed of, and just before fall they make a desperate effort by price-cutting, special sales, etc., to sacrifice the balance of the summer stock. It is quite customary at the beginning of each fall season to see hardware merchants use extra newspaper space, floor space and window display space to aid in disposing of summer goods at or below cost. Is this good business? In some cases it is and in others it is not. The merchant who has used every legitimate method during the summer months to dispose of his stock can possibly be excused if he offers extra inducements in the fall in order to dispose of the remnants, but there is no excuse for the merchant who allows his sales aggressiveness to lie dormant during the summer months, and after the hot weather is over makes a mighty effort—often at considerable expense—to dispose of the remainder of his summer stock. Why not push summer goods hard during the hot weather months, rather than to wait until cooler weather approaches and then find it necessary to sacrifice time and profits in disposing of the summer lines when you should be busily engaged in the fall campaign.

RETAIL ADVERTISING

IN this issue the subject of retail hardware advertising has been dealt with at considerable length. This is a live subject with retailers at the present time. There are many retail hardware merchants throughout Canada who are anxious to advertise, and are firm believers in the value of retail advertising, but they are doubtful as to the proper course to pursue. In this issue a merchant in a small town in Ontario tells of the success he has had, and the business he has secured, from a 48-page catalogue which he distributed within a radius of twenty miles of his store. This merchant and several others who have gotten up catalogues of a similar nature have secured excellent results and their evidence points strongly in favor of small catalogues as being one of the successful methods which can be adopted by retailers in small places to secure business. There is one point we wish to make clear to our readers. The catalogue referred to in this article is not one of the so-called trade catalogues designed to serve the trade in general, and supposed to secure business for a merchant whether he be located in a mining district in Northern Ontario or on the other hand, in a fruit growing district in the southern portion of the province. The catalogue referred to in the article elsewhere in this issue is a catalogue prepared to serve the merchant in his particular community. It features the lines which the merchant knows are needed and can be used in his community. During recent years a number of catalogue schemes have been presented to retail hardwaremen and some of them have been very unsatisfactory. It has been our experience that the catalogue which produces the most beneficial results for the retailer is a catalogue which has been prepared with a view to serving the peculiar needs of the people residing in the community where the catalogue is distributed and not one prepared by men unacquainted with the requirements of the various communities. Readers of Hardware and Metal will find in this and subsequent issues many practical suggestions which will help in solving the advertising problems of the retail hardwareman.

MARKING OF FOREIGN GOODS

IT has been learned that a number of Canadian firms have been put to considerable expense and trouble owing to the fact that goods imported from foreign countries have not been properly marked. Hardware and Metal drew attention to this matter some time ago, but in order to make doubly sure that all readers will become thoroughly familiar with the regulations governing the proper marking of goods, we are quoting elsewhere in this issue, the section of the customs regulations governing this important matter. Importers should see that full instructions are given with orders for the proper marking of goods to be imported into Canada. Another customs notice

THE PROPOSED AFFILIATION

MEMBERS of the Ontario Retail Hardware and Stove Dealers' Association have been waiting for some time past to see what action would be taken by the advisory committee of the association regarding the proposed affiliation with the Retail Merchants' Association. The letter from President Macpherson, published in this issue gives the views of the advisory committee on the subject. The action taken by the committee will no doubt meet with the approval of the members generally, as they will now have an opportunity of discussing the matter in open convention at the next meeting which will be held at London in February. As stated by President Macpherson, it would be impossible to make the matter sufficiently plain in a circular letter, as there are many important features involved. The suggestion that the members at large might in the meantime express their views regarding the proposed affiliation is also a good one, and if the members take advantage of this opportunity it will assist materially in arranging the matter in more definite shape for consideration at the annual convention. There is probably no better way in which views could be expressed than through the columns of the trade press. Hardware and Metal will gladly publish expressions of opinion from any of the members.

THE BUSINESS SITUATION

BUSINESS, so far this month, as far as hardware is concerned, has been fairly satisfactory. Retailers are still cautious in buying, and orders are rather small, but this is considered a good policy to pursue and some jobbers are encouraging retailers along this line. May business appears to have been below that of the corresponding period of last year. The metal markets are still quiet and orders are of a hand-to-mouth character. Considerable price shading is still in evidence. The approach of the holiday season and the recent cool weather has affected business in some sections of the country. Stove manufacturers have had a heavy demand for summer stoves, but it is now slackening off to some extent. Paint manufacturers and jobbers report that trade with the retail hardwaremen is holding up fairly well, and that although orders being received at present are not large, they are very frequent. It appears to be the general opinion that if the crop outlook continues bright there should soon be a slight improvement in conditions. If a change takes place it will undoubtedly be for the better.

A VACATION PROBLEM

"WE would like to give our clerks holidays," writes a retail firm; "How can we do it without our trade suffering, as July and August are the busiest months in our year?"

It is refreshing to note that at least here is one dealer who is not afraid of the alleged summer slump myth and who finds the mid-summer months the best of the year. Regarding his question, a number of solutions could, no doubt, be offered, but it may be that they would not for some reason or other be adopted. Nevertheless it will do no harm to try.

Because July and August are busy months, is it to be assumed that the entire time of the clerks will be required? If so, then this firm can only arrange for holidays for the staff during other months of the year. June weather is usually good for a vacation and one clerk at least might be given his holidays then. If too late this year, it might be an arrangement for next. The clerk who likes fishing or boating might go in June.

There is no better month than September for a holiday. If one of the clerks is fond of duck and partridge hunting, September should be the month for his week or fortnight vacation. The Canadian National Exhibition is always concluded in September and if a clerk would enjoy a trip there and could afford it, there would be an extra inducement for him to take an early September holiday. September is also a splendid outing and camping month. October and November are months when a hunting trip is really most enjoyed and if one is fond of following the bigger game, he can easily find a holiday in them to his liking.

Advertising Methods of Retail Hardwaremen

Tendency on the Part of Hardwaremen to Use Illustrations on Their Advertisements—Samples of Several Recent Newspaper Advertisements.

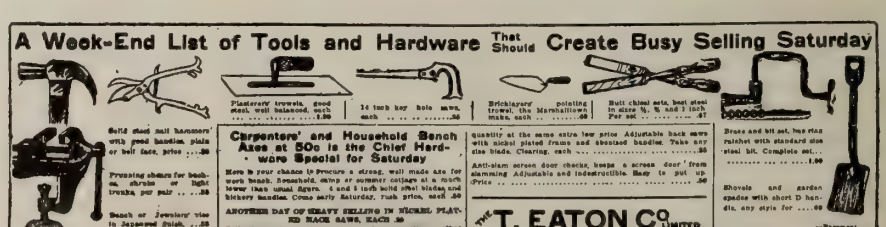
IN last week's issue of Hardware and Metal a new editorial service was announced. The new service, viz., the supplying of small electros to aid the retail hardwareman in preparing his newspaper advertisements, circulars, and catalogues, promises to be one of the most welcome of the many innovations introduced by this paper during recent years.

As announced last week it is not the intention of Hardware and Metal to simply supply the electros and allow the hardwareman to use them as best he can—but to show how similar electros are being successfully used by other merchants engaged in the same line of business—also to show how the electros can be used in preparing effective copy—copy that will pull business for the retail hardwareman. There are in Canada to-day a few hardware merchants who have been using small electros of staple hardware lines in their newspaper copy; but the number is not large.

Hardware and metal determined to find out why such a small percentage of merchants used electros, and after many weeks' investigation, during which many merchants were interviewed, and many hundreds of letters received from others—it was proven beyond a doubt that Canadian hardwaremen did not use small electros principally because suitable electros were hard to secure at a reasonable cost. Elsewhere in this issue we show the first assortments of electros which have been prepared. The assortments will be enlarged from time to time. In order to show that a number of Canadian firms are now making splendid use of small electros we are reproducing a number of recent newspaper advertisements.

Probably one of the first Canadian hardware firms to use small electros extensively for newspaper advertising was the Russill Hardware Co., of King St. E., Toronto. The system of using cuts was introduced by Mr. Russill, thirteen years ago. Ads. are used in three Toronto papers and the same heading is always utilized. The ads. appear on Friday of each week, and in addition to the illustrations, the description and the prices of goods are also given.

The general public have little knowledge regarding the many useful articles contained in a hardware store, and which may be purchased at a reasonable cost. Through advertising of this nature the customer finds that he can procure a useful article in the Russill store at a stated price and the sale is often really made before the customer starts for the store. Mr. Russill states that the use of cuts has been a paying proposition for them and that in addition to the large returns they receive in the store they also receive a large number of phone and mail orders. It is also a common occurrence for children to come to the store with clippings from the Russill ad., having been sent by their parents for some of the goods advertised.



Newspaper advertisement of Purdom Hardware Co., London, Ont., showing use of small cuts similar to those being supplied by Hardware and Metal electro service.

It is the opinion of Mr. Russill that a firm doing from 100,000 to 200,000 dollars business per year can afford to spend 3 per cent. on newspaper advertising. The Russill Co. have increased their expenditure every year since starting this system, and have found that they have received returns in proportion to the amount expended.

The Purdom Hardware Co., London, Ont., has been using small electros for newspaper advertisements for the past six years. The advertisements appear in the London newspapers on Thursday of each week and feature Friday and Saturday Savings. In the Purdom ad., prices on each line are quoted. The fact that the firm has used this style of advertising for six years is ample evidence that satisfactory results must be forthcoming.

That the T. Eaton Co., one of Canara's largest and most successful merchandising concerns, believes in the use of small electros is shown in one of the accompanying reproduced advertisements. This ad. features a week-end list of tools and hardware. In this case, as in the others, prices are quoted on each line, and descriptions are given. Only a small amount of newspaper space is used, and still a large number of tools are featured. A Hardware and Metal representative visited the tool department of the Eaton Co. on the day mentioned in the ad., and found that as a result of the advertisement there were many inquiries for the goods advertised. The Eaton Co. always make it a practice to have the lines that are advertised in the newspapers, well displayed in the store, so that no time is lost in showing them to customers.

Advertisement of T. Eaton Co., Toronto, featuring a week-end list of tools and hardware. In this advertisement small electros have been used with good effect.

In "MacWilliams' Daily Store News," we see where a large number of kitchen utensils have been illustrated, described and priced. The advertisement occupied only a comparatively small space in the newspaper, but was distinctive and would be noticed by all persons scanning the page on which the ad. appeared. The electros in this ad. are neatly arranged and evenly balanced. In the center of the ad. the 5c, 10c and 15c counters are featured, and a list given of the goods which could be purchased at the above prices.

A well-balanced and attractive newspaper advertisement of T. A. Squire, Brantford, showing how small cuts may be used effectively.

T. A. Squire, hardware merchant, Brantford, Ont., also believes the use of illustrations to be a valuable asset to an advertisement. The accompanying reproduction of the "Squire" ad. shows how 16 electros were effectively used in one advertisement. Each electro represents a different line to any of the others shown, and still all are seasonable. This advertisement was exceedingly well balanced. Note that prices are quoted on all lines.

Hardware and Metal is making a close study of the advertising problems of the Canadian retail hardware trade and hardwaremen will find in this and subsequent issues much practical information and many suggestions.

USING A CATALOGUE IN A RETAIL HARDWARE BUSINESS.

(Continued from page 37.)

to me, so that I am determined that in the future they shall know of everything I carry. Goods must be displayed to sell and as I have not the necessary shelves in my store to show all of my goods, I shall make a further requisition on my paper shelves of printer's ink.

Some of my prices are marked quite low as a result of buying in bulk and for the purpose of bringing people into the store. Once in, they do not usually stop at buying the article that they came for. If a man comes for a lantern that I advertise for sixty-three cents, there is no reason why he should not be instructed in the superior value and advantages of the dollar one. The cheap one will serve to get him in the buying notion and the other one serve to fill his need and make my profit. Or if a man comes for a bargain in paint, I try to sell him a brush or some other accessory before he leaves.

I received one thirty-six dollar order the other day from an outlying township that I have never touched before and which pays for the cost of all the catalogues that went into that particular district.

I could give endless illustrations of such tangible benefits received, for they are continually cropping up. I can sum it all up by saying that the catalogue as applied to my business is the best means that I know of to assist me in my constant endeavor to make each year's turnover larger than the preceding one.

SUCCESS IN BUSINESS.

One great secret of success in business—the secret, in fact, of business on a large scale—is to conceive of it as a matter of principle, not merely as a series of transactions. An eminently successful business man said the other day that the more he understood of life the more clearly he saw that it was all done on business principle. By which he meant not only that the universe stands for the dollar, but that the universe is governed by unvarying laws; that promptness, exactness, thoroughness and honesty are wrought into its very fiber. On these business principles all life is conducted—if not by men, at least by that power which is behind man. It ought to be ambition of every young man to treat his business from this point of view.—Real Estate Record.

Newspaper advertisement of Russill Hardware Co., Toronto, using cuts similar to those now being supplied by Hardware and Metal electro service. The Russill Co. has been following this style of advertising for thirteen years.

Score of Experts on Retail Advertising

Wonderful Gathering Planned for June 21-25 in Annual Convention of Associated Advertising Clubs of America—Stereopticon Views on Styles of Advertising—Details of Valuable Program.

THIS is a message of invitation to every Canadian hardware merchant and ad. writer to participate in the great International Convention of Associated Advertising Clubs of America, to be held at Toronto, June 21-25.

It will be a wonderful Convention in size alone, for the present estimate of attendance is 6,000, and from additional reports coming in daily it is quite conceivable that the attendance may reach as high as 10,000. There will be two or three special trains from Boston, one each from New York, Chicago, Omaha, Dallas, Baltimore, California, and other cities and states. As for Canada, this will be the first time in its history that the annual convention of the A.A.C. of A. has been held outside the United States, and Canadian ad clubs from Halifax to Vancouver are planning to participate in the very great honor of acting as hosts. Montreal has two active organizations which are planning to unite forces and come as one big delegation representing that important centre of advertising enterprise. A most attractive water-trip is a part of the itinerary as arranged at present. There are all sorts of thrillers coming out of the West—reports of special trains from Edmonton, run in conjunction with other specials coming through from the Pacific coast, to say nothing of much special "doings" on the side. Vancouver, Calgary, Lethbridge, Regina, Winnipeg, and other cities will all be represented.

Art Galleries where the Printed and Lithographed Display will be on exhibition.

Will Meet at Exhibition Grounds.

The place of holding the Ad Clubs' Convention is absolutely unique—for it is none other than the grounds and buildings of the Canadian National Exhibition—the world's largest annual exhibition. Considering the type of buildings and the number of them thus placed at the disposal of the Convention, situated as they are in an immense lakeshore park, but only fifteen minutes' ride from the very heart of Toronto, Canadians should feel justly proud that they are to act as hosts to delegates and visitors from all over the United States, Europe, Australia, the Philippines, and other countries.

Showing one wing of the Horticultural Building, where Newspaper Section will meet.

Those who have not visited Toronto recently will find the trip East—or from the East, as the case may be—pleasureable on that account also. Toronto's growth in population during the past ten years has been 138 per cent. and the building and improvements of every kind that have been made during that time, or even during the past five years, are nothing short of marvelous.

A Wonderful Programme.

The first draft of the programme has just recently come to hand from John K. Allen, of the Christian Science Monitor, Boston, chairman of the Programme Committee, and it is a wonder.

Never in the history of all business, it is safe to say, has any business gathering had such a feast prepared for it.

First of all should be praised the completeness, the comprehensiveness of this programme. It touches upon every phase of every subject of importance to those who will attend the convention. It shows the most careful thought and an intimate knowledge of the needs of both buyer and seller of advertising. Every advertising interest will have abundant opportunity for expression, and it is evident that many a long-recognized problem is destined to discover its solution in June.

It is when one considers the speakers secured by Mr. Allen and his associates, however, that the full significance of this program is understood. There are coming to Toronto men of international reputation in their respective lives; men long recognized as absolute authorities, and men well worth coming across

the continent—or around the world, for that matter—to hear.

Apart from a few general sessions of the entire convention the gatherings will be split up into departmental sessions. The man who is interested in the production of newspaper ads. will not be called upon to listen to eulogies of bill-board advertising and discussions as to its improvement and encouragement as a medium for advertising.

For the men who are interested in retail advertising, a separate programme has been provided that will occupy three full sessions, one each on Monday, Tuesday, and Wednesday. These will be held in the Transportation Building, with Manley M. Gillam, of New York, as chairman. Papers will be given by the advertising managers of some of the most successful retail stores in America.

A list of some of the subjects will indicate the nature of the programme and give an index to the great value of the information that will be furnished. There is, for example, an address on Monday at 2.40 p.m. on "Honesty the Most Important Factor in Retail Advertising," by C. L. Brittain, of Kansas City, advertising manager of Klines, a well-known authority on the subject.

"Truthful and Untruthful Advertising as Applied to Business Building" will be handled by George H. Eberhard, president of the George E. Eberhard Co., of San Francisco.

"The Problems of the Small Retail Dealers" is a subject taken up by Harvey R. Young, advertising manager of the Columbus "Dispatch."

manager of Bullocks, Los Angeles, will deal with "The Advertising Appropriation: What to Spend." A former advertising manager of Marshall Field's will treat this subject from the point of view, "Where and How to Spend It," and so on.

This brief summary gives an inkling of the good things in store. For those who are unable to attend Hardware and Metal will report the papers in future issues.

Classical Entrance to Applied Arts Building.

Bird's Eye View of Convention Grounds, with the Press Building in the foreground.

Sample Displays.

Another valuable feature of the convention will be the sample displays of manufacturers for windows and stores, front signs, demonstrations, methods of sample distribution, mail advertising, etc.

A Sunday Gathering.

The Ad Club's Convention opens on Sunday. This in itself is a unique feature of a unique Convention, and to commemorate the occasion the committee succeeded in arranging for a wonderful Sunday afternoon meeting, when the world famed choral conductor, Dr. A. S. Vogt, will be present with his equally famous Mendelssohn Choir. They will render several compositions absolutely new to this continent, which they are preparing for the forthcoming European tour next year. This feature alone would at once make this meeting a notable one, and when it is realized that, in addition, there will be as speakers William Jennings Bryan and others of international reputation, some conception of the treat in store may be had.

The entertainment provided includes a moonlight excursion, a yacht race, a huge carnival of water sports. Wednesday evening will see motor cycle races, military tatoo, and a musical demonstration by nine military bands. This will be followed by a dazzling pyrotechnic display, including the portraits in a blaze of fire of his Majesty King George the Fifth and Woodrow Wilson, President of the United States, while between the two will be crossed flags of living fire—the Union Jack and the Stars and Stripes.

"Ask for it at the Administration Building."

One of the addresses that promises to prove among the most beneficial will be on "Style of Advertising," by Frank A. Black, of the advertising department of the great Boston store of "Filene's." This will be illustrated by stereopticon views.

A subject that is of interest to all will be "Tying up Window Display With National Advertising," by C. J. Potter, of St. Louis.

The advertising

Conference on Retail Advertising

Complete Program for Three Days Devoted to This Subject at Associated Ad Clubs' Convention in Toronto

MONDAY, JUNE 22.

2.10 P.M.—Address: "Where There Is No Vision, the People Perish," by Mrs. Jessie L. Leonard, of Boston, Mass.; secretary of the Boston Women's Publicity Club; advertising and sales manager of the Natural Line Corset Co.

2.40 P.M.—Address: "Honesty the Most Important Factor in Retail Advertising." by C. L. Brittain, of Kansas City, Mo.; advertising manager of "Kline's."

3.10 P.M.—Address: "The Mail Order Field for the Retail Dealer," by C. M. Baird, of Minneapolis, Minn.; advertising manager of the Plymouth Fur Co.

3.40 P.M.—Address: "The Problems of the Small Retail Dealers," by Harvey R. Young, of Columbus, O.; advertising manager of the Columbus "Dispatch."

4.10 P.M.—Address: "Truthful and Untruthful Advertising as Applied to Business Building," by George H. Eberhard, of San Francisco, Cal.; president the George P. Eberhard Co.

TUESDAY, JUNE 23.

8.10 P.M.—Address: "Co-operating with the Dealer to Increase His Sales," by Louis K. Liggett, of Boston, Mass.; president of the United Drug Co.

8.40 P.M.—Address: "Style of Advertising." Illustrated by stereopticon. By Frank A. Black, of Boston, Mass.; of the advertising department of "Filene's."

9.10 P.M.—Address: "Tying Up Window Display with National Advertising," by C. J. Potter, of St. Louis, Mo., of "The Drygoodsman."

9.40 P.M.—Address: "The Future of the Specialized Store," by W. A. Ferree, of St. Louis, Mo., of Nelson Chesman & Co.

WEDNESDAY, JUNE 24.

9.40 A.M.—Address: "The Retail Advertising Appropriation; What to Spend," by W. A. Holt, of Los Angeles, Cal., advertising manager of Bullock's.

10.10 A.M.—Address: "The Retail Advertising Appropriation; Where and How to Spend It," by J. J. Stokes, of Chicago, Ill.; president of the Middle West Advertising Agency; formerly advertising manager for Marshal Field & Co.

10.40 A.M.—Address: "The Retail Advertising Appropriation: When to Spend It," by Walter S. Hamburger, of Baltimore, Maryland; advertising department Hochschild, Kohn & Co.

11.10 A.M.—Address: "The Advance in British Retail Advertising," by George Edgar, of London, Eng.; of the "Advertiser's Weekly."

11.40 A.M.—Address: "How the Educational Work Trains Better Retail Advertising Men."

OVER THE COUNTER PROBLEMS.

In a special article on the programme, Edward Mott Woolley thus deals with the end of particular interest to retail merchants:

"The Retail Advertising group embraces men who come very close to that great general market, the people. "Over-the-Counter" problems that have been solved by local advertising will be analyzed in detail. Shrewd men and successful women have promised to tell the inside stories of their making good. And then the splendid Retail exhibit!

"This display of the retail group will be one of the chief features of the convention. Its purpose is to tie the work of the various departmental bodies to the counters of retail stores, and demonstrate to retail dealers the value of selling products that are nationally and locally advertised; also to show the approved methods of displaying such products, and to give examples of advertising matter supplied by the manufacturers, distributers, etc. Hence manufacturers have been invited to secure space, to install counters and shelves, to display their goods, to make window and store displays of their advertising matter, to show store-front signs, demonstrations, methods of sample distribution, direct mail advertising matter, and so on. In construction, elaborateness of display, and completeness of the showing, this will be one of the most important advertising exhibits ever made. The retail dealers of the United States and Canada are especially invited to see it. Possibly 25,000 people, or more, will accept, if advance interest is an accurate yardstick."

The Truth 

Emblem

Claims Against Transportation Companies

Method of Procedure to Follow in Collecting Claims—How to Prevent Claims—How to Collect Claims—Marking and Packing of Freight.

A HARDWARE merchant at Blenheim, Ont., recently wrote Hardware and Metal asking for some information regarding the method of procedure to follow in making claims against railway companies for damages arising through shortages, breakages, etc. Hardware and Metal has secured a number of important suggestions promulgated by carriers to secure the cooperation of the shipping public, indorsed by the Freight Claim Association, comprising practically all carriers in Canada, the United States and Mexico. The matter will be treated under the following headings: How to Prevent Claims — Marking Freight — Packing Freight—How to Present Claims—How to Collect Claims.

HOW TO PREVENT CLAIMS.

The Bill of Lading.

The bill of lading or shipping ticket prepared by shipper should be on standard form recognized by forwarding carrier; and since freight is forwarded under way bill, which is a copy of bill of lading, shipper should use every degree of care in preparing the bill of lading, making same legible, and observing the following rules:

Name of shipper, consignee and destination must be shown in full.

Whenever there are two stations of the same name in the same state, shipper must designate the county in which station is located.

Date of bill of lading must correspond with date of shipment delivered to carrier.

Articles must be carefully specified according to published classification of freight.

Care must be observed in comparing marks on packages with marks shown on bill of lading.

Marking Freight.

To insure the prompt and safe delivery of goods, it is necessary for the shipper to plainly mark each and every package, bundle or piece of a less than carload shipment, showing this information:

Consignee's name and bill of lading destination in full.

State in which destination is located.

If more than one station of same name in same state, full name of county must be shown.

All previous shipping marks must be obliterated.

If shipment is consigned to order of shipper, notify consignee, the words "order notify" must also be shown on package.

It is a great help to both shippers and carriers when shipper's name and location are also shown, with the word "from" preceding them.

Durable tags must be used when tags are absolutely necessary.

These requirements cannot be given too serious consideration by the shipping public. A member of the Interstate Commerce Commission recently said: "In my judgment it is not only a common law right, but a duty of a carrier, to refuse to receive shipments that are not adequately marked. It owes that duty to itself, and it owes that duty to other shippers who desire to use its facilities and to get a prompt service, relieved of the embarrassment and delays caused by the failure of other shippers to mark their packages clearly."

This expression is sustained by the Act of Congress approved June 18, 1910, amending the Interstate Commerce Law, in the following language: ". . . And it is hereby made a duty of all common carriers, subject to the provisions of this Act, to establish . . . a manner and method of presenting, marking, packing and delivering property for transportation . . . which may be necessary or proper to secure the safe and prompt receipt, handling, transportation and delivery of property."

Packing Freight.

The proper packing of freight is a form of insurance to which the consignee is entitled and which he should require at the hand of his shipper.

The proper preparation of shipments to enable them to withstand ordinary wear and tear of transportation is a

Form for Presentation of Loss and Damage Claims

_____ (Name of claimant) _____ (Claimant's Number)§

_____ (Name of person to whom claim is presented) _____ (Address of claimant)

_____ (Name of carrier) _____ (Date presented) _____ (Carrier's Number)

MONTREAL, QUE. (Address)

This claim for $_____ (Amount of claim) is made against the carrier named above by _____ (Name of claimant)

for _____ (loss or damage) in connection with the following described shipments:

Description of shipment _____

Name and address of consignor (shipper) _____

Shipped from _____ (City, town or station), To _____ (City, town or station)

Final Destination _____ (City, town or station) Routed via _____

Bill of Lading issued by _____ Co. Date of Bill of Lading _____

Paid Freight Bill (Pro) Number _____; Original Car Number and Initial _____

Name and address of consignee (whom shipped to) _____

If shipment reconsigned enroute, state particulars _____

DETAILED STATEMENT SHOWING HOW AMOUNT CLAIMED IS DETERMINED

(Number and description of articles, nature and extent of loss or damage, invoice price of articles, amount of claim, etc.)

Total Amount Claimed

IN ADDITION TO THE INFORMATION GIVEN ABOVE, THE FOLLOWING DOCUMENTS ARE SUBMITTED IN SUPPORT OF THIS CLAIM.*

( ) 1. Original bill of lading, if not previously surrendered to carrier.
( ) 2. Original paid freight ("expense") bill.
( ) 3. Original invoice or certified copy.
4. Other particulars obtainable in proof of loss or damage claimed.

REMARKS _____

The foregoing statement of facts is hereby certified to as correct.

_____ (Signature of claimant.)

§Claimant should assign to each claim a number, inserting same in the space provided at the upper right hand corner of this form. Reference should be made thereto in all correspondence pertaining to this claim.

*Claimant will please place check (x) before such of the documents mentioned as have been attached, and explain under "Remarks" the absence of any of the documents called for in connection with this claim. When for any reason it is impossible for claimant to produce original bill of lading, or paid freight bill, claimant should indemnify carrier or carriers against duplicate claim supported by original documents.

Form used for presentation of claims.

duty which the shipper owes alike to himself, to the customer which he is serving, and whose patronage may be assumed to be valuable to him, and to the carrier who is trying to serve both.

The failure to properly prepare shipments for transportation furnishes a large contribution to claim expense accounts of carriers, as well as delay, expense and dissatisfaction to the shipper and consignee. This would be greatly minimized, if not entirely eradicated, by the exercise of care to see that material of sufficient quality and strength is used in the construction of bags, boxes, bales and other containers, and in the case of goods shipped in straps that the individual packages be securely held in place, having in view the weight of the contents which it is desired to protect.

Shippers should inspect cars to be loaded by them and see that they are placed in proper condition to safely transport the freight with which they are intended to be loaded.

HOW TO PRESENT CLAIMS.

Overcharge Claims.

The following documents should be submitted by claimant in supporting claim for overcharge in rate, classification or weight:

A.—Original bill of lading, if not previously surrendered to carrier.

B.—Original paid freight bill.

C.—Original invoice, attested copy, or such other evidence as may be necessary to prove the rate, weight or classification claimed.

D.—Statement of claimant showing how overcharge is determined with reference to published tariff or other authority for rate, weight or classification claimed.

E.—When for any reason it is impossible for claimant to produce original paid freight bill or bill of lading, claimant should indemnify carrier or carriers against loss by payment of duplicate claim supported by original documents.

F.—The absence of any of these documents should be explained.

Loss and Damage Claims.

The following documents should be submitted by claimant in supporting claim for loss or damage:

A.—Original bill of lading, if not previously surrendered to carrier.

B.—Original paid freight bill.

C.—Original invoice or attested copy.

D.—Statement of claimant showing how amount of loss or damage is determined, with such other evidence as may be necessary to substantiate same.

E.—When for any reason it is impossible for claimant to produce original paid freight bill or bill of lading, claimant should indemnify the carrier or carriers against loss by payment of duplicate claim supported by original documents.

F.—The absence of any of these documents should be explained.

How to Collect Claims.

Honest, frank and hearty co-operation on the part of claimant in presenting claim with proper evidence does much to expedite settlement. The policy of carriers to-day is to establish the validity of a claim and not to avoid liability.

The freight claim agent is bound to live within the scope of the law, and cannot subject himself, his company, or the claimant to the severe fines and penalties imposed by law by paying claims until the facts and measure of legal liability are established. ("It is not the proper practice for railroad companies to adjust claims immediately on presentation and without investigation. The fact that shippers may give a bond to secure repayment in case, upon subsequent examinations, the claims prove to have been improperly adjusted, does not justify the practice.")

Any loss or damage, immediately on discovery, should be reported to the agent of the delivering line, and every opportunity should be afforded him to inspect and verify the same, and in no case should report of this loss or damage be delayed beyond forty-eight hours after receipt of goods.

Delay in making complete investigation is sometimes unavoidable on account of the numerous agencies involved. It must be borne in mind that every claim must undergo some investigation, since reports of loss or damage are not always at the finger tips of the claim department.

Delay in adjusting claims for damages often arises through the refusal of consignee to accept property which has been delayed or damaged in transit. It should be understood that the acceptance of such delayed or damaged property does not in any way jeopardize any proper claim which the owner may have against the carrier; in fact, the law expressly provides that a consignee must accept his own property and use all diligence in disposing of it with a view of minimizing loss.

If a carrier fails to acknowledge receipt of a claim, it is an oversight. In acknowledging receipt of claims the official in charge of the claim department furnishes a claim number under which all correspondence pertaining to that claim is handled, and it would very much expedite the work in the freight claim office if reference was made to this claim number in any correspondence from claimant or on statements of account periodically sent.

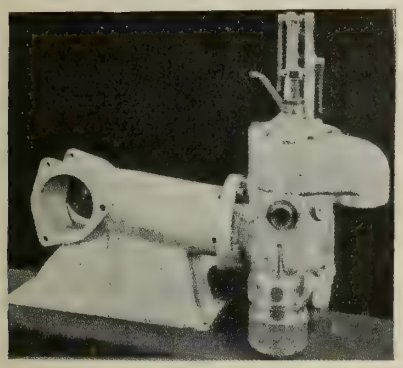
Respecting Loss and Damage Claims.

Before presenting a claim on account of loss and damage, the following important information respecting claims should be given careful consideration:

1.—The terms under which property is accepted and transported by a carrier, as stated on the bill of lading issued by the carrier, also in tariffs and classifications issued or subscribed to by the carrier. Persons intending to file claims should, before doing so, examine the terms and conditions under which property was accepted and transported. If any part of the shipment in question was subject to the regulations for the transportation of explosives and other dangerous articles, prescribed by either the Interstate Commerce Commission or Board of Railway Commissioners for Canada, as the case may be, the person filing the claim should know that all of these regulations applicable to the shipment had been complied with.

2. In order that the carrier may have an opportunity to inspect goods and thereby properly verify claims, any loss or damage discovered after delivery should be reported to the agent of the delivering line, as far as possible, immediately upon discovery, or within forty-eight hours after receipt of goods by consignee.

3. Pending the settlement of any dispute or disagreement between the consignee and the carrier as to questions of loss and damage in connection with property transported, the consignee may avoid a possible accrual of demurrage or storage charges, as well as other loss or damage by promptly accepting the property from the carrier. Such action on his part in no way affects any valid claim which may exist against the carrier.



4. Under the provisions of the Act to regulate commerce of the United States, and of the Railway Act of Canada, the tolls charged by a carrier must be charged equally to all persons under the same conditions, and no reduction or advance in any such tolls must be made directly or indirectly in favor of any particular person or firm using the railway. The refund or remission of any portion of such tolls through the payment of fraudulent, fictitious or excessive claims for loss of or damage to merchandise transported is as much a violation of the law as is a direct rebate or other discriminatory concession. Shippers and consignees are, under the provisions of both acts mentioned, subject equally with the carrier, to the penalties, imposed under said acts, for aiding, abetting or receiving of discriminary or unlawful concessions.

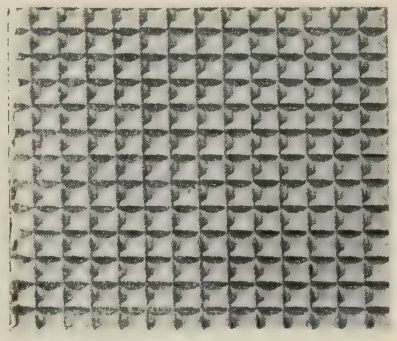
Aluminum Goods in the Hardware Trade

Information Regarding the Growing Importance of Aluminum—A Large Range of Articles Now Being Made From the Lightest Commercial Metal in the World.

Written for Hardware & Metal by Ernest V. Pannell, A.M.I.E.E., of The British Aluminum Co., Toronto.

IN the world of hardware and metal there is probably no material of such growing importance as aluminum. In the hollow-ware industry, the automobile trade, and the field of air-craft construction the use of the metal is a sine qua non, and in numerous other directions brass and copper are giving away to the lightest commercial metal in the world.

Carburettor made of aluminum.

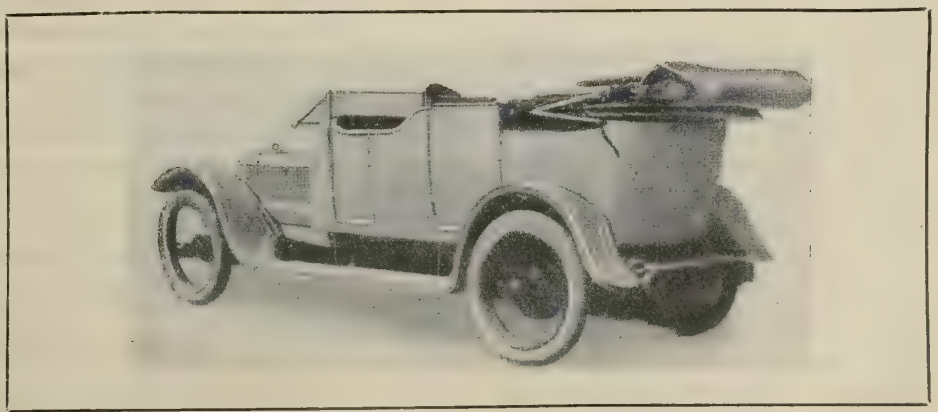


A visit to a fully-equipped sample room of a large firm dealing in aluminum in its various forms will reveal a large and interesting collection of samples illustrating different applications of the metal. The variety comprises a range from a rivet to a radiator. Time is proving the words of Dr. Richards, that "the application of aluminum to the making of culinary utensils will overshadow in magnitude all other applications of the metal." There are reasons for this; for one thing the metal is the same all through and no chipping can take place. In the second place, the metal is proved to be absolutely non-poisonous under the action of all ordinary salts and acids in foodstuffs. So, the use of aluminumware appeals to the Safety First instinct, and this fact, together with the elegant appearance of the metal when polished, is the chief reason for its present popularity. The manufacture of aluminumware is a simpler proposition than that of enameled steel, the metal is so much easier to punch, draw and spin.

Apart from culinary ware, aluminum is now employed for a number of domestic uses. Kitchen cabinet tops are almost invariably of this metal. Door handles, finger plates, kicking plates, stair treads and step-edgings are being supplied in aluminum. For flooring and stair treads the important feature is the non-slippery property of the metal. Most people know that aluminum is the worst thing in the world to make a bearing of, because of its high friction. For the same reason, however, it makes an excellent non-slip step or edging, and the Toronto Railway Company have confirmed this by equipping a large number of their cars with aluminum nosing on the edge of the platform.

The present season is to see a great boom in motor-boating, and some of the Canadian models of speed-craft are fine examples of motor-boat engineering. A noticeable feature is the extent to which aluminum fittings, handrails, cleats and chocks are used. Aluminum matting is extremely popular as a deck covering on account of its being easily cleaned and absolutely fireproof. Sidelight fittings are being cast in aluminum, making a very light and neat fixture the exact model of that used on a 2,000-ton steamship.

Some entirely new uses which are being made of aluminum include corrugated roofing, wire netting and wire cloth. Of course, for these purposes aluminum is more costly than galvanized iron, but it has a far longer life, and is adapted for use in situations where chemical fumes are present, and where no other metal could be employed. One of the most remarkable features of aluminum is the manner in which it resists chemical action; aluminum piping is being satisfactorily used for conveying the liquids produced in leather factories and paper mills. In gas works and ammonia plants the metal is also employed very largely for roof nails and other details. Nails and screws of all ordinary stock sizes are to be obtained in aluminum, whilst a still larger trade is done in rivets. Aluminum rivets are very soft and easily headed up. They are extremely useful for the thousand-and-one domestic purposes, such as repairing a leather strap, small metal articles, etc., and several hardware stores are carrying a line of these in stock.



It is becoming recognized that aluminum in various forms is a useful line for hardware dealers. Constant inquiries are being made for aluminum matting for automobile repairing,

View of a section of aluminum tread.

sheet for table tops, nails and rivets, wire, screws and many other forms of the metal.

Hector St. Aubin, who was employed in the sales department of Caverhill, Learmont & Co., Montreal, for the last five years, was the victim of an accidental drowning at St. Rose, Que., on June 6th. He was in bathing with friends and got beyond his depth. He was 20 years old, and lived at Dorval. He was well liked by all who knew him, and was looked upon as a young man of considerable promise in the hardware business. The body was recovered, and funeral was held from his home in Dorval. A floral tribute was sent from Caverhill, Learmont & Co.

Proper Marking of Foreign Goods

An Item of Interest to Importers

ATTENTION was called in a recent issue of Hardware and Metal to an article in the customs regulations dealing with the proper marking of goods imported into Canada from foreign countries. It has been learned that a number of Canadian dealers have been put to considerable trouble and not a little expense through ignorance of the regulation. As it is possible that some of our readers overlooked this particular item, and in view of the important bearing it has on the purchasing of certain lines, we quote the section again. It appears under Schedule C, Article 1209, of the customs regulations and reads as follows:—

"Any goods—(a) which, if sold, would be forfeited under the provisions of Part VII. of the Criminal Code, or,

"(b) Manufactured in any foreign state or country which bear any name or trade mark, which is or purports to be the name or trade mark of a manufacturer, dealer or trader in the United Kingdom or in Canada, unless such name or trade mark is accompanied by a definite indication of the foreign state or country in which the goods were made or produced:

"Provided, that for the purposes of this item, if there is on any goods a name which is identical with or a colorable imitation of the name of a place in the United Kingdom or in Canada, such name unless it is accompanied by the name of the state or country in which it is situate, shall, unless the minister decides that the attaching of such name is not calculated to deceive (of which matter the minister shall be the sole judge), to be treated as if it was the name of a place in the United Kingdom or in Canada."

It appears that while this regulation has been in existence for many years it has not, until very recently, been enforced. The meaning of it in short, is that goods which have been made in say Germany or Austria, must be marked "made in Germany," or "made in Austria," so that they shall not appear as the product, for instance, of Great Britain.

To take a specific case for example, say a package of cutlery, which has been made in Germany, and which is put up with a label printed in English, bearing the name of a presumably British firm. If this package did not contain the words "made in Germany," or some similar line to indicate the country of origin, it would be liable to seizure by the customs authorities.

It has been learned that one dealer who bought an order of goods, in good faith, not knowing of the existence of this regulation had a consignment seized after he had paid the duty. He was subsequently allowed to send the goods back to the manufacturers, where the necessary change in label was made and the goods returned here, but the dealer was out the duty he had paid on the order in the first instance, as he had to enter them the second time in the regular way.

The merchant who orders goods in any foreign country, marked with his name or trade mark, or the name or trade mark of a real or fictitious firm, must have the name of the country in which they have been made also marked on the goods and on the packages. If the goods are made in the United States they must bear the mark of the United States, if they are made in Germany they must bear the name of Germany. Merchants would do well to specify when ordering that the name of the country be plainly marked on the packages and goods in addition to any other marking there may be.

Prescott, June 15th, 1914.

Mr. G. D. Davis,
Editor Hardware & Metal,
143 Union Ave.,
Toronto, Ont.

Dear Sir:

With reference to the matter of the proposed affiliation of the Ontario Retail Hardware & Stove Dealers Association and the Retail Merchants Association, this matter has received the best attention of the Advisory committee of the Hardware Association, and, inasmuch as the matter has only been discussed, so far, between the officers of the two Associations, the Advisory committee did not deem it advisable to ask our Association for a vote on the proposed affiliation, until the matter could be laid before them in open Convention and each member have an opportunity of discussing the subject and giving an intelligent vote, after due consideration. It would be impossible to make the matter sufficiently plain in a circular letter, and we have considered leaving the matter in abeyance until the Convention to be in the best interests of the Hardware Association.

The Committee would be only too glad to receive views from the membership at large, which might enable them to have the matter in a more definite shape for consideration at the annual Convention, when it will receive a prominent place on our program.

Yours faithfully,

W. F. Macpherson

President O. R. H. & S. D. A.

Letter from President Macpherson outlining action of Advisory Committee of O.R.H. & D.A.

Talks of a Selfmade Merchant to his Clerks

Neatness is One of the Most Essential Points in the Accoutrement of the Man Who Wishes to Succeed.

By Byron J. Morrow.

I'M going to talk of a personal topic to-day, boys, said the Boss. You've all heard that old saying "Clothes don't make the man." I want to say right here that I wish whoever started that proverb going had been suffering from a mild attack of tetanus or writer's cramp on the day the immortal thought struck him. A lot of immorality, sedition and laziness has been bred by certain of these old proverbs, wise saws and so forth that men are so fond of rolling off their tongues. You can find proverbs to excuse you in any form of deceit and villainy. Proverbs, like texts, can be twisted to make excellent excuses.

But I don't know of any that annoys me so much as this one about clothes. I remember how it used to affect me when I was young. I accepted it as a justification for laziness. When the weighty question of blacking my boots or leaving them unblacked would come up I would decide on the masterly policy of inactivity and feel more or less virtuous and elevated over it "Clothes don't make the man," I would say to myself. "Men who bother about dress are fops. It's what's underneath that counts. The rough man with the sterling qualities is the one who gets along, not the dude."

That sort of reasoning makes a virtue out of laziness.

Now I want to make this point clear. No man can make a complete success who does not have due regard for his personal appearance. Neatness is one of the most essential points in the accountrement of the man who aims to succeed. You've probably heard it said that such and such a great man pays no attention to personal appearance. But don't put much stock in such stories. The chances are that they are entirely wrong or grossly exaggerated. Certainly the great man mentioned has acquired his indifference to personal appearance since achieving his success. He would not have proceeded very far on the high road to fortune if he had tried to make the trip in the guise of a tramp. Disreputable looking parties are soon ordered off that road.

And this is the reason. There are few lines in which a man works independently. In ninety-nine cases out of a hundred, a man succeeds or fails through the success or failure that he scores in his relations with other men. We are all salesmen here and the success that we each have depends upon how well we can apply what we know about salesmanship to the customers that we meet. Personality is just about fifty per cent. of salesmanship—if not more. The impression that we make on the person we aim to sell to goes a long way to selling the goods—or else crabs the deal for us.

Is there any spectacle that excites scorn or compassion faster than that of a man with several days' growth of scrubby beard, a dirty collar and muddy shoes? Confronted with a specimen of this kind, you can feel no respect for him. You feel that no matter how busy or poor he may be, he could present a better appearance if he took any interest in the matter at all. His slovenliness shows that he doesn't give a continental what people who meet him may think; in other words, he doesn't give a rap for your opinion, good or bad. Personally I never see an unshaven chin without feeling a desire to bring my fist in conjunction with it.

Can a man who looks like a tramp make enough impression on you to sell you anything?

No man is a salesman when he has a thick stubble on his cheeks or a muddy pair of boots on his feet. And the reason is this. He lacks that supreme confidence, that utter lack of self consciousness which is gained only when a man knows he is above reproach in the matter of his personal appearance. What a new feeling a man has when he has donned a suit that is newly pressed and shoes with mirror-like powers of reflection. He knows that he looks right; and consequently he feels right. But when you know that your trousers bag at the knee, that your shoes are down at the heel and that the lower half of your face presents grounds of belief for the theory of evolution, you can't help but feel apologetic and uncertain. You are at a disadvantage in meeting other people.

I'm telling you this because I've noticed evidences of carelessness on the part of certain members of this staff. Don't limit your acquaintance with razors to selling them—use them, every morning. How can you expect to sell shoe polish to customers when your own pedal appendages show the fact aloud that you don't use yourself what you are recommending.

But perhaps the chief fault to be found is not so much in lack of attention to the clothing question but too much attention. One or two members of this staff—I'm not mentioning names—have gone to the other extreme. I don't know just which I think is the most objectionable—the sloppy, careless dresser or the extreme dresser. The first arouses antagonism but the second wins contempt. When you see a fellow with a hat that must have been designed by a paranoic with a taste for the grotesque, a tie that would delight a demented cubist and a pair of salmon colored boots—buttoned — with cream colored cloth tops, you know at once that his hat is a 6 and ⅜ and that the space inside his cranium isn't overcrowded at that.

I went into a bookstore the other day and up bustled a young fellow fairly burning with the desire to sell me everything in sight. He was a good salesman alright; talked well but not too much, knew his goods and had my requirements sized up to a pin point. But he had one weak point. In some moment of weakness the thought had occurred to him to do his hair in a distinctive way. It was distinctive alright. He let it go long and then stood in right up in front. For five inches it stood up from his fore-

(Continued on page 53.)

New Goods Offered Canadian Hardwaremen

GARAGE DOOR HOLDER.

The Stanley Works, New Britain, Conn., are offering to the Canadian trade the Stanley 1775 Garage Door Holder here illustrated. The makers claim the following:

The Stanley door holder is protected by the building whenever the doors are closed and it is not apt to become deranged by snow and ice. Sometimes

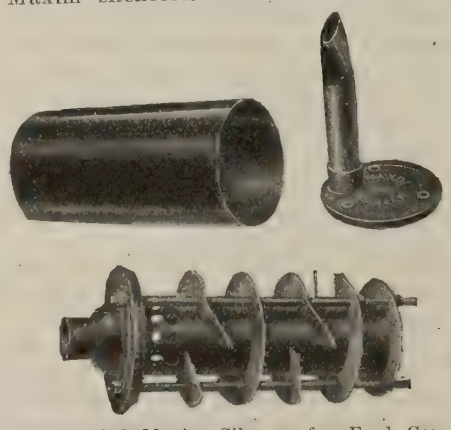
The Stanley 1775 Garage Door Holder.

the snow will drift around the outside of the building and if you depend on posts set in the ground for holding the doors back, you will always have trouble taking the snow away. The Stanley No. 1775 is always in a safe position and does not depend on external appliances. It cannot be blocked by snow and this absolutely does away with the idea of gumming up.

Strength: It is applied at a substantial distance from the hinge so that it has a considerable leverage on the door. Unlike other devices which have been used for holding doors and windows open, which were applied near the joint, it is well adapted to withstand any abuse or misuse, on account of its position on the door itself.

Its practical automatic action: No one has to give it a thought, the mere act of throwing the door open hurriedly will set the device in action and it takes care of itself. In closing the door, it is only necessary to catch hold of the thumb ring and a slight pull will not only release the lock on the side but will pull the door shut as well.

It is never in the way. The automobile goes in with the top up and there is practically as much clearance as before the holder was applied. It is not noticeable and yet it is on the job all the time.



It is very easily applied and no mortising is necessary. Dimensions are: Weight, 9 lbs.; length, open, 48 inches; closed, 27½ inches.

SILENCER FOR FORD CARS.

The Maxim Silencer Co., Hartford, Conn., is offering the Canadian hardware trade a Maxim silencer for Ford cars. It is said by the makers that Mr. Maxim has applied the same principle to the Ford motor that he has applied to the rifle in producing the gun silencer. The manufacturers claim that by fitting the device to a Ford car, it becomes the equal of a high priced motor in quiet-running efficiency. The noisy, annoying, unending "chug-chugging" becomes a thing of the past. The back pressure on the engine is decreased, thereby giving greater power and consuming less gasoline. Actual tests are said to have demonstrated that the muffler causes 1-3 more back pressure than the silencer. The silencer-equipped car can get away quicker, climb hills better and is more efficient in every way.

The illustration herewith shows the silencer disassembled. The gas from the exhaust enters the silencer at A and expands immediately in the expansion chamber C. The outlet from this expansion chamber is at C, which (as can be seen) gives a suctioning effect to the gas.

After leaving the expansion chamber through these holes at C, the gas begins its passage through the peculiar whirl chambers which are characteristic of all Maxim silencers. These chambers are

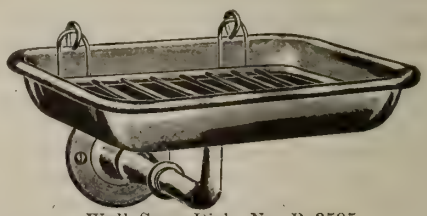
Disassembled Maxim Silencer for Ford Cars.

formed by using three segments made from 1-16 inch thick sheet steel. The segments are separated from each other at the joints so as to give circumferential discharge. The next chamber, although constructed in exactly the same manner, has its discharge spaces in the reverse direction. Thus is secured a whirl in the space E between the two chambers. At the end of the first segment F, the gas—or more accurately, the noise wave—is divided into halves, one-half passing into the next chamber where it is in turn divided into halves, and so on from one chamber to the other until it is gradually dissipated.

The silencer is furnished complete with brackets and tail pipe ready for attaching. Anyone can attach it quickly and easily. All that is necessary is to remove the regular muffler and replace it with the silencer. It's an easy job which can be done in a few minutes.

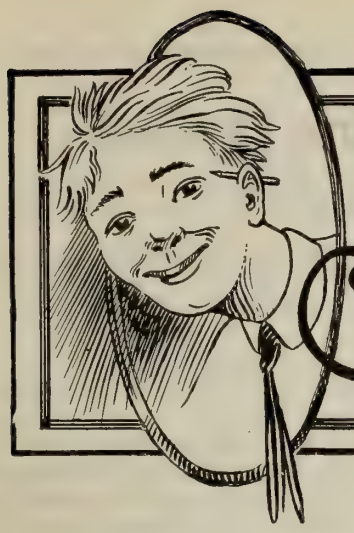
NEW BATHROOM FITTINGS.

The American Ring Co., Waterbury, Conn., has recently placed on the market a number of new patterns in bathroom fittings, including the following: No. B3190, a combination tumbler holder and tooth brush holder, the little



Combination Toothbrush and Tumbler Holder, No. B 3190.

rings around the base of the tumbler holder, holding the brushes suspended. B3595 is a wall soap dish with a removable drain, which can be easily cleaned, and at the same time is said to keep the soap in good condition.



Wall Soap Dish, No. B 3526.

B3526 is another variation of the wall soap dish, the removable plate or tray serving the same purpose as the drain in B3595. This tray sets flush with the top, and is removed by the holes in the center, which also drain off

Wall Soap Dish, No. B 3595.

the water. All the goods are made of solid brass and are polished and heavily nickel plated in order to get the best finish possible. They are packed complete with screws.

THE JUNIOR CLERK'S PAGE

THE RISE OF BILLY.

BILLY had reached his sixteenth birthday. His father was a business man of more than average ability, who had made good in the country town. His ambition had been to give each of his children a good start in life. One was a teacher of unusual merit. Another had entered upon a fine professional career. Billy had been kept in school in the hope that one day he would enter partnership with his father or pass on to the law school. On this particular morning he approached his father.

"Dad," said he, "I'm tired of school. Brown & Peters have advertised for a boy to learn the hardware business. I was down to see them last night and if you have no objections I'll begin today."

So Billy began. His wages were four dollars per week. Out of this he agreed to pay his mother two dollars per week for board and washing. The remaining two dollars were to keep him going in all other respects. At the end of the year he banked forty dollars.

Brown & Peters had not spared him. There was not a minute for soldiering. It was, "Billy, do this," all day. But the faster Billy ran the better he seemed to like it. No job was better liked by him than that of dusting and arranging the goods. By the end of the first year he was familiar with every article and its price that the big store contained. The second year his wages were advanced to six dollars per week. His board bill rose to three dollars per week. His personal expenses were kept as near the old mark as possible.

Billy was not contented to study the store alone. He made up his mind to know the customers. It was his delight to get his lady patrons talking about their kitchen equipment. He was astonished to find how women were really satisfied with their stoves. When he found a dissatisfied woman it was fun for him to be invited to inspect it. In many cases he was able to set everything right in a few minutes. There were no tips in this for him, but the customer was found inquiring for Billy the next time she came to the store. Further, it was found that Billy soon knew more about stoves than any other clerk on the premises, and by the end of the third year Billy was placed at the head of the stove department, and his firm soon had the lead in the stove trade in that part of the province. Still another line suggested itself to Billy. Why not go after the farmers for their binder twine? In spare hours he was out on the farm. He won the confidence of these customers. He studied their needs in this respect, and induced his firm to buy none but the best of twine. He had found out that there is nothing that will put a farmer in worse humor on a fine day in harvest, when the grain is ripe to the shelling point, than to be held up by twine that will not run or that breaks frequently. A cent or two on a ball of twine was a trifle in comparison with the injury done a field of grain. When he encountered a farmer whose heart was hot for such a reason Billy was ready to suggest a trial bag of his particular brand. By the end of the second season Billy's firm had the lead in binder twine. The brand sold was one of the best in the market, and Billy knew the men worth selling to.

While not neglecting any feature that he had previously mastered, Billy added new features as time or opportunity offered. He studied hardware and customers as a first-class lawyer prepares his brief. At the end of the fifth year Billy's salary was $800 per annum. During the ninth year Peters died, and Brown invited Billy into his office. "What do you say to taking a share in the business? I'll give you a third interest, and you need not invest a dollar." And so the deal was closed.

That was twenty years ago. Last year Brown passed to his reward, and Billy was ready to take over the whole business. The firm now is Billy. And a mighty good firm it is. Billy began with the overalls. In them he learned the business from its practical side. He learned the quality of goods by handling and studying them. He came into a first-hand knowledge of his customers and their requirements by personal, every-day contact with them. He learned to look at the goods from the customer's point of view. He learned the worth of a dollar by being obliged to make it go as far as possible. He has his auto now, but to this day he is as willing as ever to carry goods or to look over a rebellious stove or water pipe.

It seems a far cry from the little lad who swept the store and was given all the extras in the way of hard work and unpleasant jobs, to the merchant prince, who can be member of parliament by holding up his finger, but Billy sees nothing unnatural or wonderful in it. It was simply a matter of finding his gait and keeping on till there was nothing in his job that he had failed to master.

TALKS OF A SELF-MADE MERCHANT TO HIS CLERKS.

(Continued from page 51.)

head like the bristles of a porcupine and then the frayed edges dipped backward. The general effect was like a cornfield in a windstorm. That hair arrangement fairly hypnotized me. I couldn't help speculating as to how he happened to get by with it, how he managed to make his hair behave that way and what his boss thought of it. His arguments went in one ear and out the other. I bought what I had gone in to buy but nothing more.

There's no getting away from the fact that the salesman's personality helps in the making of sales but as far as possible it should help by being unobtrusive. Don't let your customer think of you; make him think of the goods.

I'm hoping you boys will think this clothes question over carefully. It's an important one for every man, particularly the salesman.

Current News of the Hardware Trade

Business Changes.

Prussia, Sask.—E. M. Krienke, hardware, has been succeeded by Gryde & Marshall.

New Firms.

Toronto. Ont.—The Wizard Produce Company, of Chicago, Ill., will open a branch office on Sorauren Ave. in this city in the near future.

Fire Losses.

Atlin, B.C.—J. B. Kershaw, hardware, has been burned out.

Winnipeg, Man.—Lighting Systems, Ltd., have suffered a fire loss.

Winnipeg, Man.—Goldie & McCullough Co., have suffered loss by fire.

Joins Martin-Senour Staff.

Tom Flitcrof, formerly manager of the hardware department of Stanley Mills & Co., Hamilton, has joined the sales staff of the Martin-Senour Co., and will represent the latter firm in Eastern Ontario.

A. T. Black, who formerly covered the Eastern Ontario territory will in future be located at the head office at Montreal, and will be connected with the sales promotion department.

Industrial.

Fort William, Ont. — The recently completed plant of the National Tube Company, has started up with a force of fifty men. During the present month fifty more will be added to the force and if conditions warrant it, the force will be doubled later on.

Ontario Incorporations.

British-Canadian Film Company, organized to manufacture, sell and deal in apparatus and machinery of all kinds and to provide for the production of, to produce, buy, sell and deal in moving pictures, phonographs, etc. Capital, forty thousand dollars; head office, Toronto.

T. J. Campbell Company, Limited, organized by T. J. Campbell, H. J. Thompson, Francis G. Campbell, F. W. Grant, and Jesse Allen, to carry on the business of hardware merchants and electricians, and to do plumbing, heating, sheet metal and electrical work of all kinds. Capital twenty-five thousand dollars; head office, Midland, Ont.

Canadian Detroit Steel Products, Ltd., organized to manufacture, buy, sell and deal in iron, steel and other metals and metal products. Capital, forty thousand dollars; head office at Windsor, Ont.

Fibre Boxes, Limited, organized to manufacture, buy and sell, etc., boxes of wood, paper, tin, galvanized iron and other material. Capital to be forty thousand dollars; head office to be in Toronto.

Dominion Incorporations.

Anti-Nico Co., Ltd.: organized to buy, construct and sell and otherwise deal in machinery, machinery supplies and mechanical appliances, etc. Capital stock, ten thousand dollars. Chief place of business, Montreal.

Canadian General Fire Extinguisher Company, Ltd., organized to purchase and manufacture all such articles as go into the making of fire protective apparatus. Capital stock, one hundred thousand dollars. Chief place of business, Toronto.

The Stockwell Motors, Limited, organized to manufacture, sell, buy, lease, etc., in all kinds of vehicles, automobiles, auto trucks, cycles, bicycles, etc., and in motor engines and other appliances for supplying motor power to vehicles. Capital stock one hundred thousand dollars. Chief place of business, Montreal.

Western Notes.

Speers, Sask.—McRae Bros., have opened up a new hardware store here.

Saskatoon, Sask. — The Saskatoon Hardware Co. have again opened their store on Second avenue.

Calgary, Alta.—J. H. Mercer, formerly with the Hanbury Hardware Co., of Brandon, Man., has been appointed city treasurer of Calgary.

Highland, Alta.—R. A. Stewart has taken over the business of E. A. Thompson & Co., hardware and furniture.

M. F. Christie, managing director of the G. F. Stephens Paint Co., Winnipeg, celebrated his fiftieth birthday recently.

Thomas Walsh, Watson, Sask., was married in Winnipeg on June 10. He is a well-known hardwareman in that town.

George M. Christie, Calgary manager of the G. F. Stephens Co., passed through Winnipeg this week on his way East with the Alberta business men's excursion.

F. Morton Morse, president of the Miller-Morse Hardware Co., Winnipeg, has recently completed a motor tour through the Chateaux country, France. He is sailing for home on July 1.

W. O. Labelle and G. A. Thompson have bought out the business of J. H. Williamson, Alix, Alta. Mr. Williamson sold out in a hurry and went East to join his wife, who is ill. Mr. Labelle is a traveler for the Miller-Morse Hardware Co. in the Alix district, and will still retain his position with that company. Mr. Thompson, who was clerk in the store, will now be in charge of the business.

Personals.

Toronto, Ont.—James Taylor of The Geo. Taylor Hdwe. Co. of New Liskeard, Ont., was an out-of-town buyer this week.

So. Porcupine, Ont.—H. M. Joy, the South Porcupine hardware dealer, has been confined to his Toronto home by illness.

Pembroke, Ont.—E. A. Dunlop, of the hardware firm of Dunlop & Co., former Conservative member from here, is again the nominee of his party for a seat in the Provincial House.

A. W. Peck, jun., of the Stanley Rule and Level Co., New Britain, Conn., and Mr. Springer, of the Springer Lock Mfg. Co., Belleville, Ont., were calling on the trade in Montreal this week.

J. W. Richardson, buyer for Caverhill, Learmont & Co., Montreal, has returned from a vacation trip in Ontario. While he was away Mr. Richardson attended the sessions of the Presbyterian General Assembly at Woodstock.

L. R. Greene, advertising manager of Sherwin, Williams Co.; J. W. Sadler, of Sadler & Haworth, and Edmund Doremus, of Dominion Cartridge Co., Ltd., are among the Montreal hardwaremen who will attend the Associated Advertising Clubs' Convention in Toronto next week.

W. T. Grose, manufacturers' agent, Montreal, was instantly killed last evening by being thrown from an automobile. With two other men, Mr. Grose was returning to Montreal in a touring car, after a holiday excursion, and when about two miles from Napierville the car skidded into the ditch and threw the occupants out. Mr. Grose was killed instantly, and the other men were very seriously injured, but are expected to recover.

Mr. Grose was very well known in the hardware trade as the representative of C. O. Clarke & Bro., manufacturers of sleigh bells, and Gawen, Gilmore & Co., manufacturers of auger bits, Cote St. Paul, Que. He was a brother of the late Walter Grose, who was well known as handling the business of the Ontario Lantern and Lamp Co. and Nicholson File Co. Some years ago Mr. Grose was employed in the warehouse of Caverhill, Learmont & Co., Montreal, and he will also be remembered as manager of the Sun Manufacturing Co., makers of sleigh bells. He had a host of friends, and was generally popular.

Weekly Report on Market Conditions

Statements From Buying Centres on Prices and the Trend of Demand—Full Reports Dealing with Hardware, Metal and Stove Lines.

THE MARKETS AT A GLANCE.

The approach of the holiday season and the recent cool weather has had a tendency to cause a slackening in the numbers and size of orders. Very few price changes occurred during the past week. Turpentine has advanced following the advances in the South. Merchants generally are observing caution in making purchases, and stocks in the retailers' stores are comparatively light. The metal markets are still very weak and business is of a hand-to-mouth character. May business was in many instances below the volume recorded during the corresponding month of last year. Business so far this month compares favorably. The carpenters' strike at London is still on. The paint trade was extremely busy during May, but a slackening is now noticeable.

MONTREAL.

MONTREAL, June 18.—Orders have been coming in steadily, and the volume of business up to the present time this year is regarded as very satisfactory. While in many instances orders have been small, they have been frequent, indicating that dealers are not stocking up heavily, but are buying cautiously and only in sufficient quantity to meet the demand. This is regarded as a hopeful sign in view of a rather tight money condition. Collections have been fairly good, in fact are showing some improvement, and it is thought that with good crops business will assume a more brisk attitude. One jobber in writing to his salesmen last week, commented on the likelihood of satisfactory crops, but suggested that retailers should not be urged to buy too heavily until the outlook was more assured. Present reports are considered very good, as crops are stated to be in good shape, with the exception of the Niagara peach crop, which, it is said, will likely fall below the average. There has been no change in prices of importance, but the majority of the markets, with the exception of metals, are fairly firm.

Summer Goods.

There has been an active demand for all kinds of summer goods, and repeat orders are being received daily for such lines as garden hose, lawn mowers and rollers, sprinklers, ice cream freezers, refrigerators, hammocks, window screens and doors, etc., etc. Jobbers report also that such lines as apple parers and corers, corn hooks, and harvesting tools are showing activity.

Wire.

Some interest is being shown in annealed cut hay baling wire, and prices quoted are as follows: No. 9, $3.75; No. 10, $3.80; No. 11, $3.90; No. 12 and 13, $4; No. 13½, $4.10; No. 14, $4.25; No. 15, $4.50; in lengths 6 inches to 11 inches, discount 30 per cent.; other lengths 20c 100 lbs. extra; if eye or loop on end add 25c to above figures.

Metals.

Weakness is still the outstanding feature of the metal markets. It appears to be difficult to say just what the cause of this extreme condition is, but in discussing the situation with a man who keeps closely in touch with every move in the market, he stated that it would probably be some little time before any marked improvement was realized. The principal changes noted this week are in tin, which is now quoted at 37½c, as compared with 40 to 40½c the previous quotation, and sheet zinc, which is now quoted at $6.75 in casks, and $7 in small lots. Lead is back at $5.10 again. Other quotations are: antimony, $8.50; spelter, $6, and copper, $16. Ingot brass, red, is 14c lb.; ingot brass, yellow, 13c lb.; tinkeds' bar solder is 28c; wire solder, 25½c; half-and-half, 24½c, and wiping solder, 20 to 30c.

Bar Iron.

Market on bar iron is quiet at present and there has been no change in quotation, which is still $2.05 base, Montreal.

Nails and Screws.

There is no change in quotations on wire nails, which are still quoted at $2.25 base, Montreal, and cut nails, $2.50 base, Montreal. Demand is fair and market firm at these prices. Screws are unchanged in price, also rivets and burrs.

Lead and Lead Waste Pipe.

Though the pig lead market has been firmer lately, prices on lead and lead waste pipe have not changed and the former is selling at 7½c and the latter, 9c, with discounts of 7½ per cent.

Rope, Twine, Etc.

Business continues good in cordage lines, especially in binder twine. The demand has been quite steady all along and the year thus far is regarded as satisfactory. Prices have not altered and remain as follows: Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are: Best Manila, 650 feet to pound, 13½c; Manila, 600 ft, 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

Stoves, Ranges, Etc.

Business has been good for the time of year and there has been a steady demand for gas stoves. These will no doubt continue to sell well in view of the reductions being made in the cost of gas. Oil heaters and oil stoves have not been moving quite as freely during the last week or two, but this is regarded simply as a temporary lull. Furnaces are selling fairly well and there will doubtless be quite a demand a little later on, as residential buildings now under construction near completion.

TORONTO.

TORONTO, June 18.—There has been a slight decrease in orders from last week. The recent cold weather has lessened the demand in summer goods. In most lines the June business to date equals that of 1913, which is more than can be said of business in the month of May. Collections remain fair, there being comparatively few complaints on this score.

Metals.

There have been no changes in the local metal market during the last week. Tin is still selling at 33½c, after its ½c gain from the recent drop. Domestic lead continues very firm at $5.15 and over. Copper is unchanged at 15c to 16½c lb.

Purchases continue to be made in small lots and are of a conservative nature. Prices on other metals are as follows:—Antimony, 8¾c to 9c lb.; zinc, 5½c to 6c lb.; ingot brass, red, 13c to 15c lb.; ingot brass, yellow, 12c to 14c lb.; half-and-half solder, 24c to 26c lb.; pattern aluminum, 22c to 24c; ingot aluminum, 18½c to 19½c lb.; acme solder, 18½c lb.; easy wiping solder, 19½c lb.; star extra, 21¾c lb.; wire solder, 26c lb.; tinkers' bar solder, 27c lb.; lead wool, 8c lb.

Nails, Screws and Rivets.

Prices are unchanged in these lines. Wire nails are still firm at $2.25 base, and cut nails at $2.70. Manufacturers complain that the price is still much too low to enable them to make a profit.

Rivets and burrs are still 35 and 12½ off, and are in greater demand than nails, as are screws also.

Rope, Twine, Etc.

There is a fair demand in these lines, although it is not so good as it was at this time last year. Low prices at that time induced people to stock up, whereas now they buy only what they need.

Oakum, waste and binder twine are the leaders in demand. A possible shortage in binder twine is worrying American dealers. Conditions promise a larger demand in the States, but is partly offset by the fact that a large stock was carried over from last year.

Prices here are still from 9¼c for 500 feet per lb. to 13½c for 650 feet per lb.

Pure Manila rope isc 15c base, British manila 11c base, African hemp 11c base, and sisal 10½c base.

Stoves, Etc.

Stoves are still selling briskly, in such lines as gas ranges, oil stoves, etc., but demand has slackened slightly during the past week. The sales of the last six weeks do not total those of the corresponding period in 1913, but there can be no fair comparison between the two. The recent cold weather had a great deal to do with the smaller demand in summer stoves. The call for enamelware is only fair.

Summer Goods.

Summer goods and seasonable stuff generally are the leaders in Toronto in general hardware lines. In addition to a good demand for screen doors, etc., the call for harvesting tools, forks, etc., is beginning to be noticeable. The late cold weather has somewhat lessened the sale of household seasonal goods, for there is no doubt that summer goods in general are the most sensitive of any to weather conditions.

Cement, Fire-Brick, Etc.

Cement is unchanged at $1.85 for less than carload lots, and fire-brick of all varieties is the same as per current market quotations. Demand in cement is good.

LONDON.

LONDON, June 17.—Summer goods are still in good demand, although some lines have slackened up a little owing to the recent cool weather. The carpenters' strike still continues, and if not ended soon many people contemplating building this year will not do so. This will decrease the sale of builders' hardware here considerably. The only price change during the past week was an advance in the price of turpentine, which is now quoted:

1 barrel lots ....69c per Imperial gal.
2 to 4 barrel lots..68c per Imperial gal.
Less than barrels..76c per Imperial gal.

Linseed oil is quoted as follows:

Raw—
1 to 2 barrels ..... 63c per 9 lbs.
3 to 5 barrels ..... 62c „ „
6 to 9 barrels ..... 61c „ „

Boiled—
1 to 2 barrels ..... 66c per 9 lbs.
3 to 5 barrels ..... 65c „ „
6 to 9 barrels ..... 64c „ „
10 barrels and over, open.

Wire, Nails, etc

Nails are only in fair demand at $2.25 base for wire and $2.70 base for cut. Rafter hooks, 12 in., are selling at 60c per dozen, and rafter brackets at 50c per dozen.

Rope, Twine, etc.

Jobbers are having a good demand for hay fork rope at the following prices:

Pure Manila ..... 15c lb. base.
British Manila ..... 11c lb. base.
African hemp ..... 11c lb. base.
Sisal ....10½c lb. base.

Sash cord—No. 6 is quoted at 30½c lb.; No. 7 at 29½c lb.; No. 8, 9, 10, 12 at 29c lb.

Cotton wrapping twine in 5-lb. bags or cones is quoted at 28c lb. for 3-ply and 31c lb. for 4-ply.

WINNIPEG.

WINNIPEG, June 17.—Rain fell in Southern Saskatchewan and Alberta recently, which gave new life to business. Reports of travelers for jobbers, which hitherto had been of a most gloomy nature, took on a new tone, and their orders likewise. The result is that in the hardware business things have been looking better for the month of June. This applies to the whole of the West, and not to any one district in particular. Still, there is a disposition for merchants to buy in a hand-to-mouth fashion, and to leave their big sorting orders until later on.

There is this about it, though, which merchants will do well to consider, that if the crop turns out as well as expected, there will be as big a demand in July and August as there was in 1912, when everybody was tied up., Whereas it may be good policy to delay buying until the crop is more assured, this phase of the situation must be considered. Jobbers warn that it will not be much use marking orders "rush" when the rush does come, for things will be so tied up it will be very difficult to secure deliveries.

Thresher Supplies.

Orders are beginning to come in for thresher supplies. As there is a big demand for this class of goods during July, merchants are beginning to order such lines as steam-fitting supplies for traction engines, including brass valves, injectors, steam gauges, pipe fittings, spark plugs and dry batteries for gasoline engines, sheet packing and piston packing, rivets, oil cans, lubricating oils and greases, traction engine head lights, grain scoops and feeder forks. There is also a demand at this time of the year for small tank pumps, selling from $7.50 to $10. There is also a good demand for suction hose and belting.

Nail To Go Up.

A change in the price of nails for Western Canada may be expected daily. Manufacturers in the East have raised their price 15c per keg, and it is expected that Winnipeg jobbers will make their price $2.45 for the head of the lakes, as it is claimed that nails cannot be sold any cheaper. In view of this, retailers may expect an advance before many days. As a matter of fact, nails are not selling too well, and this cannot be given as a reason for the rise in price.

Solder is down from 27c to 26c per lb. The price of brushes has been raised owing to slump in exports of rice root and tampico fibre, resulting in high prices. As sisal fibre has been affected the same way, jobbers expect a higher price.

Paris Green Slow.

It is being noted that there is very little demand this year for Paris green. As a result the price has been dropped. Whereas quotations were 100-lb. cases at 24½c lb., the price is now 21½c, but the price for 1-lb. packages remains unchanged. Some jobbers report that they have very little this year. The demand usually comes in June, and if the crop is not healthy there is a big demand. Apparently this small demand can be taken as an indication that the bugs are giving little trouble this year.

A good demand is expected in July for agricultural tools, and some orders are coming in now for July delivery. Ice cream freezers are not moving very fast, this probably being one of the things people can do without. Winnipeg jobbers have just issued a new "per pane" price list for window glass, which should be in the hands of retailers by this. The price has been increased so as to give the retailer a discount of

40 per cent., compared with 30 per cent. formerly. On the old list prices a good part of the discount was swallowed up by the time the merchant had paid for boxing and freight. The result was, they used to hide their lists. The new list will make it easier to sell, and merchants will be able to show them to their customers.

Case Price for Glass.

Now, when a merchant orders fourteen lights of 36 by 38, there being eleven lights to a case, he will be charged the case rate for the eleven, and the light price for the three od dones. In other words, when a merchant orders 100 feet or over, he will be charged case price where possible. All jobbers are now in a position to book orders for fall, shipment to be made any time after August 15 and to get it to October I dating. To-day's prices are 2 off 30 days, or net 6 0days to October 1.

A manufacturer of builders' supplies, particularly sheet metals, reports that things look better than they did two weeks ago. Jobbers, he says, are realizing that retailers' stocks are low, and that if they are going to stock for fall trade, they must place their orders now. Building operations are just beginning to open up in earnest. On general lines of summer goods, such as poultry netting, stocks are almost depleted.

Sporting Goods

The Hingston-Smith Arms Co., Winnipeg, state that the biggest demand just now is fir fishing tackle and riflemen's sundries. Hammocks are reported to be moving slowly, which they always do until the real holiday season arrives. Boats and canoes are going well, particularly small boats and detachable motors. Jobbers are reaching the fag end of their busy season, and the next two weeks will see them down to normal again. Jobbers are getting in shells, preparatory to moving out next month. The crop reports do not seem to have much effect on this business, which has been exceptionally good all year. Little business doing in guns, except for trapshooting. Campers' supplies are beginning to move more freely.

Paints, etc.

Manufacturers are doing a bigger mail business this year than ever before, owing to the fact that dealers only put in a light stock last spring, and have been sending in their sorting orders right along.

Stoves

Very few stoves are being ordered ahead, but orders for immediate shipment are good. A local manufacturer's representative states that slackness in the stove business is due not a little to the fact that many hardwaremen are changing over from a credi to a cash business, and are not selling to the farmer unless he can show the money.

AUTO ACCESSORIES A SPLENDID LINE.

(Continued from page 39.)

not, but the unusual and the new requires a little missionary work.

From the results of my own experience, I have no hesitation in recommending the line of automobile accessories to other hardware dealers, particularly so if he should be situated as I am, in a town that lacks a garage. On the other hand, the mere presence of a competing garage need not discourage him. Someone will start one some time anyhow, and none of us can expect to have any good field to ourselves for any considerable length of time. If a garage can exist solely through its sale of parts and care of cars, then surely a hardwareman can make a nice profit out of the first item, when it is not necessary for him to increase his overhead charges, nor to make a costly outlay for equipment. There are few towns of small size that boast garages and the mere presence of the latter is usually an indication either of a fair-sized town, or else a large number of cars.

In any case I would never consider doing without this valuable line. Aside from all purely pecuniary profits that I have made in the auto lines, I consider myself well repaid in the additional customers they have gained for me in a wide variety of articles, from lunch buckets to lawn mowers.

Fire Losses.

Tilbury, Ont.—Several buildings, including the hardawe stores of H. Sloan and M. Stewart, were destroyed by fire.

Augusville, Man.—A. N. Phizacklen, hardware, has suffered fire loss and discontinued business.

New Abrasives Company Formed.

The Wausau Abrasives Company has been organized and incorporated for the manufacture of abrasives, papers and cloths. It is the intention of the new company to manufacture only the best grades of sandpaper, emery cloth and garnet goods.

The new company has purchased the plant, equipment and real estate, trade marks, etc., of the Wausau Sandpaper Co., of Wausau, Wisconsin. P. W. Sawyer, formerly general manager of the old Company, heads the new company as president and general manager. The other officers are Chas. B. Osen, vice-president, formerly sales manager, and J. K. Sawyer, treasurer. R. E. Chartier, secretary. The new company started operations June 15th.

Appraisers' Bulletin No. 856

The Department of Customs has sent out the following notice regarding wire gauges and extras on wire for the guidance of Customs Officers:

In view of the provisions contained in Item 404 of the Customs Tariff Amendment of 1914, Bulletin No. 779 of Feb. 23rd, 1914, respecting Wire Gauges is hereby cancelled.

In regard to wire subject to duty or dumping duty, as there is usually an extra charge made for drawing wire smaller than the base size (No. 9), and as such charge varies according to the gauge of the wire, the following rules may be observed in estimating the charge for "extras" entering into the value of the wire; viz.,

For the purpose of computing extras on wire of irregular gauge number, the size of the wire may be reckoned as represented by the next smaller gauge (higher number) as numbered on the Imperial Wire Gauge.

Under Tariff Item 404, Steel Wire of Nos. 9, 12 or 13 Gauges must not vary more than four one-thousandths of an inch from such gauges in order to be admitted free, otherwise such wire is dutiable.

The Gauge Numbers from No. 1 to 30 inclusive and the corresponding diameters in decimals of an inch as shown on the Imperial Standard Gauge are as follows:—

No. 1	.300	No. 16	.064
" 2	271	" 17	.056

Seasonable Paint Display that Brought Results

Many Novel, Yet Practical Features Introduced by Winnipeg Window Trimmer in a Paint Window Display—How the Display Was Planned—Show Cards and Figures Used.

Written for Hardware and Metal by C. H. Smith, of J. H. Ashdown Co., Winnipeg, Man.

WINDOW displays of paint are right in order during the summer months, and the trimmer should make paint displays regularly in order to derive the best results.

For the past six weeks we have had a paint window every week, changing from one line to another, but keeping it before the public all the time. One week we make a display of kalsomine, then a display of varnish and varnish stain, next one of ready-mixed paint, and so on through the entire paint department.

A great many ideas can be used in making paint windows but one of the best is to show some actual work done with the paint being displayed.

A window of this kind is always sure to do good work and deliver the goods as most people want to be shown when it comes to painting.

The window display of paint here shown was a very big display, this window being twenty feet long, and it certainly brought results. There was considerable work about it, but it paid in the end. In arranging this display the first thing we did was to get our various articles painted and ready for the window as they were the main features.

A section of a floor was used to show floor paint, one part of it being given two coats of floor paint which clearly demonstrated what a great difference the paint would make to an old worn floor. A show card reading as follows, was used on this section: "Two coats of floor paint will save your wife many a backache and you several doctors' bills."

The accompanying article and illustration shows how an exceedingly novel, yet practical and attractive paint window display was arranged by a Western Canada window trimmer. The article tells how the display was planned and how the goods were arranged in the window. The fact that a number of partly painted articles were shown made the display doubly effective. Several other novel features are mentioned in the description supplied by the window trimmer. Several features of this display could, —at practically little or no expense,—be copied by window trimmers in other places. —Editor.

To demonstrate shingle stain a section of a roof with the old shingles on was used and one half of it given a coat of shingle stain. A card as follows was used on this:

"One coat of shingle stain will make your house look dandy and add several years to the life of your roof."

A chair was used to show varnish stain, one-half of it being given one coat, which made quite a contrast. The card used on the chair read as follows:

"One coat of varnish stain will renew the beauty or change the finish of any piece of furniture."

Next a section to represent the side of a house was used to show house paint, part of it being given two coats of white paint and had a card:

"Two coats of house paint will make your house worth $500 more."

An old window screen was given a coat of screen paint on one-half and a card placed on it reading as follows:

"One coat of screen paint will hide the rust and dirt of many seasons."

These articles ready for the window, we were ready to make our display. The back was first covered with red sateen against which the paint showed up well, show cards and advertising matter were used on the back. The paint was arranged in pyramids at the back, the entire background being made up of all sizes of paint cans. On the bottom and well towards the front, the various articles to show the uses of paint were placed, and in front of each was

(Continued on page 60.)

Novel and practical paint display which appeared in a Winnipeg hardware show window.

"CHALCO"

A PAINT AND VARNISH REMOVER
THAT'S 20% MORE EFFICIENT THAN OTHERS
YET COSTS NO MORE

To Retailers, Jobbers and Manufacturers:

We are now able to offer in "Chalco" a Paint and Varnish Remover of unusual merit.

It's 20% more efficient than others.

TRADE CHALCO MARK

The Paint and Varnish Remover

"We pay no royalties to put on your bill."

Weekly Market Report---Paints

MONTREAL.

MONTREAL, June 18.—Reports from retailers and jobbers continue to show that business is keeping well up to last year. Almost without exception there is a disposition to view the year as very satisfactory indeed. There has been a good demand for all kinds of prepared paints, varnishes and finishes, as well as oils and turpentine. The situation in turpentine is very interesting at present and much higher prices are looked for.

Turpentine.

The firmness that has characterized this market for the last few weeks has been intensified lately and quotations were this week advanced two cents a gallon. It is stated that turpentine is now costing 47 cents a wine gallon in the south, which is equal to about 62 or 63 cents a gallon here, by the carload, so that present prices cannot long remain. Quotations now are:

1 barrel .....66c per gal.
5 barrels ..... 65c per gal.
Five-gallon packages, 5 cents advance; packages extra; terms net.

Linseed Oil.

The market for both raw and boiled linseed oil continues very firm and the tendency is for higher prices. An advance of one cent was made last week, but prices have not since been changed, though a new price at any time would not come as a surprise. Quotations are:
Raw Linseed—
1 to 4 barrels .....61c per gal.
5 to 9 barrels .....60c per gal.
Boiled Linseed—
1 to 4 barrels .....64c per gal.
5 to 9 barrels .....63c per gal.

White Lead.

No change has been made in white lead since last report. There is a good demand and quotations are $8.25 for less than ton lots and $8.05 for ton lots.

Glass and Putty.

Glass quotations are unchanged at $3.40 base, net, for country; and $3.65, less 5 per cent., for city trade. All other quotations are as listed in current market report. Demand is fair for both glass and putty.

Gasoline and Benzine.

No further change has been made in the price of gasoline or benzine, but sales have been active at present prices, which are:
Barrels, in wood .....21c gal.
In steel and drums .....18c gal.
Tank wagon (100 gals.) .....17½c gal.
Benzine is quoted at 20c per gallon, in single barrels.

TORONTO.

TORONTO, June 18.—Paints of all kinds remain the one line in best demand in local hardware circles. At that, however, there has been a slight lessening in demand during the past week. In this line, in direct contrast to most of the others, dealers are unanimous in claiming a largely increased business in May and June, over the corresponding period of 1913. The only price change of late has been in turpentine, and even that may still be had at the old price in some quarters.

Turpentine.

Following the two cent raise of a week ago, there has been another advance of one cent in this staple. The ruling price is now 70c per bbl. in single bbl. lots, but this price may be shaded in some quarters, as the higher price is not universal in its application. Prices are as follows:—
Less than barrel lots .....77c per gal.
Single bbls. .....70c per gal.
Two to four bbls. .....69c per gal.

Linseed Oil.

Linseed oil is unchanged in price, but is firmer. There are no authorative returns yet on the flax acreage of the Northwest, except that it is likely to prove less than it has been for the last few years. The breaking of so much raw prairie land resulted in a heavier flax acreage than is likely to be the case under normal conditions. This is due to the fact that the farmer who planned on putting in wheat, might finish his spring plowing so late that he frequently had to change his plans and revert to flax instead. It is still too early to determine the flax prospects of the Argentine Republic, the worlds largest producer of flax. Ruling prices are as follows:—

	Raw.	Boiled.
Single bbls., per gal.	63	66
3 to 5 bbls., per gal.	62	65
6 to 9 bbls., per gal.	61	64

Some large dealers are emphatic in prophesying 70c oil in September, and base their statements upon London reports, which show that tendency to be well established there.

Gasoline and Benzine.

After the two late drops in these staples, they have steadied down to last week's prices of 19c for benzine and 20c for gasoline. Sales in these lines have held up remarkably well this spring and early summer as compared with that of 1913.

White Lead, Paris Green, Etc.

White lead is unchanged in price, the various brands varying from $7.90 to $9.50 per cwt. in price, according to the brand and quality. There is some talk of a readjustment of white lead prices when the association meets in July, but no lowering is anticipated.

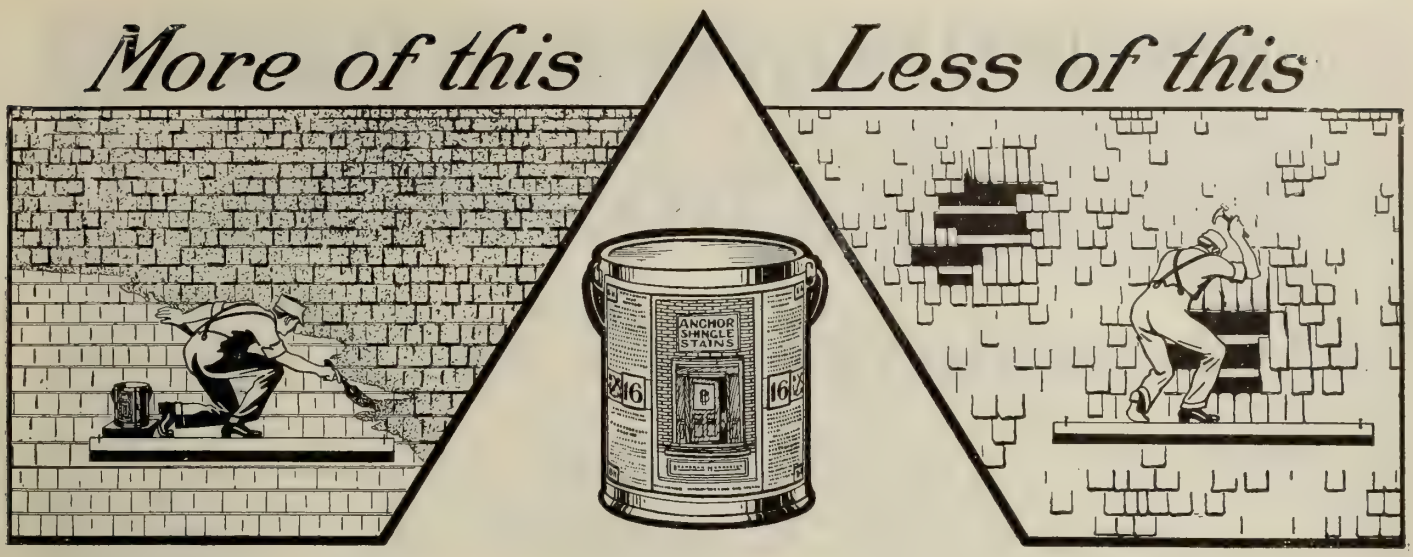
Arsenate of lead is unchanged, and quiet at $9.75 per 100-lb. keg, other sizes varying in proportion to the amount. Paris green remains the same at 11¼c, 17½c and 19c per 100-lb. drum, according to the brand desired. Smaller or larger lots in proportion. Demand is poor in this line, but the cold weather may be blamed for this fact, which will doubtless be reversed when the warm weather brings the fruit and bugs into greater prominence.

Glass and Putty.

Glass prices remain the same as per current market quotations. Glass plate is still 40 and 5 off for country, and 50 and 5 off for city. Manufacturers and dealers complain of the low prices that prevail in glass generally. A result of a lessened trade and keener competition has undoubtedly resulted in some shading of prices in many lines. Putty is unchanged at $2.40 for bulk and $2.60 in 100-lb. drums. Pure putty is still 70c higher.

PAINT DISPLAY THAT BROUGHT RESULTS.

(Continued from page 58.)



arranged a display of the particular line which was used on that article.

Another novel feature of this display was the use of small men placed in natural positions, each with a brush in his hand, and looking very much like a live painter.

At one end of the display and hardly visible in the photo was a model paint mill which was used to demonstrate the making of paint. Grouped around this mill were large jars containing the raw materials and also tins of the finished product.

Then each afternoon while the display was on a man was in the window running this mill, which is operated by an electric motor, and he showed the various operations in the making of paint. Needless to say the demonstration attracted a crowd.

A display of this kind requires more work than the ordinary paint window, but it is well worth it in the extra results secured.

IT PAYS TO SELL WHAT EVERYONE NEEDS

Think of the hundreds of householders in your town who want and would buy a reliable shingle stain, if convinced that it really was reliable; think of the profitable trade you could develop by offering such a stain.

Anchor Shingle Stain

opens up just such an opportunity for you, because it has just the characteristics people are seeking—beauty, dependability and exceptional endurance.

It is not a chance mixture, made to sell, but a scientifically compounded product that represents the best our skill can do in the production of a reliable shingle stain.

Creosote to preserve, permanent colors to give beauty and our Special Binding Oil to hold the other ingredients to their work through all weathers—it gives splendid service and satisfaction.

By selling Anchor Shingle Stain you can reap the benefits that always follow the sale of really superior goods.

Jamieson's

Paints and Varnishes

are good profit-makers for the hardware dealer, because they please his customers, besides allowing him a good percentage of profit.

R. C. Jamieson & Co.
LIMITED

Established 1858

Montreal - Vancouver

Owning and operating P. D. Dods & Co., Ltd.

Over half a century of paint-making experience is behind Jamieson's Pure Prepared Paints.

12

Full many a lady I have eyed
With best regard.
For several virtues
Have I liked several women.
But you! oh you; so perfect and
So peerless are created
Of every creature's best.
"The Tempest."

INDIVIDUALITY

is certainly expressed in the above terms, which were used by Ferdinand in his declaration of love to Miranda. He was a man of the world, whilst Miranda had seen no man but her father, Prospero, and Caliban, a deformed slave.

INDIVIDUALITY

is also the chief feature of the goods we manufacture, and, like Miranda,

THEY are PERFECT and PEERLESS

HARDWAREMEN will do well to get our prices on BABBITT, SOLDER, LEAD PIPE, TRAPS AND BENDS, INGOT, METALS, ENAMELLED WARE AND ALL PLUMBERS' SUPPLIES.

SINCE 1893

There's not a product offered you, for selling through your store, that will make you permanent customers quicker than Muresco. Since 1893 it has been satisfying customers throughout the Dominion. Each year the amount sold has exceeded the record of the year before until now it's the choice of nearly everyone who knows of it.

To sell Muresco to those who know it adds to your reputation with them; they associate its reliability with your store. To sell Muresco to those who ask for a "wall finish" will help make them your permanent customers; it will give them absolute satisfaction and you'll get a large part of the credit.

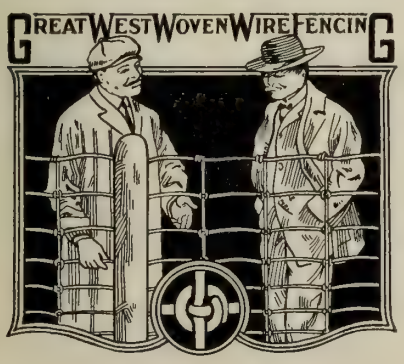
Benjamin Moore & Co., Ltd.
6 Lloyd St., West Toronto

MURESCO

Do you sell it?

Stephens PURE **PAINT**

A PAINT VALUE THAT GETS RE-ORDERS



Stephens House Paint has wonderful weather-resisting qualities and no superior as a surface coverer.

It is the **favorite of Western People** and is paying Western dealers a splendid profit.

Why not be our agent? We have an excellent proposition to offer you.

WRITE US ABOUT IT NOW.

G. F. Stephens & Co., Limited
WINNIPEG, CANADA. Branch at Calgary, Alta.

DEALER

This Lock, Mr. Farmer, is the one used in our "Great West" Fencing

You might possibly get some cheaper fence than ours, but you will look in vain for any better.

Our Fences are made in the West, designed especially for the Western trade, and we guarantee every Rod as to strength and durability.

It is the "Standard Fence" of our "Great West."

Write for our illustrated catalogue and price list.

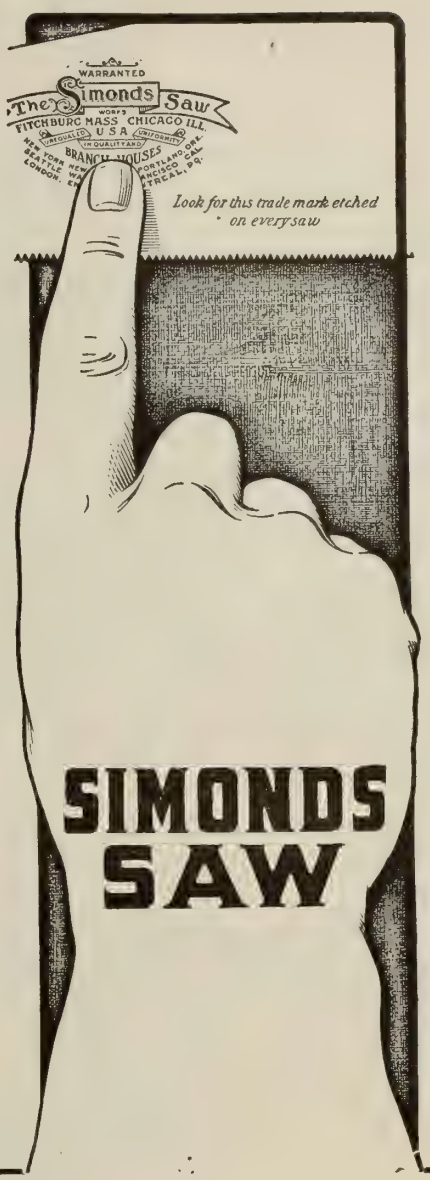
And 460 other prizes amounting to $11,500



Let us cooperate with you in trying to win one of the 463 cash prizes by furnishing you with information and data that will help you to get up

An Unusual and Striking Window Display of Yale Products.

Canadian Yale & Towne Limited

Makers of Yale Products in Canada:
Locks, Padlocks, Builders' Hardware and Door Closers

General Offices and Works: St. Catharines, Ont.

The carpenter is now looking for the name "Simonds" and the Simonds trade-mark on the Hand Saw he buys. He is willing to pay $2.50 or $3.00 for a Simonds Hand Saw in preference to paying half that amount for a saw not only cheap in price but cheap in quality. Hardware Dealers throughout Canada can buy these saws either direct or through jobbers. It is essential for the best grade of stores to carry high-grade saws. You make no mistake when you stock the Simonds Saw. Send for catalog and best Dealers' discounts.

Specialties Make Sales In Summer

Do you realize the profit-making possibilities of paint specialties at this time of the year?

Think of the hundreds of people in your town who have need for some of these products right now. The Canada Paint Co.'s special lines represent value that will appeal to your customers, and establish a steady trade. All the packages are attractively labelled, and sell at a price that is fair to you as well as to the customer. Look over this list and see what you have call for. A small stock of these lines will enable you to add to your profits, and at the same time give your customers the very best value for their money. Send your order to any of our warehouses or factories, and it will receive immediate attention. Our new price list is yours for the asking.

C.P. Oxidized Art Enamels for furniture, wood-work, picture frames, shelves, etc.

C.P. Bath Enamel for refinishing old bath tubs. Will stand hot or cold water.

C.P. Canoe Enamel for canoes, row boats, sail boats, porch and lawn furniture, etc. Dries with a fine gloss that will withstand severe usage and weather.

C.P. Floor Wax for hardwood floors. Made in paste form. Easy to apply, produces a splendid finish, and is a superior product in every way.

C.P. Wire Screen Paint for all kinds of wire screening. Prevents rust, and does not clog the mesh.

C.P. Stove Pipe Enamel. This enamel is known to housewives in every town, for the satisfaction it gives. Put up in lever tins. Your name printed on the labels for orders of one gross or more of one size.

C.P. Gold and Aluminum Paint. For picture frames, radiators, bric-a-brac, etc.

C.P. Sun Furniture Polish. Polishes highly finished surfaces without injury in any way.

C.P. Sun Brass Polish. Shines brass, copper, bronze, nickel, etc., without scratching.

MILLER-MORSE HARDWARE COMPANY, LIMITED, WINNIPEG

Ellicott Design

Dull Brass Finish, relieved.
On Wrought Steel.

WHEREVER the Builder's opinion is sought relative to the appearance of doors trimmed with this design, you will almost invariably find that he has placed the Ellicott among his choice selection of steel sets, and reasonably so, for the same plain, yet dignified appearance that distinguishes the Ellicott in wrought brass, is equally well displayed when presented in wrought steel.

Inside Door Sets	No.	6116

A Specimen Page Booklet is just a nice pocket-size.

A NEW BOOKLET ON LOCK SETS

IT SHOWS A VARIETY OF DESIGNS THAT HAVE BECOME VERY POPULAR.

LOCK SETS FOR WHICH THERE IS A "FAIR" DEMAND ARE OMITTED FROM THIS BOOKLET.

ONLY THE REAL LIVE LINES ARE SHOWN.

THAT'S WHY IT'S SUCH A VALUABLE BOOKLET FOR THE DEALER — AND IF YOU ARE "AFTER THE BUILDERS' TRADE" WRITE FOR IT BY ALL MEANS.

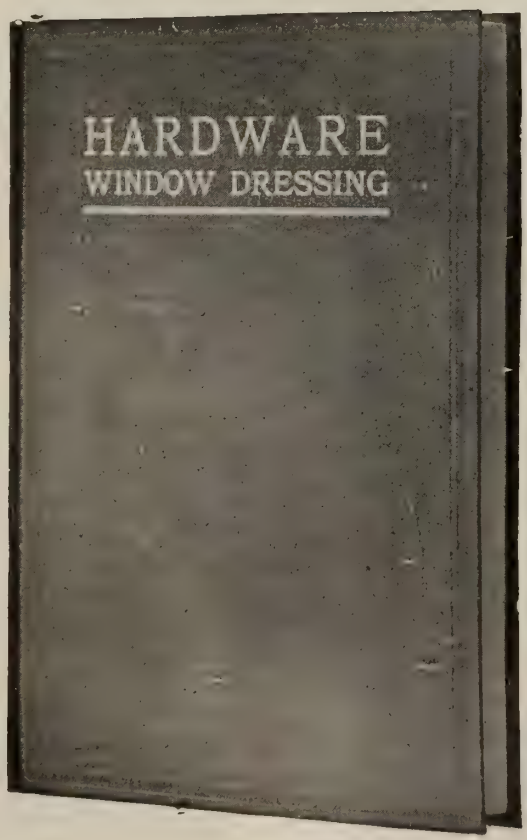
PRINTER HAS PROMISED TO HAVE IT READY JUNE 20TH, SO THIS ANNOUNCEMENT REACHES YOU JUST IN TIME TO INVITE YOU TO WRITE FOR ONE OF THESE ATTRACTIVE AND USEFUL LITTLE BOOKLETS—OR SEVERAL, IF YOU WISH TO PASS ONE OR MORE COPIES TO ARCHITECTS AND BUILDING CONTRACTOR CUSTOMERS.

ONLY RETAIL PRICES APPEAR.

MILLER-MORSE HARDWARE CO. LIMITED
"THE BIG WINNIPEG HOUSE"

Under any test these splendid paints demonstrate quality—plus.

Test them in the laboratory—their ingredients will prove to be the best that money can buy.



Test them "on the job." They cover more surface, give a better finish and last longer.

Test them as money-makers in your store. They have hosts of old friends—who have found them good and tell their friends so. They move fast, and seldom fail to give satisfaction—plus.

In the rare cases where you get a real complaint, we back you up in any fair settlement. Write us.

PORT ELGIN ONTARIO

The gathering of the clans

"On to Toronto!"

YOU have doubtless noted with gratification the great movement for honesty and square-dealing which is revolutionizing American and Canadian business methods. Our goods, our salesmanship and our advertising are being cleansed and vitalized by the spirit of truth and sincerity.

As a result we see a growing public confidence in manufactured products and their advertising—a confidence which, if preserved and fostered, will decrease our costs, increase our profits, and become a business asset of incalculable value.

Foremost in the fight which has brought about this revolution stand the Associated Advertising Clubs of America, whose emblem is shown above. If you are a business man, interested in the manufacture, distribution, or selling of commodities of any nature, you should attend the Tenth Annual Convention of the A. A. C. of A. at

TORONTO

June 21-25, 1914

At this Convention you will hear the inspiring story of the manner in which these tremendous reforms are being effected. More than this, you will hear the problems of distribution, merchandising, salesmanship and advertising discussed by able and successful business men, in a series of open meetings.

These meetings will cover the questions of chief interest to the 10,000 business men comprising the 140 clubs of the A.A.C. of A.—*your own* problems included.

EDWARD MOTT WOOLLEY, the famous writer on business topics, has written a booklet entitled *"The Story of Toronto."* This booklet describes in a forceful, intensely interesting manner, the wonderful work the A.A.C. of A. are doing for clean advertising and square business methods, and the significance and importance of the Toronto Convention. This booklet will be sent free to all business men asking for it on their business stationery—together with detailed facts as to the convention programme and rates for accommodations.

"Hercules" Step Ladders

are strong and well made —and they look it.

All stock entering into this ladder is carefully selected from the finest material.

The nails which pass into the end of each step are held firmly in place by a patent malleable iron washer. Iron rods connecting these washers form, with a small block under each step, a truss support, the tension of which can be readily adjusted.

The **"Faultless"** Lock keeps it from opening or closing when in service.

Ears are of malleable iron, and all braces are bound with steel angles.

All iron and steel parts are finished in aluminum, which, with the clear, bright woods, make this pattern **one of the most attractive, easiest sellers on the market.**

GALT, CANADA

Reading Brimful of Interest for Busy Canadians

The July MacLean's, just off the press, is full of feature articles and stories which should appeal to every Canadian. Does not this list interest you?

"The Education of the Camp"—A strong article by a military authority on the benefits, physical and otherwise, of militia training.

"On the Firing Line in Riel's Day"—The first of a series of articles on the North-west Rebellion, written by one who served through the last campaign. These stories will be full of reminiscences given to the public for the first time.

"The Adventures of Madelyn Mack: Detective"—The best detective stories published since Sherlock Holmes first appeared. The first of this series appears under the title "The Man With Nine Lives"—A strong recital of adventure, written in graphic, vivid style.

"The Miracle of the X-Rays"—A clear presentation of one of the greatest discoveries of modern times. The fascination that science exerts on the lay mind will serve to make this article one of absorbing interest to all.

There is nothing a man could not do if he had the right information before starting at it. Under the heading: "Getting the Facts," a Lieutenant of Harrington Emerson, the chief exponent of efficiency, tells how the right information can always be obtained. Want to get started on the highroad to success? Read this article.

Glen Campbell—Broncho buster, sturdy man of the plains, orator, player of practical jokes, firm friend and hard fighter—is the subject of a breezy sketch that will both interest and amuse. Meet this famous Western M.P. in the pages of July MacLean's.

These are just a few. There are plenty more of the same kind to be found in the July issue of Canada's national magazine. If you don't read MacLean's, start with the July number.

Send a postcard and have your name added to our subscription list. You'll be delighted with every issue.

Subscription price $2.00 *per year.* 20 *cents a copy.*

Hardware and Metal's Electro Service

AT the request of many of our readers and in order to assist Canadian hardwaremen in such a manner as to make it easy for them to use illustrations of staple hardware lines in their newspaper, circular or catalogue advertising. Hardware and Metal's editorial department has instituted a new service, viz., the supplying of electros of staple hardware lines at a reasonable price. Many merchants claim that the electros they have on hand are of such large proportions and occupy such large space that their use is almost prohibitive on account of the cost of newspaper space. By using small electros of seasonable goods the merchants will be able to feature several lines in one advertisement at a very reasonable cost. Hardware and Metal will from time to time publish seasonable advertising suggestions in which electros here shown will be used. In ordering electros be sure and order by numbers. Price of electros shown on this page is 15c each. Cash with order. Address all orders to Hardware and Metal, 143-153 University Ave., Toronto, Ont.

DIRECTORY OF MANUFACTURERS

Hardware and Metal receives, almost daily, enquiries for the names of manufacturers of various lines. These enquiries come from wholesalers, manufacturers and retail dealers, who usually intimate they have looked through Hardware and Metal but cannot find any firm advertising the line in question. In many cases these firms are anxious to secure this information at once. This page enables manufacturers to keep constantly before the trade lines which it would not pay to advertise in larger space.

DOMESTIC ELECTRICAL WORK, BY WILliam A. Wittbecker. Concise and Practical Explanation for Plumbers and Hardware Dealers, on How to Wire Buildings for Bells, Alarms, Annunciators, and for Gas Lighting From Batteries. The information given is practical, and with a close observance of the directions laid down, any one, though entirely ignorant of electricity, should be able to do the work described. Illustrated with 22 diagrams. Price, in paper, 25c post paid. Price, in cloth, 50c. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE STORE BUSINESS METHODS —The authors of the articles in this book are for the most part practical and progressive hardware merchants. The embodiment in these articles of the experience of such able and enterprising men and the suggestiveness of the principles and maxims presented make this volume of infinite value to that trade. The 40 subjects discussed include: Rules and Regulations for the Hardware Store; Hardware Buyer; Good Methods in Stock Taking; Prices and Catalogues; Collecting Accounts; The Merchant and His Employees; Changing Business Conditions and How to Meet Them; Profit Figuring System; Starting in Business; Changing a Credit into a Cash Business, etc. 220 pages. Price $1.10 postage paid. MacLean Pub. Co., 143 University Ave., Toronto.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. size 8x11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

Keep in mind the dominant fact that mankind from its first appearance on the earth has been schooled by nature to look for signs; for invitations to taste; for suggestions as to what to wear. Tell your story briefly, forcibly, truthfully, and address it through the proper media and you can successfully apply advertising as a means to increased distribution.

Make Use of This Page for all Your "Wants"

Consult Your Travellers

Your advertisement in Hardware and Metal reaches the cream of the Canadian hardware trade. For over 25 years the most progressive and up-to-date retailers have contributed to its columns and depended upon its weekly market and merchandising information. This is the sort of connection that makes a paper valuable to its advertisers.

We want you to investigate these claims. Suggest to your travellers that they ask their customers

1. **If they subscribe for Hardware and Metal?**
2. **If they watch its markets from week to week?**
3. **If they find its merchandising articles of practical use?**
4. **If they consult its advertising pages?**

When you get this information you will want to place an advertisement with us immediately, or increase the one you already have.

You will be asked to spend your good money in many quarters this year of 1914. Why not investigate and see that you get value received?

Sell Heller-Aller Goods

They pay good profits, and the quality insures satisfaction

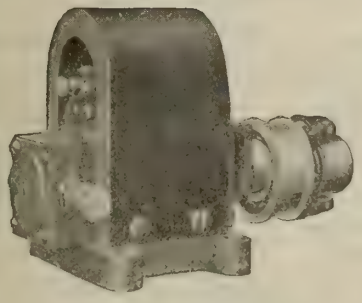
HALF-ROUND TROUGHS

These tanks have a steel frame or truss at each end. They are built to stand up under the abuse to which such goods are subjected.

Our oil and gasoline tanks are made of galvanized steel, and they will stand a lot of hard usage.

Screw caps opening on top to fill up by and a faucet in the side near the bottom to draw off contents. Prevents loss by vibration.

Our tank catalog will give you full information on these and many other styles of tanks. **Write for it.**



The Heller-Aller Co., Windsor, Ont.

OIL AND GASOLINE TANKS

THE LIGHT THAT'S RIGHT

Eureka Lite

Eureka Jr. B.C. 2

The New Metal Worker Pattern Book

This is the most elaborate and complete work that has ever been brought out for the use of sheet metal pattern cutters. It is printed from new type with a new and improved arrangement, especially convenient for reference and study. Parts of a former edition, entitled The Metal Worker Pattern Book, which have been utilized in its preparation, have been re-written and simplified and later methods embodied. 218 problems are now given, 75 of which are entirely new. A Treatise on Pattern Cutting as applied to all Branches of Sheet Metal Work. By George W. Kittredge. 430 Pages; 744 illustrations; Size, 10 x 13 inches. Cloth bound, Price, $5.00. Sent postpaid only on receipt of price.

PERSISTENCY IN ADVERTISING

One stroke of a bell in a thick fog does not give any lasting impression of its location, but when followed by repeated strokes at regular intervals the densest fog or the darkest night can not long conceal its whereabouts. Likewise a single insertion of an advertisement—as compared with regular and systematic advertising—is in its effect not unlike a sound which, heard but faintly once, is lost in space and soon forgot.—*Printing Art.*

S.W.

That Trade-Mark

On the back of a STANLEY No. 241 Butt Distinguishes the Original No. 241 Butt sold in Canada and elsewhere from inferior imitations.

The Stanley No. 241 Butt is a Wrought Steel, Loose Pin Butt with a Planished Surface and a Plated Finish. It sells for a little higher price, because it is worth more money. And it is worth more money, because it is better made in every respect. Let your own good judgment decide—that's enough. **We can make prompt delivery in any quantity of all Stanley Products.**

Failing to get Stanley No. 241 Butts from your jobber, we shall be pleased to quote prices direct.

See page 1 for ¼-page advertisement

We Are Going to Use a Letter From Sapulpa, Oklahoma, U.S.A.

Mr. John S. Woofter, of Sapulpa, Oklahoma, allows us to make use of a letter wherein he states that the "ROSS .280 High Velocity is far superior to any Rifle he ever used"; and goes on to explain in detail how in one day, with one shot at 350 yards he dropped a 12-point buck; another shot at 250 yards killed a large buck, while a third, at 150 yards, felled a 10-point buck, though the ball only grazed the small of the back.

Good work for one day's shooting!

To any dealer who is interested we will cheerfully send a full reprint of this letter. It gives still further point to our statement that "every dealer should have a full line of ROSS RIFLES."

Starrett Tools
That Are Not Measuring Tools

42-326

Of course, the word "Starrett" makes everyone think of Precision tools for fine measuring. However, in addition to our measuring tools we have made from time to time certain special tools to meet the demand of mechanics who were dissatisfied with the tools then on sale.

Into these special tools we have put the same care, skill and fine material that have made our fine tools so widely used, and we know that hardware dealers can make easy sales on these tools merely because they bear the name, "Starrett." They will back up the Starrett reputation after they are sold.

We show here a few of these tools and we want you to remember them when you have a customer for this kind of goods. The nail sets in particular will appeal to carpenters and pattern-makers, as they are made of the best steel, perfectly tempered so they will stand long service without chipping or mushrooming.

Our catalog No. 20M.A. shows the full line and gives prices. Send for your supply.

"Prolonging The Life of Steel"

Opinion of *Scientific American* on

Keystone Copper Bearing Steel:

"The general results of alloying steel with the other metal show that copper and nickel are the best metals to add to the steel to give increased durability. Nickel is prohibitive on account of its price for general commercial uses.

Copper added in small quantities greatly prolongs the life of iron. Very small quantities are needed to effect this result."—Scientific American, issue of Jan. 3, 1914.

We shall be pleased to send reprint of above article complete, together with booklet showing results of a series of actual service tests. These indicate clearly the superiority of Copper Bearing Steel, and are of particular interest to all buyers and users of Sheet and Tin Mill Products.

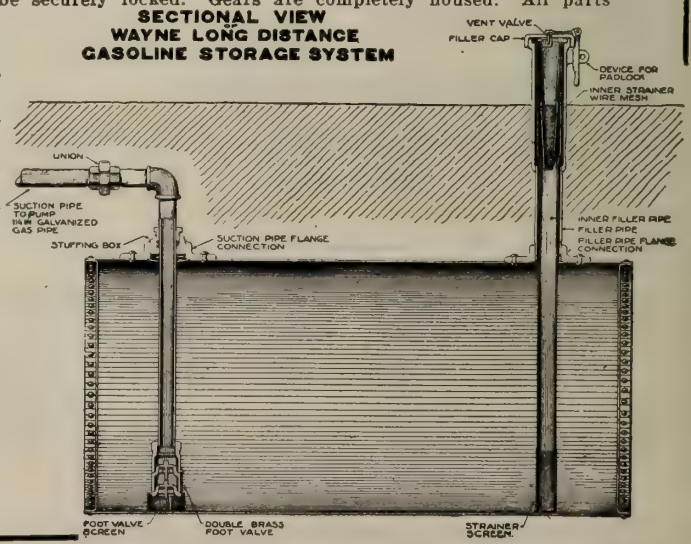
The Only Profitable Way of Handling Gasoline and Oils in the Retail Store

When gasoline and oils are handled with Wayne Storage outfits there is no waste due to evaporation, leakage and spilling. The waste does not seem to be very much at one given time, but in the yearly aggregate amounts to considerable.

This system also saves time and labor, as there is no constant filling and handling of measuring cups and the constant rolling in and out and tapping of barrels, and much space.

Does away with dirt and unpleasantness.



The **WAYNE PUMP** is constructed so as to throw a pint, quart, half-gallon or gallon, and measure exactly.

Works easily, and when not in use can be securely locked. Gears are completely housed. All parts are accurately machined and thoroughly tested, and are interchangeable.

WAYNE UNDERGROUND TANKS are made of the best grade of steel, carefully soldered and riveted, and finished in rust-proof asphaltum paint to prevent any possibility of corrosion; you bury the tank, as shown in detailed drawing, having the fill pipe come to the top of the ground, where it is handy for filling.

If you're interested in a Clean, Safe, Money-Saving Way of Handling Oils, write for full particulars.

Quick Sales Secrets

of Universal Coffee Percolators---Electric

E9166.
6 to 9 cups, $15.00—$18.50.

E9646
4 to 9 cups, $9.00—$12.75.

E9637.
7 cups, $7.50—$8.75.

FOUR REASONS

account for the ease and rapidity of sales of UNIVERSAL Coffee Percolators—Electric.

1

THE "UNIVERSAL" PRINCIPLE

embodied in the Pumping Process makes perfect coffee, delicious and healthful without boiling to liberate tannin. The patented pump and valve do it.

2

"UNIVERSAL" QUALITY

both of materials and workmanship is the finest. UNIVERSAL Percolators wear long and look well their whole life. Electric Heating Elements are safe and efficient. Guaranteed.

3

"UNIVERSAL" PATTERNS

are really artistic. No table service, however expensive or elegant, can put them to shame. Variety to meet any taste.

4

HOUSEWIVES KNOW

the Superiority of Universal Percolators from the experience of their friends and the continual advertising of these articles. It takes no argument to sell Household Specialties bearing the brand.

9 RUNAWAY BARGES SEND 156 CRAFT ADRIFT AND SINK 7

Boats Break Loose from Tow and Sweep Yacht Anchorages.

HAVOC ALONG SHORE OF THE HUDSON RIVER

Three Houseboats, with Families on Board, Among Those Struck and Damaged.

Nine runaway barges, laden with sand, gravel and other building material, swept through the numerous fleet of yachts, motor boats, launches and other small craft moored in the Hudson River between 137th and 170th streets yesterday morning, sinking at least seven of them and sending 156 adrift, many of them damaged.

All day the owners of the craft and the harbor police were busy searching for the drifting vessels, many of them being found as far south as 100th street.

A sudden squall out of the northwest at two o'clock yesterday morning parted the hawsers by which two tugs of the Cornell Towing Company were towing nine laden barges down the river against a rising tide. The nine barges, which had been lashed together, parted, two of them being blown inshore at 138th street, while the tugs caught the other seven, towed them inside of the cove at Fort Washington Point, opposite 176th street, and anchored them while they put out to stop the other two barges.

But these two barges were blown swiftly into the moorings of the Colonial Yacht Club, at 138th street, and with such force that three motor boats were sunk, forty more small craft were stripped from their moorings and the landing stage was smashed. The freed vessels started down stream. Their cabins had been crushed in by the barges, their sides scraped and their seams sprung in many instances.

The wrecking of the landing stage awa

The news story opposite goes to show how much damage may result from the parting of a rope. Viewed in this light, every poor or overstrained rope is a public menace.

A man's responsibility does not end with himself—it embraces everybody whom his dealings or actions may affect.

You, as a dealer, can do much to fulfill your responsibility by selling only Plymouth Rope, which is reliable, and by educating buyers to purchase new rope oftener.

Both these courses are also profitable—in money and good-will alike.

EVERY KIR-BEN IS GUARANTEED.

"Kir-Ben," the furnace with the added features.

Deep cup and flanged joints in Radiator.

Deep Cup Joints in Firepot.

Heavy Flanges on Firepot.

Straight Firepot with more grate surface.

Heavy duplex grates with roller bearings.

Removable grates without removing bolts.

Grates that remove the ashes from the sides of the firepot without disturbing the live coals in the centre.

Heavy, Deep and Large Ashpan.

Heavy, one-piece bottom and ring.

Large Feed Doors, 12½ x 16 to 15¼ x 17.

Patented Radiator Top—no arms to break from heat expansion.

Heavy, always-ready, explosion damper, full size of smoke pipe.

Automatic damper, controlled by feed door, too heavy to burn out, designed to prevent warping.

Hot water connections for heating kitchen boiler made two ways.

Dust damper that will not clog.

Extra large ashpit, square, no corners that are hard to clean.

Large ashpit door, unusual size—same as ashpit.

Large water pan, easy to remove for cleaning.

Feed door opens direct draft damper, no smoke or gas in the face when firing.

Complete control of fire from upstairs, three damper chains giving graduated control of draft and checks.

Water pan gives proper humidity at all times. Placed to prevent cracking of castings in case of overflow.

KIR-BEN AGENCY IS THE BEST

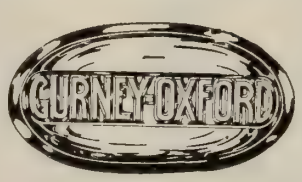
Kir-Ben, Limited, Almonte, Ont.

"Ask the Woman Who Owns One"

There is a story told of a young advertising man who, when asked what he considered to be the finest job he knew of, said "Copy writer for the Packard Automobile Company."

"Why?" we enquire to know, as the Japanese school boy put it.

"Well," he returned, "you simply write "Packard. Ask the man who owns one," and you are through for the day.



But that is certainly a splendid slogan that the Packard people have, probably the best advertising slogan ever devised.

And you can apply the spirit of it, if not the actual words, to the selling of Gurney-Oxford Stoves.

When a woman wants to know which stove will give her the most actual value in results, in economy and in satisfaction, apologize to the Packard People and say "Gurney-Oxford. Ask the woman who owns one."

The reputation of the Gurney-Oxford is and always has been in the hands of the women who use them. We have told them what the Gurney-Oxford would do. It has done just this, and more, and that's why you can ask the woman who owns one and get a most favorable and complimentary report.

BOSS OVEN

GLASS DOOR

GUARANTEED

No. 7

BOSS Glass Door OVENS

Sold throughout the World. In almost every Country where Oil, Gasoline or Gas is used as fuel, you will find the Boss Oven on sale.

Its tremendous popularity is due to the fact that it is first of all a good and economical baker. We guarantee it to bake or roast satisfactorily on any good oil, gasoline or gas stove, or "money back" without argument.

The "BOSS" is made better than any other Oven. Only the best materials are used. The body is made of Mecca Lustre Polished Blue Steel. The linings of heavy Corrugated Tin Plate, having thick asbestos inner linings throughout.

Its Patented Glass Door, which we guarantee not to steam up or break from the heat, has been a universal success. More than 600,000 of this style are now in daily use.

Many patented and exclusive features are found in the Boss. The new Hinge and Door Support leave the door opening entirely free when Oven is open. No danger of burning the hands or arms by coming in contact with wires or chains.

Large variety of styles and sizes in Glass and Steel Doors are shown in our new catalogue, which will be sent on request. Write for it to-day.

Write to-day for Complete Catalog and prices.

NEW BOSS OIL STOVES

Every Vital Feature in the construction of an Oil Stove has been carefully worked out in the "New Boss." There is nothing complicated to get out of order—nothing hard to understand to operate it properly.

Simple but Substantial construction has been adhered to throughout. The extra wide top gives more room for cooking utensils. The legs are strong cast iron, making the stove very rigid.

Patented High Wick Limits or fingers are provided on the inner combustion tubes which are engaged by the wick when turned at full burning height. These fingers automatically trim the wick when chimney is revolved.

The Intense Blue Flame plays right against the cooking utensil, giving quicker results and using less oil than most other stoves.

FOUR BURNER LOW WITH GLASS TANK

The HUENEFELD CO., 6000 Valley St., Cincinnati, Ohio

Let us tell you the reason,

that you should stock up with the Dana Peerless Freezer, right now.

The Peerless makes its greatest appeal in Summer. Although it's in demand all the year round—naturally, in the sultry months, the demand is greatest.

And the Peerless appeals irresistibly to those people — the Summer campers, the commuters who go to live, far from the stores, where good ice-cream is procurable.

If you have it in stock, good and early, you'll be able to show it to them before they go,—you'll have time to demonstrate it—to point out the tall, slender can—to show them how the dasher removes the cream from the sides as fast as it becomes solid. You will be able to let them crank it themselves, to let them discover that it is as easy to grind as a watch is to wind.

That's the reason you should stock the Dana Peerless **now.**

A mighty good reason, isn't it?

You'll think so, when we tell you about the profits.

So ask your wholesale hardware supply house about them now.

DAVIDSON'S NON-EXPLOSIVE
Premier Underwriters Safety Gasoline Cans

Specially made for Gasoline, Benzine, Alcohol and all highly inflammable explosive liquids. Saves 30% Evaporation, and preserves the volatile qualities of the oil or spirits.

Strong and Superior Construction—Finished in a beautiful Japan Red.

The principle of this Can for safe storing of Gasoline depends upon the same fire-stopping property of wire gauze that gives absolute safety in use, to the celebrated "Davy" mining lamp. *The brass tube* extending into the tank is covered at its base by wire gauze and is sealed at the top by an automatic valve which practically makes it air-tight. If fire occurs near or or around the tank and excessive gas is formed by the heat, this valve opens automatically and allows the dangerous gas to escape.

In case contents of Can are ignited the vapor escaping through the gauze-protected tube will burn quietly and harmlessly at the orifice without exploding.

Tested by the most competent Engineers and accepted by the Underwriters, its use is therefore a positive safeguard to human life and property, and will reduce your insurance rates to the minimum.

—Three Sizes—

1, 2, and 5 gallon.

BURLAPS for WALLS

DOUBLE SIZED and OIL COATED

Made in widths of 30, 36, 45, 54, 60, 72 and 90 inches.
All Standard Shades.

DYED BURLAPS

Made in widths of 36, 54 and 72 inches only.
A Good Variety of Shades.

LENGTH OF ROLLS, ALL LINES, 30 and 60 Yards

How Our Burlaps Are Made

CANVAS: Every yard of the Jute Canvas used in the manufacture of our Burlaps is specially woven for us in Dundee, Scotland, from yarns of uniform counts and standard strength. After being woven the Canvas is super-calendered, stretched and made unshrinkable.

OIL: The only Oil used in our Burlaps is pure Linseed Oil, crushed from Western Canada seed of a high grade; further this Oil is made under our personal supervision, kettle boiled and tested on our own premises.

MACHINERY: We have taken advantage of every improvement in the way of modern machinery that has been brought to our attention and in addition we have the benefit of the experience of engineers who have been in our employ for more than a quarter of a century; the facilities of our immense plant for the manufacture of Oil Cloths and Linoleums are at our disposal for similar operations in the manufacture of Burlaps, and these additional features of machinery and special equipment utilized in our other departments and available for our Burlap manufacture place us in a unique position in this field, hence the cost of production is kept at the lowest possible point and purchasers of our lines get the benefit.

WORKMEN: The use of Burlaps as a wall covering is of comparatively recent origin, although we have been manufacturing this line for upwards of twelve years, but in our employ are scores of men who have been handling Jute Canvas, Oils, etc., for thirty years and more;—having the services of men with such long experience in this work gives us an unquestioned right to claim a unique position in the manufacture of Decorative Burlaps.

Handled by Leading Jobbers of Wall Papers, Paints, etc.

"Hamilton Jewel" Gas Ranges

are ready sellers because of their attractive design and finish, and they ensure the utmost in GAS ECONOMY which means maximum satisfaction for customers.

We have gas ranges for every purpose. Our Catalog describes them fully. Horizontal needle-point valves are used exclusively.

Adjustable Non-Leaking Needle-point Valves

Quickly and easily adjusted to burn any kind of gas at ANY PRESSURE.

The valve is horizontal and secures a perfect mixture of gas and air; the gas is delivered from the point of the needle into the air chamber, where gas and air are thoroughly mixed; this insures a perfect blue flame, consuming the maximum of air and the minimum of gas, resulting in **greater heat and lower gas bills.**

The horizontal needle valve has **no seat, spring or screw, which are liable to wear, work loose and eventually leak.** They will last as long as the gas range, and for exact mechanical construction are absolutely guaranteed to be perfect in every detail. The adjusting nut shown separately in valve cut controls the flow of gas.

HARDWARE AND METAL

Vol. XXVI. JUNE 27, 1914 No. 26

The Road to Successful Stove Salesmanship

The Successful Salesman Will Stand Up for a Legitimate Profit—He Will Also Have a Thorough Knowledge of the Salient Features of the Line He is Selling—The Rewards of Attainment.

Written for Hardware and Metal by N. R. Turner, Sales Mgr. Toronto Branch, McClary Mfg. Co.

So keen has competition grown in the stove business in recent years that specialization has become necessary for successful salesmanship in that line. At the outset of this talk I want to emphasize the point that ability merely to dispose of a large number of stoves does not entitle a man to rank as a successful salesman. He can experience none of the satisfaction which comes from achievement if he does not get a safe profit on the cost of each stove after every item of overhead expense has been added to the wholesale price.

In the case of stoves on which the manufacturer sets a minimum resale price he is in honor bound not to sell below that price. Strict adherence to that policy combined with the other qualifications which characterize the highest type of salesmanship, will create in the public respect for and confidence in the salesman and his store.

If he is unable to close a sale at the regular price and, rather than risk losing the sale he offers the stove at a reduction, he virtually acknowledges that, in his opinion the original price is exorbitant, that in stating the first price he attempted to take advantage of his prospect's supposed ignorance of stove values and, finally, that he is unconscientious, and therefore unsafe to deal with. This soon creates distrust of the salesman and his store in the public mind (for the germ of suspicion spreads quickly); and may also injure the reputation of the manufacturer whose stoves the store handles.

A dealer who accepts the agency for a nationally-advertised line of stoves should remember that the manufacturer has spent thousands of dollars to produce an article which will be a credit to his name; and probably many more thousands to create nation-wide interest in the new stove before a single sale was made, and he assumes a moral obligation to do nothing which might injure the good name of the maker's line, while using every legitimate means to push the line.

The object of such a large expenditure of money by the manufacturer in advance advertising of a new line, and of enormous additional outlay for continuing the advertising is to arouse interest in the stove by acquainting the public with its distinctive features, and to create a demand for it, in co-operation with the preference which it will gain by the approval of people who have proved its value in daily use; to assist the dealer to obtain a legitimate profit on the line, and himself to increase his output.

It is, therefore, apparent that the interests of the dealer and the manufacturer are closely related, and the salesman in order to conscientiously fulfil his obligation to his employer, and through him to the manufacturer, must store his mind with all the information he can obtain about the line he is selling.

His strength as a stove salesman is in proportion to his knowledge of his line, and if he would achieve the greatest success that his opportunities allow, base his salesmanship on knowing his line from Whereas to Amen. To acquire that information he must take advantage of every opportunity to study the lines. Read the manufacturer's trade paper and newspaper advertisements for the salient features. Study all the special literature obtainable on the line for more detailed information. Listen attentively to what the manufacturer's road salesman has to say about his line; and ask him to explain points not fully understood.

Every salesman should avail himself of the first opportunity to visit the foundry where he will see the stoves manufactured, and see the earnestness of purpose that lies behind the production of every stove.

It is not suggested that he weave all this technical knowledge into his selling talk. On the contrary he should confine his demonstration to a plain, serious explanation of the points which are important to his prospect. Always remember that every part of a high grade stove is designed for some practical purpose and deserves a careful explanation; which he cannot give if he is not familiar with his subject.

The average man or woman is not a metallurgist or an expert on combustion, consequently, the more he avoids the language of a pedagogue the more agreeable will be the impression he creates. But knowledge, being strength, the more technical knowledge he possesses of his subject the greater will be his power to impress the customer, because he or she will feel that the careful explanation covering the features that affect the qualities which the layman wants to know about—such as baking and cooking, fuel consumption, water-heating, ease of control, accessibility of flues, replacement of fire-box, parts, minimizing of labor, heat radiation, durability, etc., is a conscientiously and carefully constructed superstructure founded on thorough knowledge.

To convince others he must himself be convinced. Therefore, he should neglect no opportunity of acquiring trustworthy information concerning the line of stoves he is selling.

To travel the road to successful stove salesmanship requires ambition, intelligence, conscientiousness, perseverance, tact and patience. But the goal is worth striving for. The rewards of attainment are alluring, for only the well-equipped succeed in reaching it.

Aggressive Methods That Create Sales

Hardware Merchant at Palmerston, Ont., Gains Ideas From Trade Journals—Real Co-operation With Hardware Salesman in Another Town—Auto Accessories a Good Selling Line.

An authorized interview by a Hardware and Metal representative with J. Chalmer, Palmerston, Ont.

I FIND that the most prolific source of new selling ideas that can be applied to my business is a close study of the methods of competitors and the actual knowledge of what the fellow in Halifax or Vancouver is doing, that I gain by a regular perusal of my trade journal. Sometimes, of course, I am able to work out new things for myself, but that is no reason why I should not also benefit by the experience of some of the brainiest men in the trade. My adoption of their ideas can not possibly hurt them and it helps me immeasurably.

The incident that really put me in the way of making a wholesale use of other's ideas came about by pure accident.

It happened in this way. There was in my employ at one time a man who has since had to move to another town owing to circumstances over which he had no control. He was a splendid clerk and a live wire in every sense of the word, so that it was quite natural for me to ask him to write and tell me how he got along in the hardware store that he was going to work in, in the other town.

I had in stock here at that time a certain combination gasoline and coal oil stove that I thought was a dead one. He and I had talked that stove from every possible angle, so we thought, and still it would not go. I had my mind made up to buy no more and was even feeling around to find out whether or not the house would take back the few that I had in stock. Well, this man had not been on his new job for more than two weeks before he wrote me a letter that made me see the light. He informed me that that same stove was the best seller in that store, and he told me why. He also added that a stove that was my best seller here had been dragging on them until he had gotten busy and applied the methods that he and I had used in Palmerston on it, when, lo and behold, it sold like hot cakes. His advice to me was to reverse the process and to apply their methods to the line that had been going so poorly in Palmerston. I followed his advice, and instead of closing out the line, I have been a heavy buyer ever since.

The reason for my previous failure was simply this. Both my lines were good stoves, but one of them had been in general use hereabouts for years, was well known and commended; the other was quite as good and was well known in some parts of the country, but was not in this district. When a woman wanted a stove it was a case of "Well, I've used the other stove so long that I don't feel like changing," or, "Mrs. So-and-so says that you can't do anything with those combination stoves and that they're dangerous." My arguments had never made any impression on them.

Following Sam's advice, I sent in to the manufacturers and got all the possible information, literature, etc., that was out on that stove. Then, for the first time, I really explored the inwards of that stove and found out what made it tick. In short, I knew my goods. Then I got busy on a demonstration. I wrote, I 'phoned, I circularized, and I told everyone of the great stove that I had and of the big stove day that I was going to pull off. It worked. I demonstrated to the people who came, not only on that, but on every day that I found a listener, why, for certain people and under certain conditions, that stove was better than the other one, and did it all without taking away from the attractiveness of my other stove, which was of an entirely different type. I harped on the convenient and the economical points and they stuck. I had held demonstrations before, but not in this way. I studied my product so that I could put enthusiasm and human interest into my arguments.

Since that eventful sale, my old clerk and I have kept up a regular correspondence course in selling ideas, and many the old line have I worked off in consequence, and I believe that he and his employer have been able to use some of my ideas to the same end. It would be a great thing if our associations emphasized this team work more strongly, so that each of us could benefit by the other's experience, either to repeat or avoid them, as the case might be.

There is one very impressive fact about demonstrations that has made a thorough convert of me. It is this: whenever my competitor gives a demonstration in any given article, my sales in it drop away below par. I don't have to explain the lesson of that; it stands on its own feet.

Of course, some lines cannot be as easily demonstrated as others; but there are more ways of killing a cat than choking it to death on butter. There are auto accessories, for instance. I cannot demonstrate the actual use of them in my store, nor can I afford to keep a car running for the education of the public. But I can advertise and I can make a prominent window and shelf display of these lines and point to the successful use of them that is being made by local car owners. Everyone is interested in an auto, because few men are so poor but what they hope to have one some day; consequently it is not hard to advertise a line of goods that people are naturally interested in. They pass a surprising amount of it around from hand to mouth. Everyone commented favorably upon my action in first laying in the line.

It is, by the way, a very profitable line, for on whistles alone I make as much as five dollars each.

I find the same fact to be true of most specialty lines; it is to them that we must look to bring us out on the right side of the ledger at the end of the year, and of them all, I find auto accessories, more particularly Ford's, the most profitable.

My stock of goods is a very modest and inexpensive one, but I make a frequent turnover on it, and owing to the fact that I am known to sell some accessories, am constantly receiving orders for others that I do not carry; all of which is pure velvet, as I am not under the expense of carrying the stock. It is the less important and cheap parts that require replacing in a hurry. The more expensive parts are durable and replacements are usually ordered weeks ahead of the time that they will go into use, so that my delay in sending to Toronto or some other jobbing center is never commented upon.

I carry in stock inner tubing, a few tires, dry cells, anemometers, spark plugs, vulcanizers, cotter pins, patching cementless rubber, carbide, gasoline, lubricating oils, etc. The two latter items, of course, are sold for a variety of other purposes than motor use, all of which is very beneficial to me. On the one item of cotter pins, I make a very neat profit. They are small and comparatively cheap, but the quantity that goes into the upkeep of the average car is astonishing and the profit equally so.

I have made a special showcase for my auto lines that I use in connection with shelves and windows for display

Cash vs. Credit in a Country Town

Hardware Merchant Gives Views Regarding Cash and Credit Systems—Believes There Should be More Co-operation Among Retailers.

An authorized interview by a Hardware and Metal representative with W. H. Davidson, Paisley, Ont.

TIMES have changed since the farmer only received his money once a year, when he sold his crop in the fall. Now, what with mixed farming, cattle feeding, hog raising and so on, he has sources of income that bring money to him at all seasons of the year. The one item of dairy products alone is sufficient to cover the cost of the small purchases of many families. Stove wood and saw logs are another item that bring in a considerable winter income to the farmers of this vicinity, at least. Also, in the spring there is the sale of wool and lambs to help out. Horse raising is also becoming quite an industry; last year one man near here sold nine hundred head of horses in the various markets around Ontario.

Such being the case, it appears to me that the time is ripe for merchants to get together and educate the farmers to the idea of paying cash instead of asking for credit. It was all very well when we had to extend credit; at least we made a bigger profit in those days, but as I have pointed out, the necessity no longer exists, and furthermore, prices have reached such a point that we can no longer afford to carry a customer over a long period of time, because the profit disappears in the interval.

The average city dealer who sells to other business men, office and factory help, usually sells on a cash basis because his trade has a regular income. Now, I cannot see that the position of the country merchant differs so greatly but what he can go on a cash basis too. The farmer now gets his money with almost the same degree of regularity that the city worker does, and I believe that he can be made to pay in the same way if enough of us get together and insist upon it. Even though they should be educated, as a first step, only to giving their notes for overdue accounts, something would have been accomplished. I notice that the machine agents, Massey-Harris and others, get a small cash payment and the balance in notes that are a first lien, on every sale that they make.

The farmers have become so accustomed to making us wait that a bill that is a year old is nothing to them. It is almost a science with some of them. They buy from the merchant and put off payment for so long that the latter has to go to the bank and borrow to carry the load. It resolves itself into a case of the merchant paying the customer's interest, for the latter can rarely be depended upon to pay any interest to the merchant on the old bill. My banker tells me that I should send my delinquent customers around to him; that there is hardly a man around that he would refuse seventy-five to a hundred dollars to in order to meet his obligations. But that is the point at which most of them balk. They intend to pay in their own good time doubtless, but they refuse to borrow to do so. They much prefer that the merchant pay interest at the bank rather than that they should. I don't find it so much a case of lack of ability to pay as a lack of inclination to do so. Other things have changed as a result of new conditions, and I see no reason why this imposition should not be done away with. I should most certainly refuse to extend any credit if I were to start up a new business to-morrow; but having an old one on my hands, I am held down to a great extent by my past practice and the manner in which other retailers in this town and in Ontario and Canada generally are doing.

In the same connection, I believe that even under the present custom some preference should be shown the occasional cash customer. There is all the difference in the world in selling a man a half ton of wire and making two dollars in profit on the sale and selling another man that same thing and then waiting a year for the money. In the latter case the profit disappears, and yet we charge them both the same price. It is not just at all. It appears to me that a discount of some kind should be in order for the cash customer; either a sliding scale that takes into account the amount of the purchase and the variety of goods sold, or else a flat rate, and in the latter case trust to the law of averages to even things up. A man could give a ten per cent. discount on a purchase of coat-hooks and padlocks, for instance, but nails, butts, pails, and other staples could not stand such a cut unless the customer came back again and bought some of the more profitable lines.

I ran a cash sale this spring on one article that I knew my trade would be buying heavily; namely, woven fence wire, and I had no trouble at all in getting cash, once the idea was explained to my customers. We sold nearly six miles of this fencing on this basis between April 1st and June 1st.

I believe that many country merchants carry on their books, accounts that equal their stock in value and in some cases greatly exceed it, and instead of the proportion growing smaller, it is on the increase. If allowed to grow unchecked, this condition will destroy those who created it.

The retail association discussed the subject a year ago, but did not really go into it thoroughly, and on the occasion of the last meeting the subject was barely mentioned, which fact should be greatly deplored. I believe that the Alberta association has inaugurated some very good collection measures since the occasion of its recent meeting out West; but however admirable those measures may be, they are of a purely palliative nature, and the real need is for stern corrective and remedial measures. It is very praiseworthy to seek to collect old debts, but it is much more vital to do away with the making of new ones and so destroy the very root of the trouble.

I believe that the desired end can be reached eventually by the merchants of any one town getting together and forming a local Credit Men's Association. It has been tried and successfully worked out in a number of cities and towns, and the resultant exchange of ideas and information about customers should prove invaluable to us. The organization required for a small town would not be costly, and the object of it at first should be the exchange of credit news regarding customers, and the approach to a cash system could thus be made gradually.

If Robinson is paying me for his hardware and is letting his grocery bills stand at Smith's store, the latter would be better able to handle the delinquent if he should be informed that I was getting my money. Our secretary could keep a close check on all business transactions, court records and credit news generally, and give each member a weekly copy of same. The members could meet at regular intervals and discuss the questions of the moment and help one another generally.

I think that the only thing that has prevented the universal growth of such organizations as the one that I have outlined is the fact that most of us are more

HARDWARE AND METAL

VOL. XXVI. No. 26 Toronto, Canada, June 27, 1914 Two Dollars per Year

THE BUSINESS SITUATION

WESTERN reports this week indicate a more optimistic feeling among Western hardware and paint dealers. Favorable crop conditions and weather have had a good effect on trade generally. Orders, of course, are still small, and are of a hand-to-mouth character. Reports from the East show that although orders are not large they are quite numerous, and a very fair volume of business is passing. Business at Toronto is inclined to be dull, although hardware jobbers are not complaining to any great extent. Probably the most complaints are heard from those engaged in the metal business. Owing to lack of orders and the shrewdness exhibited by those who are in the market for metals, there has been keen competition, resulting in a great deal of price shading.

Competition from other countries has also been felt to a great extent. Buying of metals is still of a hand-to-mouth character, and many large manufacturing firms are buying in much smaller quantities than for many years past. The usual summer-month slackness in business is setting in and is being felt a little earlier in the season than last year. Stove manufacturers note a falling off in the demand for summer stoves and supplies, but these lines are just moving nicely off the retailers' shelves. Paint manufacturers have been busy, although a falling-off in trade is now noticeable. Many retailers, some of whom are located in cities where conditions have been said to be bad, state that business so far this year will compare favorably with previous years. One good feature is that the retail trade has been doing business on light stocks and many merchants have worked off overstocks which had been on hand, in some cases for three or four years. This will have a good effect on trade generally, especially later on when conditions improve.

THE AD CLUB CONVENTION

ONE of the biggest and most important conventions ever held in Canada has been in session all this week at Toronto. It is the annual convention of the Associated Advertising Clubs of the World, the personnel including prominent retailers, manufacturers' representatives, newspaper, trade paper, magazine and advertising men from almost every walk of life and from many countries.

This ad. convention is important to the trade inasmuch as it is working for the elimination of objectionable and untruthful advertising. From the discussion that took place at the sessions attended by the writer, it is plain that this is the real question of the hour so far as these associated advertising clubs are concerned. Honest advertising men, whether they purchase or sell space, are anxious to see all advertising mediums purged of fraudulent statements and schemes and in the dawn of the better day the retail merchant is taking a prominent stand.

At the sessions on Retail Advertising at the big convention it was a noticeable feature that United States' retailers were quite frank in giving all advice and suggestions within their experiences to the open meeting. If one had tried and found a certain method to be a failure, he was straightforward in making it known for the help of his confreres. If another method had proved successful, he was willing to give his brother merchants the benefit of his experience. Knotty problems are discussed and often solved in a business-like manner; old-time narrowness was nowhere in evidence. It would be hard to place an estimate on the value of the retail session to the retail merchants. Men of many years' experience,—men who had spent thousands of dollars in perfecting their selling and advertising organizations were present to give their experiences for the benefit of others. The most lamentable feature of the whole Convention, as far as the Canadian hardware trade is concerned, was the absence of the Canadian hardwaremen. With three or four exceptions—and the exceptions are men who are making a record in Canadian hardware retailing—no Canadian hardwaremen were present.

THE HOUSE FLY

THE public is slow to take hold of anything, but once it does it goes into it most thoroughly. When the first talk of a swat-the-fly campaign was raised, people were inclined to treat it as a joke. They recognized in a way that there was a lot of common-sense behind the idea, but they were not inclined to take it seriously. The persistency with which the idea was exploited, however, carried conviction with it, and to-day people the world over are industrially aiding in the fly hunt.

The results of the campaign, we believe, have been eminently satisfactory. The fly is in no danger of becoming extinct, but he has not the freedom that once was allowed him. He is barred from the home and given a hard run for his life if he obtrudes himself too closely around the haunts of men. With public interest thoroughly aroused, it is quite probable that precautions will be kept up, which will rigorously exclude the dangerous house-fly.

From the standpoint of the retail hardware men the fly campaign has been doubly satisfactory, as it has created a heavy demand for fly swatters, screens, traps and similar articles which sold in comparatively small volume before.

AN ERA OF CO-OPERATION

THERE is still great room for further interest in association work on the part of the retail trade. Every merchant should associate himself with an organization endeavoring to place the retail business on a higher plane. Many writers refer to the present age "as an age of competition," but they could go further and refer to it as an "age of co-operative competition. Co-operation is the bond that holds together the social, religious and economic life of the country. It enters into family affairs, religion, sport, business and professional life. One can scarcely think of a single phase of the activities of life which is not influenced to a very considerable degree by the principle of co-operation.

Co-operation is practical, logical, workable and will do for the retail hardwaremen of Canada what it has done and is doing for thousands of other men in other lines of business and what it is doing constantly as a motive power in all phases of life.

Some men there are who stand out like giants above their fellows. Such sometimes say: "What need have we for co-operation—we are a law unto ourselves—we do not ask assistance and will give none." This is only half true. Every man is dependent on others for many things, and each consequently owes to his fellows all he can give them of inspiration and service. A strong organization of merchants would be merely a working out of the truth expressed by Kipling in his wisdom-packed poem:

"Now this is the law of the jungle, as old and as true as the sky
And the wolf that shall keep it may prosper, but the wolf that shall break it must die,
As the creeper that circles the tree-trunk, so the law runneth forward and back,
For the strength of the pack is the wolf, and the strength of the wolf is the pack."

Not dependence, but interdependence is the gospel we should preach. Not merely competition but "co-operative competition" is the life-spring of modern business.

WHEN MONEY IS VALUABLE

WHAT IS MONEY? In the ordinary sense it is a standard of value which can be transferred to discharge an obligation. The value of money and its service is defined by the number of times it is put to use. A dollar which lies in the pocket or in the bank for a month is a dollar at the end of the month. If that same dollar is put into circulation and changes hands say ten times, it has discharged ten debts and on the face of it would seem to represent not one dollar but ten dollars.

Apply this theory to such conditions as are general at the present time. There is to start, a development in the financial market which proves a scare more or less to the what money they have and as long as they sit tight on it, it is not doing the work it might do in settling obligations. The banks hold on to what money they have; loan companies hold to their assets; individuals follow the example and hang on to what they have—and the first thing we know there is hard times.

If people would consider that every time a dollar changes hands it is worth a dollar, we might get more money into circulation. This is a homely theory of finance but it is one that indicates some of the troubles of to-day.

THE WESTERN CROPS

BUSINESS in general throughout Canada has at least one eye on the Western crop situation at present, and the prospects are continuing of the most encouraging sort. Latest reports indicate that needed rains have been general and the plant is reported to be in good condition with fifteen to twenty inches growth in most districts. There has been some damage by hail, but this has not been extensive, and there appears to be every indication for the biggest yield of wheat that the history of the West has shown. But while the Western prospects should be a favorable influence with trade in general, and while a big crop will be a great boon to the country as big crops always are, too much must not be looked for from this source with the downward trend of prices—the price is just as an important a factor in relation to the wheat crop as the yield.

In the States there is the biggest crop of history being harvested with the result that the prices for wheat have gone lower than they have been for the past eight years. Canadian markets were slow to sympathize in the decline on account of the present high cash prices, but with the recent rains in the West and the assurances of perhaps the biggest crop in the history of the country, the market has not been slow to act and the prices have shrunk two cents during the past week.

Let us just for a moment consider what this change in price means. Many of the uninitiated will be too much inclined in thinking of the price of wheat to refer to it as something like gold dust taken right out of the ground, without taking into consideration the elements of cost—the capital investment in land and implements, the seed, harvesting, threshing, labor, and cost of transportation.

To bring the whole matter down to a scientific, financial basis we find that the Saskatchewan commission on agricultural credits, after a world-wide inquiry, reached a basis for the cost of the production of wheat in Saskatchewan of something like 65c a bushel. At the present time the quotation for December options is 81c at Winnipeg. If we take 65c as a basis of cost, and add to that figure 12c, as being the transportation from the wheat field to the head of the lakes (and it is on this figure that the Winnipeg price is based), we find that the profit to the farmer at the present price is, roughly speaking, four cents a bushel; and there would appear to be chances for the prices to go lower. The two-cent decline of a week then might mean a shrinking of a third of the profits. This, in brief, is summing up the arguments which have been largely responsible for the marked increase in the development of recent mixed farming in the West.

EDITORIAL BRIEFS

THE WINDOW THAT does not increase the profits is not properly attended to.

* * *

A FLAG OR TWO in the window between now and July 1 will give it an appropriate Dominion Day flavor.

* * *

TO TRAVEL THE ROAD to successful stove salesmanship requires ambition, intelligence, conscientiousness, perseverance, tact and patience.

* * *

THE DIFFERENCE between success and failure in the retail business is very often the difference between knowing and guessing.

Tariff Changes Affecting Canadian Hardwaremen

Lines in Which Hardwaremen Are Interested Affected by Tariff Changes—Tables Showing British Preferential, Intermediate and General Tariffs.

THE Customs Tariff Act, 1914, was assented to 12th June, 1914, and count of the many changes in the tariff on lines in which the hardware trade is directly interested, Hardware and Metal is publishing in full the portions of the act which affect hardware and metal lines; also tables showing the British preferential, intermediate, and general tariff. The April 11 issue of Hardware and Metal contained a report of the budget speech and gave in full the tariff changes announced.

A memorandum sent out recently by the Department of Customs draws attention to the fact that iron or steel wire numbers nine, twelve or thirteen gauge admitted free under Tariff Item 404, should be described on the face of the Customs entry as "not for use in telegraph or telephone lines.

The information as sent out for the guidance of customs officers will prove useful to the trade.

HIS Majesty, by and with the advice and consent of the Senate and House of Commons of Canada enacts as follows:—

1. This Act may be cited as *The Customs Tariff Act*, 1914.

2. Section 7 of *The Customs Tariff*, 1907, chapter 11 of the statutes of 1907, is repealed and the following is substituted therefor:—

"7. Goods imported into Canada, the product or manufacture of any foreign country which treats imports from Canada less favorably than those from other countries, may be made subject by order of the Governor in Council in the case of goods already dutiable to a surtax over and above the duties specified in Schedule A to this Act, and in the case of goods not dutiable to a rate of duty, not exceeding, in either case, twenty per centum ad valorem.

2. Goods the product or manufacture of any foreign country imported into Canada in vessels admitted to registration under the laws of such foreign country may, if such foreign country imposes higher duties of Customs upon goods imported into such country in vessels registered in Canada than upon the like goods when imported in vessels of such country, be made subject by order of the Governor in Council in the case of goods already dutiable to a surtax over and above the duties specified in Schedule A to this Act, and in the case of goods not dutiable to a rate of duty, not exceeding, in either case, twenty per centum ad valorem.

3. Within the limitations in this section hereinbefore prescribed any such goods may by such order in council be made subject to a surtax or rate, as the case may be, differing from the surtax or rate to which another class of goods may be thereby, or by any other such order, made subject.

4. The Governor in Council may make regulations for carrying out the purposes of this section and may by order in council suspend the surtax or rate in whole or in part from application to the goods of such foreign country or any class of such goods.

5. The decision of the Governor in Council shall be final on any question which may arise regarding the application of the surtax or rate imposed pursuant to this section."

DRAWBACK ON PIG IRON.

3. Section 10 of *The Customs Tariff*, 1907, chapter 11 of the Acts of 1907, is amended by adding thereto the following subsection:—

"2. If pig iron imported into Canada mixed with pig iron made in Canada has entered into the manufacture of mowing machines, reapers, harvesters, binders and attachments for binders, the drawback payable in pursuance of this section, under regulations by the Governor in Council, may be computed on the total quantity of pig iron, including pig iron made as aforesaid entering into such goods; Provided, however, that the total drawback payable shall not exceed ninety-nine per cent. of the duty paid on all the pig iron imported and used by the manufacturer of such goods in manufacturing such goods and other goods."

4. The Governor in Council may by order in council direct that there be substituted for tariff item 379 in Schedule A of *The Customs Tariff*, 1907, and the several rates of duties of Customs set opposite said item in Schedule A the following:—

Tariff Item.		British Preferential Tariff	Intermediate Tariff.	General Tariff.
		$ c.	$ c.	$ c.
379	—Rolled iron or steel angles, beams, channels, and other rolled shapes or sections, of iron or steel, not punched, drilled or further manufactured than rolled, weighing over one hundred and twenty pounds per lineal yard, n.o.p. not being square, flat, oval or round shapes and not being railway bars or rails ....per ton	2 00	3 00	3 00

2. From and after the publication of such order in council in *The Canada Gazette* tariff item 379 as it appears in said schedule at the time of the passing of this Act shall be repealed and the provisions of the said tariff item as it appears in the last preceding subsection of this section shall be substituted therefor.

3. The Governor in Council shall not direct that such provision shall be substituted as aforesaid unless and until the governor in Council is satisfied that rolled iron or steel angles, beams, channels and other rolled shapes or sections of iron or steel weighing one hundred and twenty pounds and less per lineal yard are manufactured in substantial quantities in Canada from steel made in Canada.

5. Schedule A to *The Customs Tariff*, 1907, as amended by chapter 15 of the Acts of 1913, and by orders in council is further amended by striking thereout tariff items:—113, 184, 208, 210a, 296, 306, 315, 361, 375, 398, 404, 410, 411, 445, 446a, 460, 471, 486, 542, 543, 545, 546, 575, 577, sections (*a*) and (*d*) of the orders in council dated 11th August, 1908, designated as items 717 and 720 of *The Customs Tariff*, the several enumerations of goods respectively, and the several rates of duties of Customs, if any, set opposite each of said items, and the following items, enumerations and rates of duties are inserted in said Schedule A:—

Item. Tariff.		British Preferential Tariff	Intermediate Tariff.	General Tariff.
157a	—Amyl alcohol or refined fusel oil, when imported by the Department of Inland Revenue or by a person licensed by the Minister of Inland Revenue, to be denatured for use in the manufacture of metal varnishes or lacquers, to be entered at ports prescribed by regulations of the Ministers of Customs and Inland Revenue, subject to the Inland Revenue Act and to the regulations of the Department of Inland Revenue.....	Free.	Free.	Free.
178a	—Provided that on the goods specified in item 178 and imported by mail on and after first day of July, 1914, duties may be paid by Customs Revenue stamps, under regulations by the Minister of Customs, at the rates specified in said item, except that on each separate package weighing not more than one ounce the duty shall be....each	1 cent.	1 cent.	1 cent.
208	—Boracic acid and borax in packages of not less than twenty-five pounds weight; hydro-fluosilicic acid; oxalic acid; tannic acid; ammonia, sulphate of; sal ammoniac and nitrate of ammonia; cyanide of potassium; cyanide of sodium and cyanogen bromide for reducing metals in mining operations; antimony salts, viz:—tartar emetic, chlorine and lactate (antimonine); arsenous oxide; oxide of cobalt; oxide of tin; bichloride of tin; tin crystals; oxide of copper; precipitate of copper; crude; sulphate of copper (blue vitrol); verdigris or subacetate of copper, dry; sulphate of iron (copperas); sulphate of zinc; chloride of zinc; sulphur and brimstone, crude or in roll or flour; cream of tartar, in crystals or argols; tartaric acid crystals; iodine, crude; bromine; phosphorous; sulphide of arsenic; carbon bisulphide	Free.	Free.	Free.
208a	—Chloride of lime and hypochloride of lime:—			
	1. When in packages of not less than twenty-five pounds weight each..... ....per one hundred pounds	10 cts.	15 cts.	15 cts.
	2. When in packages of less than twenty-five pounds weight each	17½ p.c.	25 p.c.	25 p.c.

Tariff Item.		British Preferential Tariff	Intermediate Tariff	General Tariff.
210a	—Caustic soda :— 1. When in packages of not less than twenty-five pounds weight each ..... per pound	1-5c.	3-10c.	3-10c.
	2. When in packages of less than twenty-five pounds weight each	17½ p.c.	25 p.c.	25 p.c.
296	—Flint, ground flint stones; felspar, fluorspar, magnesite; mica schist; cliff, chalk, china or Cornwall stone, ground or unground, refuse stone, not sawn, hammered or chiselled nor fit for flagstone, building stone or paving	Free.	Free.	Free.
315	—Carbons over three inches in circumference or outside measurement and not exceeding thirty-five inches in circumference or outside measurement.....	Free.	Free.	Free.
315a	—Carbon electrodes exceeding thirty-five inches in circumference or outside measurement	12½ p.c.	20 p.c.	20 p.c.
327a	—Silvered lenses for automobile lamps ..	10 p.c.	15 p.c.	15 p.c.
353a	—Aluminum leaf or foil	Free.	Free.	Free.
361	—Gold and silver leaf; Dutch or schlag metal leaf; brocade and bronze powders.....	15 %	27½ %	27½ %
375	—Iron in pigs, iron kentledge, and cast scrap iron; ferrosilicon containing not more than fifteen per cent. silicon; ferromanganese and spiegeleisen, containing not more than fifteen per cent. manganese ..... per ton	1 50	2 50	2 50
378a	—Galvanized rolled hoop iron or hoop steel, numbers twelve and thirteen gauge ..... per ton	$4.25	$7.00	$7.00
398	—Wrought or seamless iron or steel tubing plain or galvanized, threaded and coupled or not, over four inches in diameter, but not exceeding ten inches in diameter, n.o.p.	20 p.c.	30 p.c.	30 p.c.
398a	—Wrought or seamless iron or steel tubing, plain or galvanized, threaded and coupled or not, over ten inches in diameter, n.o.p.	10 p.c.	15 p.c.	15 p.c.
404	—Galvanized iron or steel wire, curved or not, numbers nine, twelve and thirteen gauge with variations from such gauges not exceeding four one-thousandths of an inch and not for use in telegraph or telephone lines .	Free.	Free.	Free.
410	—Coil chain, coil chain links including repair links, and chain shackles, of iron or steel, one and one-eighth of an inch in diameter and over	Free.	5 p.c.	5 p.c.
410a	—Coil chain, coil chain links including repair links, and chain shackles, of iron or steel, n.o.p.	15 p.c.	20 p.c.	20 p.c.
411	—Malleable sprocket chain, and link belting chain of steel, when imported by manufacturers of agricultural implements for use in the manufacture of such implements in their own factories.....	Free.	Free.	Free.
445	—Mowing machines, harvesters, self-binding or without binders, binding attachments, reapers, and complete parts thereof, not including shafting or malleable iron castings; also finished parts for repairs of the machines specified in this item	12½ %	12½ %	12½ %
445a	—Malleable iron castings when imported by manufacturers for use exclusively in their own factories in the manufacture of mowing machines, harvesters, binding attachments and reapers.	15%	17½ %	17½ %
446a	—Traction ditching machines (not being ploughs) adapted for tile drainage on farms, valued by retail at not more than three thousand dollars each, and complete parts thereof for repairs ...	Free.	Free.	Free.
453a	—Electric dental engines	15%	27½ %	27½ %
460	—Sundry articles of metal as follows, when for use exclusively in mining or metallurgical operations, viz.:— Diamond drills, not including the motive power; coal cutting machines, except percussion coal cutters, coal augers and rotary coal drills; coal heading machines; core drills; miners' safety lamps and parts thereof, also accessories for cleaning, filling and testing such lamps; electric or magnetic machines for separating or concentrating iron ores; furnaces for the smelting of copper, zinc and nickel ores; converting apparatus for metallurgical processes in metals; copper plates, plated or not; machinery for extraction of precious metals by the chlorination or cyanide processes; amalgam safes; automatic ore samplers; automatic feeders; retorts, mercury pumps; pyrometers; bullion furnaces; amalgam cleaners; blast furnace blowing engines; and integral parts of all machinery mentioned in this item	Free.	Free.	Free.
471	—Rolled round wire rods in the coil, of iron or steel, not over three-eighths of an inch in diameter, when imported by wire manufacturers for use in making wire in the coil in their own factories ..... per ton	$2 25	$3 50	$3 50
471a	—Rolled round rods in the coil, of iron or steel, whether annealed or cleaned, or not, when imported by manufacturers of chain in their own factories in the manufacture of chain .....per ton	$2 25	$3 50	$3 50
478a	—Iron or steel bands, strips or sheets, number fourteen gauge or thinner, coated, polished, or not, and rolled iron or steel sections, not being ordinary square, flat or round bars, when imported by manufacturers of saddlery hardware and hames for use exclusively in the manufacture of such articles in their own factories..	Free.	Free.	Free.
486	—Iron tubing, brass covered, not over three inches in diameter, and brass trimmings, not polished, lacquered or otherwise manufactured, when imported by manufacturers of iron or brass bedsteads for use exclusively in the manufacture of such articles in their own factories	Free.	Free.	Free.
494a	—Cork slabs, boards, planks and tiles produced from cork waste or granulated or ground cork	20 p.c.	30 p.c.	30 p.c.

2. Schedule B to *The Customs Tariff*, 1907, is amended by striking thereout tariff items 1017 and 1019, the several enumerations of goods respectively, and the several rates of drawback of Customs duties set opposite each of the said items, and the following items, enumerations, and rates of drawback of Customs duties are inserted in said Schedule B :—

Item No.	Goods.	When subject to Drawback.	Portion of duty (not including special duty or dumping duty) payable as Drawback.
1017	—Lapwelded tubing of iron or steel, not less than four inches in diameter, threaded and coupled or not.	When used in casing water, oil and natural gas wells, or for the transmission of natural gas under high pressure from gas wells to points of distribution	
1019	—Bituminous coal	When imported by proprietors of coke ovens and converted at their coke ovens into coke for use in the smelting of metals from ores and in the melting of metals.	50 per cent.
1021	—Rolled round wire rods in the coil, of iron or steel, not over three-eights of an inch in diameter.	When used in the manufacture of galvanized iron or steel, wire, curved or not, numbers nine, twelve and thirteen gauge, with variations from such gauges not exceeding four one-thousandths of an inch...	99 per cent.
1022	—Charcoal	When used for the smelting of metals from ores	99 per cent.
1023	—Rolled hexagon iron or steel bars.	When used in the manufacture of cold drawn or cold rolled iron or steel bars...	99 per cent.

COMMENCEMENT OF ACT.

6. This Act shall be held to have come into force on the seventh day of April, one thousand nine hundred and fourteen, and to apply and to have applied to all goods mentioned in the preceding section imported or taken out of warehouse for consumption on and after that day, and to have also applied to such goods previously imported for which no entry for consumption was made before that day.

Provided, however, that notwithstanding any increase in Customs duties under this Act, all goods actually purchased on or before the sixth day of April, one thousand nine hundred and fourteen, for importation into Canada, on evidence satisfactory to the Minister of Customs of the purchase having been so made, and all goods in warehouse in Canada on such day, if entered for duty after importation prior to the first day of July, one thousand nine hundred and fourteen, may be entered at the rate of duty in force on the said sixth day of April, one thousand nine hundred and fourteen.

Advertising Methods for the Retail Merchant

The Humble Dodger and the Small Catalogue, Supplemented by Service of the Broadest Description Offer Splendid Advantages —Close Attention to Detail.

Written for Hardware and Metal by R. P. Hawkyard, Advertising Manager H. S. Howland, Sons & Co.

THE time has passed when anyone has to be convinced of the value of advertising. It is now merely a question of how best to go about the task of setting one's wares before the public. Opinions differ on the question, but I am quite sure that a large part of the trade will agree with my ideas which are the result of a close study of and a first-hand acquaintance with the subject.

The city hardwareman occupies a slightly different position from that of his country cousin. His competition is quite likely to be keener. his customers more critical and harder to satisfy. As a result of such conditions, the stern necessity of extensive advertising is the more apparent. His ads must appear with the regularity of clockwork. They must be descriptive of the goods and impress the reader with the advantages that they offer him. Economy and utility are two catchwords that should never grew mouldy in the mouth of the wise advertising man. The small town and country dealer is less restricted. He can by the use of one or two papers reach the homes of practically every possible customer in his community.

But the humble dodger and the small catalogue, supplemented by service of the broadest description, offer advantages possessed by no other method, the best of which, particularly in the case of the former, is its comparative cheapness.

The result to be desired in advertising is that a certain man or firm, dealing in a certain article may so impress his goods upon the public mind that his name may become synonymous with that of the article in queston. He may even seek to create the demand for it in order that he may fill the same. In either case, no other method is quite so satisfactory as the well gotten up circular. The practice of this method should not be desultory and intermittent in its application. It should be most consistently and steadily applied, so that in the fullness of time the possible customers of that town or district know beyond peradventure that Smith is a hardware dealer, with a store on Main street, and that he promises good values and honest service, and last, but not least, sends out a weekly list of attractive hardware news with the regularity of a newspaper.

The first appearance of the little sheet may not create a stir. But it is there, and even though the Brown baby may chew it up or Johnny use it for cigarette paper, it has been brought to the family's notice and has not lived in vain. By the time that that family has been accustomed to receiving that humble journal regularly, it begins to look forward to the event and to discuss the bargains contained therein. There will be no mad rush. Smith need not ask for police protection to save him from hungry buyers. But there will be a constant and ever-growing association of Smith with hardware in people's minds, and the longer it goes, the stronger that association will become and the more people it will affect. If the advertising is continued with steady force, Smith or his heirs will be drawing dividends on that baby's lunch for many years to come.

But there must be system and intelligent co-operation of all departments to get adequate returns on the advertising outlay. It is not sufficient to merely peddle the circulars. They should be distributed—a vast difference. Better send out a high priced and gentlemanly clerk who will hand the little papers direct into the hands of some member of the household rather than to trust them to the tender mercies of some careless boy, who will consider his duty well done if he impales an occasional circular on an iron fence post or throws it on a lawn. The dodgers are cheap enough in all conscience, but if they are worthy of printing, they are worthy of delivery by an intelligent man, or by mail. They deserve a better fate than to be left lying around a warehouse or blown about a lawn.

Freak advertising is inadvisable, but catchy headlines that have a direct bearing on the question in hand can frequently be used to great advantage, the better to attract Brown's attention to the good copy below. However, we have only got that gentleman into the buying notion so far. The sale is yet to be made. It is at this point that the co-operation comes in. Brisk advertising and a later apathetic indifference to results make poor bedfellows. A smart window to greet Brown's eye as he approaches the door, a courteous and well-informed man to greet him as he steps inside a clean and well ventilated building, properly heated in winter and cooled in summer, form the successive links of the chain that has been forged to make a sale. What use to spend good money advertising, only to have Brown go away unsold and disgusted with some condition that he found to exist in the store? Better to have left him in a state of benighted ignorance, which, if it had known no good, at least knew no evil of the store. The lack of proper team work between the advertising and the selling end is a source of constant surprise to a close observer.

A close attention to detail all the way down the line is the only thing that will make the best of advertising a success. Witness the case last month of a man who is really one of the most progressive hardware merchants of Ontario. He got out two thousand splendid folders that were in line with his progressive ideas. They were labeled "Good Service" and dwelt upon the close attention he paid to a customer's wants, in the store, in delivery, etc. It was very catchy. But in order to save the printer's charge of two dollars for proper folding, he had it done in the store. The job was carelessly done, and took away from their otherwise neat appearance. Two weeks after the date of distribution several hundred of them were still on hand. They were simply dead waste. In spite of these errors, the circulars added materially to the sales. But at that, fifty per cent. efficiency was lost. Such things are distressing to any advertising man's heart. Here was a rattling good circular, well printed on good paper, attractively gotten up, with a careful description of priced articles, which was robbed of half its pulling value through lack of good distribution and a hard follow-up campaign.

Well gotten up catalogues run the dodgers a close race for first place on the advertisers' roll of honor. At one stroke, they rob the mail order business of half it's terrors.

I know of one case that occurred this spring that serves to illustrate this argument. A wide-awake dealer in a small country store got out one thousand 48-page catalogues that he mailed to his customers. To say that he is now an enthusiast on the subject would scarcely describe it. He plans to issue a larger one next spring. This man had the

nerve to spend one hundred and seventy-five dollars on what was to him an experiment.

Personally, I have found that the best results may be obtained by a combination of catalogue and dodger advertising. This is particularly true of country districts. The compilation of either should be strictly a one-man job, so that the advertising may be done on consistent lines. A systematic and sane campaign on such lines must lead to results that are too far-reaching to be tabulated.

Such is my own opinion, which naturally conforms to the policy of H. S. Howland, Sons & Company. Our own policy lies along the lines here described and I believe that our relation to the retailer corresponds to that of his relation to his customer. Believing in the catalogue as we do, we make a practice of sending out a monthly one popularly known as Howland's Bulletin, and in its pages display our wares by cuts and descriptive phrasing to our customers. In one sense of the word, we feel the attention to be a courtesy due them for their patronage and we are well rewarded for our efforts both by the increased trade that we receive and by the closer relations that grow up between us and our customers as a result of our progressiveness.

COST OF DOING BUSINESS.

AN INTERESTING angle on retail-price maintenance is given by Farm Implement News, which says, in a recent editorial, that many manufacturers, in fixing retail prices, fail to show a knowledge of or respect for the expenses of the retail distributer.

"One obstacle to the success of any plan which contemplates the fixing of retail prices by the manufacturer is the ignorance of many manufacturers concerning the dealer's cost of doing business. We refer to manufacturers in general and not to any one class. A friend of the writer, who is engaged in the drug business, recently was solicited to stock an article on which the manufacturer had set a retail price of 25 cents. The manufacturer himself solicited the business. He quoted the dealer a price of 20 cents, and when told that the cost of doing business was about 22 per cent., expressed great surprise. He thought it was ten per cent. or less.

"Merchants in other lines say that many of the trade-marked food products and other household goods are priced at figures which afford the dealers no profit. The highest margin in the list was 16 2-3 per cent., and the assertion was made that no dealer handling the classes of goods listed can do business at less than 17 per cent. Yet these goods are so well advertised that the public constantly calls for them. The dealer cannot obtain a higher price than the manufacturers have fixed, because the prices are printed on the packages.

"In view of the publicity given in recent years to the cost of doing business in the retail implement trade, one would be justified in expecting any implement manufacturer who wishes to dictate or suggest retail prices to select prices which would afford the dealer an adequate margin. Yet one implement concern which this year issued a retail price-list showed woeful ignorance on this point. For instance, a machine which is sold to dealers at $85 was priced to retail at $92; another for which the dealer was asked to pay $31 was priced at $34. In short, there was only one machine in the entire list which has been given a retail price affording more than 15 per cent. margin, and most of them afforded less than 15 per cent. With the cash discount deducted, the average margin on the lot was about 16 per cent., which is the average cost of doing business in the retail implement trade, taking it the country over. Thus the dealer, selling at the prices fixed by the manufacturer, would do business without profit, and unless he cashed his bills and sold for cash or its equivalent, he would lose money.

"While the average cost of doing business in the retail implement trade is about 16 per cent., prices fixed with a view to giving the dealer a margin to cover the cost and a profit would not be sufficiently high for those dealers whose cost of doing business is above the average, due to the peculiar conditions in their field of trade. Hence, the more we consider the whole pricing question, the stronger becomes the conviction that the only man capable of fixing the retail price is the dealer."

A well-balanced full page newspaper advertisement by Creeper & Griffin, Ltd., Owen Sound, Ont.

Inspection of Arsenate of Lead

Results Obtained by Analysis of 82 Samples

THE Inland Revenue Department has just issued a report upon 82 samples purchased as arsenate of lead in June, July and August of last year. The inspectors made purchases in the districts of Nova Scotia; New Brunswick, Quebec, Three Rivers, Montreal, Eastern Townships, Vallevfield, Ottawa, Kingston, Toronto, Hamilton, Vancouver, Windsor, Rocky Mountains, Victoria. The names of manufacturers included Canadian and American firms.

Results are judged in accordance with the following standards which were recommended and are incorporated into the fourth schedule to the Adulteration Act, by an amendment dated June 6, 1913.

STANDARDS.

Arsenate of Lead.

1. An insecticide, containing at least 48 per cent. of its weight of solids as a residue when dried to constant weight on the steam bath; and these solids must essentially consist of the pentoxide of arsenic in combination with the monoxide of lead. Water-soluble arsenic (expressed as the tri-oxide of arsenic) must not be present to more than one per cent. of the weight of the insecticide as sold.

2. Arsenate of lead shall be regarded as adulterated if any substance has been mixed or packed with it so as to reduce, lower or injuriously affect its quality or strength.

Results of Inspection.

The results obtained by analysis of the 82 samples now reported must be judged in accordance with the legal standards quoted.

The great majority of these samples are sold in the form of a paste, this being the form in which the article is most readily available for use as a spray. In order that the article may not dry out on the shelves of the dealer, it is usually put up in glass or tin containers, and hermetically sealed. Forty-one (41) samples of this collection were furnished to the analyst in the original container, and these are specified in the table. The remainder were furnished in glass bottles or in tins which had been filled by our inspectors from the larger packages of the dealer. Owing to the great difficulty of sampling a paste of this kind, some uncertainty attaches to the determination of the water content in these cases; and where the containers used by our inspectors have been imperfectly closed, more or less loss of moisture occurs during storage in the interval between collection and analysis. Indeed many of the samples, as packed by the manufacturer, showed clearly that loss of water had occurred through imperfect sealing. Some of these, put up in tin containers, showed the tin rusted quite through, and the contents dry. In spite of these imperfections, a sufficient number of samples, (more than 30) were received in such good condition as to justify the conclusion that, so far as contents of solid matter is concerned, the manufacturers of arsenate of lead endeavor to meet the requirements of the legal definition.

Water soluble arsenic varies considerably, but in no case does it reach anything like the permitted limit.

With regard to the content of arsenate of lead in arsenic acid and oxide of lead, which are the active ingredients of this insecticide, the following work reported by the New Jersey Experiment Station (Bulletin No. 222) is important. "Arsenate of Lead is prepared by the action of lead acetate or lead nitrate on di-sodium arsenate. Using pure chemicals the product prepared from the acetate contains theoretically 74.40 per cent. of oxide of lead and 25.60 per cent. of arsenic anhydride. At a conference of manufacturers and entomologists a standard agreed upon was that lead arsenate should contain not over 50 per cent. water, and not less than 12.5 per cent. arsenic anhydride. Fifteen samples of the commercial article gave the following results, calculated to a dry basis:—

Arsenic anhydride.....17.94 to 33.30%
Lead oxide .....62.48 to 70.63%

The great difference noted between theoretical composition and the composition of the manufactured article is due to the formation of basic salts whose amount and character vary with the method of manufacture, the mixtures of salts at different stages of the process determining (along with temperature and other conditions) the establishing of equilibria, which change with every change in the conditioning. It will be noted that the Canadian article, shows a greater uniformity and a nearer approximation to theoretic requirements than the samples analyzed at the New Jersey station.

Full information regarding the legal provisions governing the sale of arsenate of lead and other poisons usually sold by hardwaremen appeared on page 53, May 16 issue of Hardware and Metal.

CASH VS. CREDIT IN A COUNTRY TOWN.

(Continued from page 39.)

or less afraid of other merchants, particularly those who happen to be in the same line in the same town, learning too much about our business. Personally, I believe that nothing is more beneficial than the broadest kind of an exchange of information on business subjects; but for those who prefer otherwise, there is no necessity for them to disclose any important facts regarding their own business. The association may quite properly exist for the sole purpose of digging up credit facts pertaining to the customer and leave the facts of the merchant's business severely alone if he does not care to give out any information on that subject.

We cannot lose if we work together in this manner and we will eventually reach the desired end; viz., the inauguration of the cash system. Once this is done, I feel that all customers should be treated alike and that the wealthy man of irreproachable business habits should be required to pay cash just as well as his less fortunate brother. The man who has the money and is always willing to pay his bills never objects to a request for cash payment, and it will help soften the blow to the poor man and help to save his face if he knows that absolutely everyone is being treated in the same manner. By making this an ironclad rule, we can avert any possible danger of a return to a credit system. If we let the fence down in one place, it will soon be down all along the line. The only possible exception that I would make to this rule would be in the case of some man who had been very unfortunate in some manner over which he had no control, such as sickness, etc.

I am quite sure that the jobbers and their travelers would be only too pleased to assist in the dissemination of a cash doctrine and would help us in every way.

Speaking of jobbers, I think that they could confer a great benefit on us and cultivate goodwill for themselves if they would make a practice of quoting goods to us at a flat rate f.o.b. on the cars instead of giving us warehouse price that is commonly called an f.o.b. one. It is more or less of a nuisance to compile a cost book when every little order has to have small cartage costs, etc., added to it. The jobber knows beforehand just what the total cost will be to the merchants and might just as well have his price include these little extras.

These local credit associations that I have in mind can assist materially in taking care of such matters as the above, as their requests will meet with more attention than that of a single individual.

I should like very much to hear of and from those men who have instituted a cash business in their respective towns.

Fable of the Gink Who Wanted a Raise

BY FRANCIS GROVER HARRISON.

ONCE there was a clerk who wanted a Raise.

Not that the Species is Rare, but it has Unlimited possibilities.

Very Often, Late at Night, when he came home all tired out from Playing Billiards he could not sleep for thinking of how to get a Bigger Pay Envelope.

Somewhere he had read that to him that waits, all Things come.—

But if this Raise was on Its Way, it must have been Lost in Transit, for not even a Bill of Lading showed up.

So one Bright Day, he threw over the Crank, set the Motor working and got his Courage up to the point of asking for it.

Full of Bright Shining Hope he entered the Firm's Office. With Hope congealed into a Solid Mass of Ice he made his Exit.

To be Brutally Frank, there was Nothing Doing.

Of course, the Firm was unappreciative. They always are. But he would give them Something to be unappreciative of.

From that Date, there would be no more working his Head off, even though in its present condition that would have been an Easy Accomplishment.

So he sulked behind the Counter and did only what he was paid for. In fact he not only scraped the top of the Measure even, he shaved off a Bit More.

And then one morning as he listened to the Alarm Clock ringing for the Third Time, he had another Brilliant Idea.

The Way to get that Raise was to get in "Solid," he would do the Tammany Stunt and play a little Politics.

So he began making Friends with those who were Next. Private Secretaries to the Big Bosses were his Particular Meat.

Day after day he lunched with them, and blithely paid the Bills for the Games of Pool he tossed their Way.

Not only was This the Life; it was the Highroad to Success.

But strange to say somebody had strewn Broken Glass along the Highroad, and his Hot-Air Tires blew up with a Dull Moaning Thud.

Not only did the Private Secretaries fail to see any Connection between Playing Pool and using their Influence in his Favor; Influence itself was mostly not.

So one day he casually strolled into the Firm's Office and tried Method Number Three. He incidentally mentioned a Certain Mysterious Offer from a Firm out West at a Bigger Salary.

But of course, he would rather stay, provided the Salary matter was fixed up.

It was the Old, Old Gag, only he didn't know that Big Business had quit being held up in this Way about the time Dewey captured Manila.

And when they called his Bluff, he simply had to string along for want of a better Job to go to.

But he had still another Card up his sleeve.

He took to himself a Wife.

Ah, that was the Panacea. They could not fail to Come Across when they considered the High-Cost of Married Life and the Pitiful Pittance he was getting.

Unfortunately, they were as Blind to Cupid as they were to Real Ability, and the Raise still refused to be Shooed from its Hiding Place.

So he and Wifie had to Jog along on the same old Salary.

Now, if Johnny had put all the Energy into his work, that he did into thinking up Schemes, he would have had the Raise long, long before.

But it happened that Necessity was not only the Mother of Invention, she was the Step-Mother to Advancement.

So Johnny began to try the Only Course left open, Hard Work.

Of course you've guessed the Moral. He did a little More than he was paid for and Got Away with it.

Wrong Again! He began doing just what he was paid for Doing. But he did it so Darned Well that the Firm began to take notice.

And in a couple of Years Johnny and Mrs. Johnny moved into a Better Flat where John could get to Work Earlier, for it just did seem that the Days weren't long enough.

MORAL: Most Minds can think of but One Thing at a Time. Those that are filled with Self-Pity haven't much Room left for Concentrated Endeavor.

Bends and Offsets for Rectangular Pipe

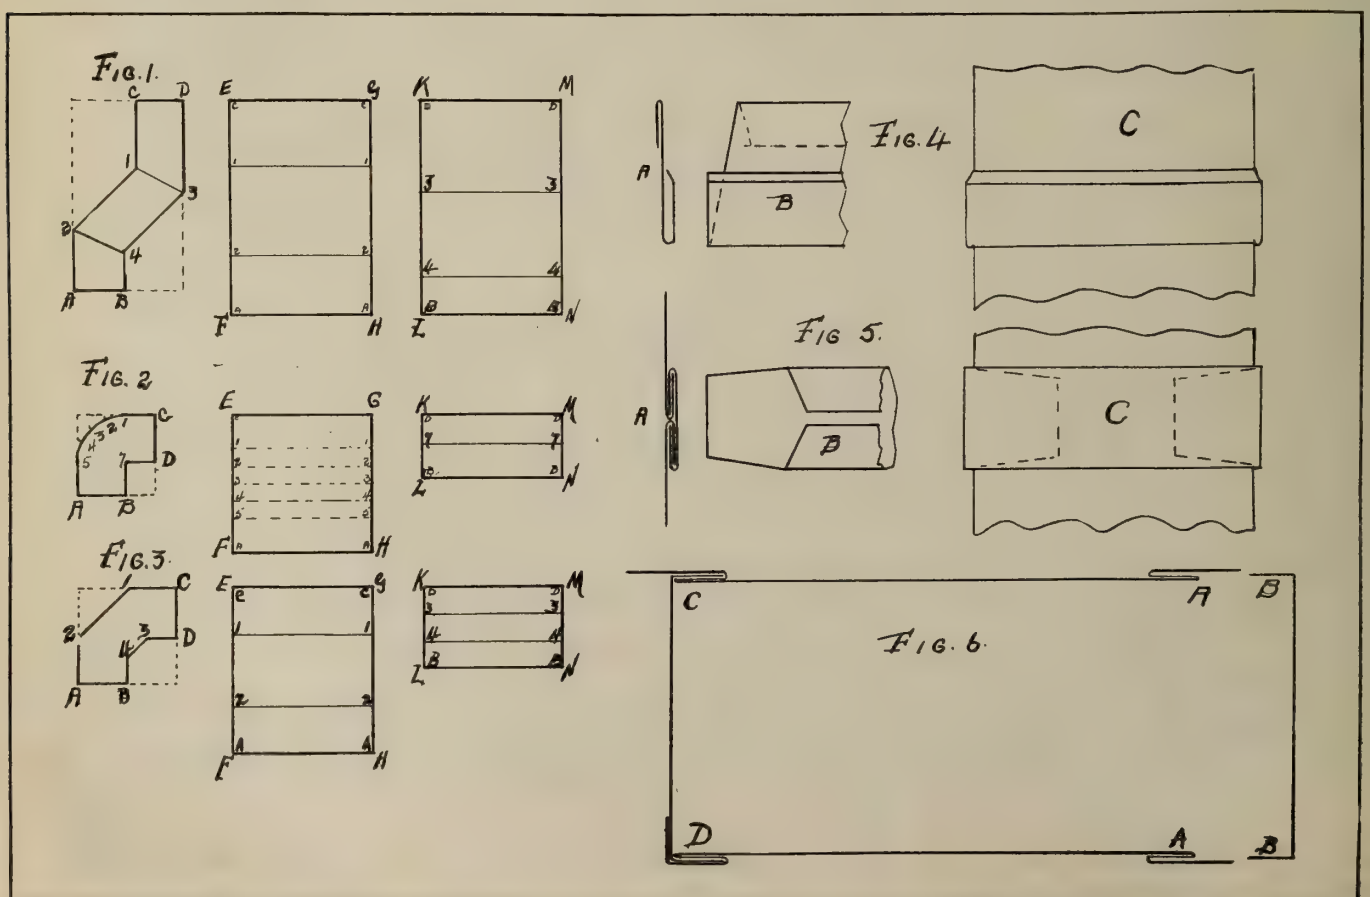
Sheet Metal Problem Showing How to Make Bends and Offsets for Rectangular Pipe, Also the Regular End Joints.

Written for Hardware and Metal by E. Bronson.

THE problems which we will consider here are bends and offsets in connection with square or rectangular pipe, and also a couple of the regular end joints for same. In laying out an offset, the same or similar to the one shown in Fig. 1, the angle and height are, of course, to be governed by the conditions which are to be overcome in the course of putting up of pipe. Care should be taken to see that the center piece of pipe is of the correct width, and not narrowed down. In Fig. 2 we show an elbow for square pipe. This elbow, as shown, is square in the throat, while the back has been rounded off to a quarter circle in profile.

In Fig. 3 we show an elbow somewhat similar, but with both throat and back cut off on an angle, making it appear like a three-pieced elbow.

To mark out pattern for the offset in Fig. 1, it is first necessary to draw an elevation of the end or side of pipe with offset and height required.



In Fig. 1 let A-B-C-D be the elevation of the one required. While this shows the end or narrow way of the pipe, the method is the same if the offset be on the width of the pipe.

Draw a line as E-F, from E-F draw G-H a distance away equal to the width of the pipe required. Draw a line square with E-F at, say, E-G. From E and G mark off a space equal to C-1 on elevation from point 1. This obtained, mark off a space equal to 1-2 on elevation; from 2 mark off a space equal to 2-A on elevation. Connect points A-A, completing pattern of side on line A-2-1-C. To obtain pattern of opposite side, draw two lines, as K-L and M-N, a distance apart equal to width of pipe required; draw a line square with K-L to, say, at K-M.; from K and M mark off a space equal to D-3 on elevation; from point 3 mark off a space equal to 3 to 4 on elevation; from 4 mark off a space equal to 4-B on elevation. Connect B-B, making pattern on line B-4-3-D of elevation complete. That the elevation is the pattern of the ends is, of course, understood.

In Fig. 2 divide the circular back of elbow into a number of equal parts, as shown by 1-2-3-4-5.

Draw two lines, as E-F and G-H, a distance apart equal to the width of the required pipe. Square from E-F, draw a line at, say, E-G from E and G; mark off a space equal to C-1 on the elevation. From this point 1 mark off the four spaces on rounded part of elbow, as shown by 2-3-4-5; from 5 mark off a distance equal to 5-A on the elevation. Connect points A-A, completing pattern of wide side on line B-C of elevation. Draw two lines, as K-L and M-N, a distance apart equal to width required; square from K-L; draw a line as, say, K-M; from K and M mark off a space equal to D-7 on elevation; from 7 mark off a distance equal to 7-B on elevation. Connect points B-B, completing pattern of wide side of pipe on line B-7-D of elevation.

The method of drawing pattern of elbow, shown in Fig. 3, is the same as described in Fig. 1. In each case the elevation is pattern of end, and the numbers and letters on drawings are the

same, so that the problem can be followed out.

In Fig. 4 is shown the cleat joint, which is usually used on square pipe.

At A is shown a section through the cleat. At B a part elevation of cleat shown the end cut to allow pipes to enter one another, and at C a section of pipe with a cleat joint.

In Fig. 5 is shown what might be called a locked jointed cleat. At A is shown a part section of one side of two pipes, with edges or folds turned back on the pipe, and the cleat in place over and locked into them. At B is shown a part elevation of a locked cleat with lays on end. At C is shown a section of pipe locked jointed with this cleat, dotted lines showing the lays under the ends of cleats.

In Fig. 6 is shown a joint used either on the corners of square pipes or elbows and angles, etc. At A is shown the double fold. At B the single fold or edge which fits into the double fold. At C is shown the single edge entered into the double fold, and at D the joint complete.

This style of lock is handy for large square pipe and for the elbows. In using this joint for elbows or offsets, the single edge at B is put on ends, as shown by A-B-C and D in elevations at Figs. 1, 2 and 3, and the double fold on the straight sections of the patterns.

AN UNAPPRECIATIVE HOUSE.

A hardwareman tells of an incident that throws an interesting side-light on the credit question. A clerk came to him in the office to inquire if they had a charge account for a Mr. Laidlaw. Upon investigation, no such account was found on the books. It then developed that the customer had given that name and had stated that he was an old customer, but unfortunately had forgotten to put any money in his pocket before leaving home, so that now, with the carbureter in his car gone wrong, he was helpless to replace it unless credit should be extended him.

The office man then went out in front to meet Mr. Laidlaw, who in the course of a few minutes established the fact that he had been a more or less irregular customer for years, and that he had always paid cash. Here, but for a lucky accident, the clerk would have refused a first-class customer a small credit charge simply because the store had never attempted to tabulate the names and addresses of their transient cash trade. If he had had an account standing on the books for a year, there could have been no question raised. That single item when brought to the attention of the head of that business resulted in a complete change of policy in this important respect.

HARDWARE LETTER BOX

Standard Plumbing Supples.

C. W. Clarke, Brechin, Ont.: "Will you kindly favor me with the address of firm making Standard Plumbing Supplies?

There are two firms manufacturing Standard goods. The Standard Sanitary Mfg. Co., Toronto; The Standard Ideal Co., Port Hope, Ont.—Editor.

Natural Gas Goods.

W. F. Sharp, Empress, Alta.: "Kindly give me address of firm making natural gas goods."

T. F. Bermingham, Hamilton, Ont.—Editor.

H. R. Ives Co.

J. K. Kennedy, Port Elgin, Ont.: "Kindly let me know where the firm of H. R. Ives is located now; also if I can get some stove patterns from them?"

This firm is now known as the Ives Modern Bedstead Co., Montreal, but they do not manufacture stoves, this branch of the business having been discontinued at the time of the reorganization of the firm. Steel & Radiation, Ltd., Toronto, we understand, have all their patterns.—Editor.

Little Fellows and Big

THE failure is an economic necessity—for it is the failures of the world who make possible its success. The men who are satisfied with their little ruts—who are content to let well enough alone are the men who contribute to the world's advancement by getting out of the way of the men with initiative—ideas—courage—imagination.

The draftsman—the student—the clerk who rises to a position of power—is not always endowed with a phenomenal intellect. He is usually an ordinary chap with enough ambition to carry him ahead. It is the indifference of the rut-runners and stand-patters whose lack of energy and desire throws open the doors to the big things for the man with the stamina to go after them.

The business man who remains small is the fellow who does not deserve to grow big. He has had every chance the big fellow has had. The manner of growth—the activities of the big enterprises are open books that he might profitably read. There are examples all around him—the big fellow's opportunities were no greater than his own—nor was he blessed with supernatural power.

The big fellows are big by consent of the small man who has all the while been sitting tight and cursing the insolence of the man who was stronger than himself, forgetting that the big man had only taken advantage of the forces that he could have utilized himself. Success plays no favorites. Her hands are clean of partiality and prejudice. She gives to him who dares to take. She raises the brave—crushes the weak.

Then why do some businesses stay small while their competitors are reaching out for bigger things?

I'll tell you—

Most men have more ambition than enterprise—more hope than hustle—more wish than work. They are looking for the big—heroic—ponderous thing to do. They ignore the simple little details that collectively make for greatness. They forget that the institutions that have buried their roots so deep in our social fabric did not spring into greatness over night. They forget that these institutions are the finished mass of an infinite amount of little things—many of which might seem trivial and unimportant.

Growth begins when the mind seeks a wider field. Bigness is not a mechanical process. It is a state of mind. It is will. The man who has reached a position of power in his particular field worked toward that position constantly. His ultimate goal existed in his mind long before it existed in fact and every move—every change in his plans were made with that goal definitely fixed in his mind.

To grow big—think big. And get busy before the other fellow acts big.—From "Things Technical" of Technical Supply Company, Scranton, Pa.

Junior Clerk's Page

THE SOLILOQUY OF A SHIRKER.*

By W. Livingston Larned.

I AM a "Shirker." I am to be found in almost every large business institution, just so long as there is human nature, ingratitude and flesh-and-bone frailty.

When I rise each morning, a dislike for what is to come that day possesses and aborts me. I curse the alarm clock and cast maledictions upon the head of Toil. In my laziness I revile the man of industry and sneer at ambition. Modern Business bores me. I work because I must work, not through love of it. With unwilling feet and bowed head, I slowly open my door and face the dawn. It is a rough road, dark, uninviting and leading me further into my own unworthiness.

For me there is none of the joy of Labor. The man at the desk next to me sings at his tasks. When he comes home to his wife at dusk, he is still singing. The echo of the whirling looms is in his heart. He finishes one task for the sheer eagerness of tackling another. I belittle him in my thoughts and slyly glance at him over my shoulder. The scheme of Life is all wrong. Why should he be so happy? Why should labor make him thus? Bah! He is a groveller in steel filings and ledger dust. Who cares for his trite paeons of industry? His code is snarled up in big interests. He is working for somebody else. He is a patriot of piffle.

Gives the Best to Himself.

If it were my business—Ah—that would be quite different. I have built myself a feeble, tottering ground-plan of selfishness. My "Boss" is my "Boss" only. Because he is my "Boss," must I give him the best there is in me? Not at all. I will save that for myself.

And I count the hours I give him as a miser counts his gold. Each precious, guarded minute trickles and sifts through my mental fingers. The very minutes clink on my desk before me. "One—two—three"—I count them as they pass. In another hour I shall be my own boss. And this is a bargain I have with my boss. It is an understanding between men. He is to give me just so much for just so many hours.

At the sound of the whistle our bargain has ceased for another day. I push the memory of him and my work hastily to one side. If I have done well this day, I have done well only for him. My salary is no greater than it was. I have had no honeyed words. There they stand, in mute, impassive mischevious rows—the ledgers and the time-books and the solemn-visaged copy of Bradstreets. They are milestones that have marked the weary course of my year's travel.

Others' Success an Irritant.

If this business is a success I am jealous. Perhaps, unconsciously, some vagrant spark of life in me illuminates what others have done to make it so. That my fellows have put their shoulders willingly to the wheel is an irritant. I might have done so, too. And if this business is a failure, I scurry from it, afraid, dragging my poor and shabby ideals after me. There is no sympathy, save my sympathy for myself.

I am sitting, now, this very moment, drumming the desk with my pen. Summer is in the air. The windows are wide and I can faintly distinguish the soft, muffled hum of the hot streets below. I want to be—somewhere—anywhere but here—where I am.

Things look stupid and sorry and drab to me. My nearest neighbor is bending over his desk, intent on his work. I wonder why he does it and how he finds his interest.

Work is made of poor skeins indeed. Its texture weaves no beautiful dreams. Someone has mentioned "The Sentiment of Toil." Rot! As I sum it up, it is only dollars and centiment. And it seems to me that six o'clock would never come.

All day long I shrewdly deceive myself. I have as many tasks as others, but each, in turn, I dwarf of its importance. My to-morrows teem with great deeds to be done; my to-days are congested with little nothings that I shall put off. I prefer to do what I am to do, when I am in the mood. And, somehow, that mood is never quite of the present. The sparkling white insigna of inspiration stays upon a perpetual horizon.

The One Who Is Fooled.

But I am fooling not alone my "Boss," I am fooling myself, too. Strange how easily I fall into this smooth, affable habit of making it easy for myself. We talk it over, myself and I. "You are doing quite enough; they'll never know," I say to myself, and, if my conscience pricks me and if, momentarily, a quick, sharp sense of impending disaster comes, I laugh, and smoke a cigarette in the hall and "forget it."

Oh, yes, I know those pretty conceits. My greater task is not the task laid down for me by set rule . . . it is the self-imposed "job." The doing of the "unexpected things" that were not obvious. My worth to my firm is my watchful waiting for opportunity. A still voice incessantly harps on that stupid theme . . . "It's easy to get men to do the obvious things. There are millions of men to work. . . We want the "thinker."

That's it—work—work—work. I'm sick of the mere mention of the word. And yet I occasionally catch the drift of my better self's murmured injunction. One more pat phrase to that last letter might have landed a new customer; one more sentence to the calling client might have increased an order, one more minute of earnest thought, might have evolved an economic method of procedure. I always stop just before I cross the line. It's lunch time or quitting time when I toe the line. I block my own path "after working hours." I stubbornly put on the brakes, because it's "too much trouble" to do more than is expected of me.

(Continued on page 53.)

Current Hardware News

Opening New Store.

Okotoks, Alta.—Ritchie & Allen are moving into their new store and will soon be ready for business.

Business Changes.

Galt, Ont. — R. Witherspoon has bought the hardware business of Hammil & Moore, who will continue in their implement business.

New Firms.

Walkerville, Ont.—Nelson Bros. have opened a new hardware store.

Lachine, P.Q.—The Metal Products Company, Limited, has registered here.

Montreal, P.Q.—Harry Hill has registered the Hill Motor and Machine Co. for auto repairs, etc.

New Company.

The Canadian David E. Kennedy, Ltd., has been organized for general building purposes and to carry on all branches of a contractor's business, as merchant, engineer, etc. The capital stock is $10,000, and the head office will be in Montreal.

Fire Losses.

Saskatoon, Sask. — The Saskatoon Wire Fence Works suffered two hundred and fifty dollars damage as the result of a small fire.

St. John's, Nfld.—In the early morning of June 17, fire destroyed the contents and did much damage to the building the Martin Hardware Company, Water Street East. The loss is estimated at $80,000, out of which $56,000 is covered by insurance, so that the firm stands to lose considerably. The Martin Hardwase Co. is an old and well-known firm. Despite the handicap caused by the fire, the company has taken over temporary premises a few doors east, and will continue doing business there until the work of restoring their former store has been completed.

Industrial.

Toronto, Ont.—The British American Hardware Manufacturing Co., of 298 East Queen Street, have taken out building permits for the construction of five attached brick stores and dwellings at a cost of fifteen thousand dollars.

Galt, Ont.—The Galt Wire and Ornamental Company has completed the construction of its plant and is now busy turning out orders. The new concern has for officers John Spaulding, junior, president and general manager, formerly of the Otis Fensom Elevator Company, and R. J. Spaulding, formerly of the Goldie-McCulloch and later of the Sherwin Williams traveling staff.

Regina, Sask.—The city of Regina has sold its warehouse to the Canadian International Light Co. for $22,000. The company will proceed to erect a factory here for the manufacture of kerosene and gasoline lamps and smoothing irons.

Ontario Incorporations.

The Interstate Electric Novelty Co., organized to manufacture and deal in all kinds of electrical novelties, appliances, machinery, etc. Capital, $40,000. Head office, Toronto.

The Galt Wire and Ornamental Wire Co., Ltd., organized to manufacture, buy, sell, and trade in architectural iron, wire and brass goods, etc. Capital, $40,000. Head office at Galt, Ont.

The Excelsior Electric Manufacturing Company, Ltd., organized to manufacture, buy, sell and deal in electric motors and electrical machinery of all kinds, and to take over by purchase as a going concern the Excelsior Electric Manufacturing Company. Capital to be $40,000, head office Toronto.

The Canadian Novelty and Supply Co., Ltd., organized to manufacture, buy, sell and deal in mouldings, etc., and in electric light fixtures, school supplies, ornaments and novelties for decorative purposes. Capital to be $60,000, head office Waterloo, Ont.

Personal.

Vancouver, B.C.—Mr. McLennon, Vancouver sales manager of The Steel Co. of Canada, is in Toronto.

Parry Sound, Ont.—Thos. Kerr, of the Aikenhead Hardware Co., of Toronto, is spending his vacation here with his parents.

Z. E. Martin, of the firm of Martin-Senour & Co., Montreal and Chicago, was in Montreal this week in consultation with W. H. Gerke, the Canadian manager. Mr. Martin, who is leaving for a trip to the Old Country, was introduced on the exchange of the Montreal Board of Trade by William H. Evans.

Toronto, Ont.—James F. Paton, manager of the paint firm of that name, celebrated his forty-first birthday on June 24.

F. S. Amidon, of the Trimont Manufacturing Co., Rocksbury, Mass.; Mr. Worcester, of the Worcester Wire Novelty Co., Canton, O.; L. J. Brim, of D. P. Harris Hardware Co., New York; and H. A. Allan, of Stevens-Hepner Co., Ltd., Port Elgin, were calling on the trade in Montreal this week.

A. E. Brooks, formerly with Wm. Stairs Son & Morrow, of Halifax, N.S., has joined the traveling staff of Frothingham & Workman, Montreal, and will represent them in the three Maritime provinces, taking the place of W. H. Crocker, who has left them to open a manufacturers' agency.

Friends of J. H. Aldstaetter, representative of the American Metal Polish Co., West Somerville, Mass., will regret to hear that he met with a serious accident in Montreal last week, and is now in the Western Hospital, Westmount, Que. Mr. Aldstaetter, it is stated, was standing on the rear platform of a street car and was thrown from the car as it rounded a sharp curve. He struck his head on the pavement and was rendered unconscious. He was hurried to the hospital, where his condition was regarded as very serious for several days, but it is now thought he has a good chance of recovery.

Western Notes.

St. James, Man.—The Cairns Heating & Building Co. has opened up for business.

Godfrey Darling, advertising manager of the G. F. Stephens Co., Winnipeg, attended the ad convention at Toronto this week.

Ramsey's, Ltd., department store, Edmonton, Alta., intend shortly to erect a new building in which there will be two new departments—jewelry and sporting goods.

Regina, Sask.—C. E. Chandler, of the Calgary branch of the Canadian Metal & Steel Range Company, of Oshawa, Ont., will be manager of the new Regina branch.

C. Moulding, Elgin, has sold his hardware business.

W. E. Warner has opened up in South Edmonton.

Elgin, Man.—C. Molding has disposed of his hardware business.

F. X. Brunell, who was burned out at Le Fleche, Sask., is re-opening.

Edmonton, Alta.—J. A. Warner has sold out to the Alberta Hdw. Co.

The Cairns Heating and Building Co. have started business at St. James, Man.

The Saskatoon Hardware Co., Saskatoon, have added a hotel equipment department.

W. A. Kemp, of the Kemp Mfg. Co., Toronto, was a recent visitor at Winnipeg.

Moore Park, Man.—J. Rutley has disposed of his hardware business to G. H. Leslie.

South Edmonton, Alta.—A new hardware store has been opened by W. E. Werner.

Star City, Sask.—It is reported that B A. Doucette has sold out his hardware store.

Ryley.—M. Richards has retired from the hardware firm of Richards, McNaughton & Co.

Moore Park, Man.—G. H. Leslie has succeeded Josiah Rutley in the latter's hardware store.

Clyde, Alta.—K. Olson is taking on a line of hardware and furniture in addition to his lumber business.

R. Frank Bevers, of the Bevers Bros. Hardware Co., Calgary, has gone to Hamilton, Ont., for a trip.

The McLaughlin Jobbing Hardware Co. have succeeded Grieve and McLaughlin at Tofield, Alta.

Toronto, Ont.—J. O. Darns, of the local staff of the McClary Mfg. Co., has returned to his duties from his vacation.

Bert Scott, one of the owners of the Northern Hardware Co., Edmonton, has gone to Waukesha, Wis., on a two months' trip.

J. L. Welshon, traveler in Western Canada for the Reading Hardware Co., has returned East after a trip of several months.

N. A. McGrattan, who was formerly in business at Kandahar, Sask., has moved to Winnipeg, where he has been appointed traveler for the Miller-Morse Hardware Co.

H. B. Byers, manager the Winnipeg retail store of the Ashdown Hardware Co., who has been ill for several months, has gone away to rest during the summer.

Regina, Sask.—The Premier Glass Co., Ltd., which is capitalized at three million dollars, will erect four plants in Canada besides that one at their present headquarters at St. Pierre aux Liens, Que. The first construction work will occur in Regina and later at Selkirk, Dunville and Calgary.

G. H. Sweet, who was recently appointed manager of the Miller-Morse Hardware Co.'s cutlery department, has resigned. His successor is A. Good.

Toronto, Ont.—Mr. Paget, of the Paget & Hay firm of hardware dealers of Agincourt, Ont., has been in the city on one of his weekly trips.

M. P. Barnes, North Manitoba, traveler for the Miller-Morse Hardware Co., has gone East to his home at Perth for a vacation.

Toronto, Ont.—Elton Emmett has taken the place of E. V. Jeffreys, of McClary's traveling staff pending the latter's recovery from a broken arm.

The Moore Head Hardware Co., Ltd., have been incorporated in Manitoba to conduct a hardware business at Moore Head, with capital stock of $5,000. H. Leslie and J. Rutley are interested.

C. S. Packard, sales manager of the Reading Hardware Co., Reading, Pa., passed through Winnipeg last week on his way West. On his return he will visit the East.

During a fire at Carbon, Alta., on Friday, June 19, a large amount of ammunition exploded in the Burnett's hardware store, the volley being heard for miles around. Six of the biggest business blocks were destroyed, and about $50,000 worth of damage done. Carbon is 60 miles north-east of Calgary.

British Columbia Items.

George Moore, of McLennan, McFeely & Co., has gone to Alberta to take up farming.

The B. C. Hardware Company, Victoria, has opened a branch in Victoria West.

Thos Hughes, Kitsilano, has moved into a new store, close to his former stand on Fourth Avenue, Vancouver.

L. C. Masson has opened a new general store at West Revelstoke, carrying hardware.

J. A. Parker has purchased the hardware stock of Thomas Fox, South Vancouver, and will carry on the business.

John McGlashan's hardware business, corner Tenth avenue and Trimble street, Vancouver, has been bought by Elmer Strong & Co.

Scott Williams, formerly with J. A. Flett, Ltd., Vancouver, is now in charge of the sporting goods department of the Drake Hardware Company, Victoria.

The Duncan Trading Company, which bought out Murchie & Duncan, at Duncan, Vancouver Island, will carry a full line of hardware. Duncan is one of the most prosperous districts of the province.

Alex. Smith, who has been assistant in the sales manager's department at McLennan, McFeely & Co.'s, has succeeded H. J. W. Brooks, as northern representative for the firm, with headquarters at Prince Rupert.

Bob Knight, of the road staff of McLennan, McFeely & Co., is an ardent lacrosse enthusiast, and figured in both games against the Calgary Chinooks.

The Simpson Hardware Company has opened a branch at Collingwood, five miles out toward New Westminster from Vancouver on the interurban line. Mr. Protheroe is in charge.

The interests of Mr. Hauser, of Hauser & Paine, Alberni, have been acquired by Mr. Paine, who will hereafter carry on the business. He has had extensive experience in the hardware business, having been with Schwabacker Hardware Company, Seattle, for many years.

A. E. Ducklow and T. E. Harrison have acquired the business of C. B. Fearney at Collingwood East. Mr. Harrison is an old resident of South Vancouver, while Mr. Ducklow comes from Grenfell, Sask., where he was manager of the hardware and furniture store of E. A. Walker & Sons.

Baseball is occupying the attention of several of the hardware men in Vancouver, the two big wholesale houses having teams in the Wholesale League. The Mc & Mc team have won their four games, one being with the gladiators from Wood, Vallance & Leggat's. The Mc. & Mc's also visited Powell river, where they took revenge for a defeat administered last year.

Hardware men who carry a line of sporting goods are interested in the gun club movement in the province, several clubs being formed with large memberships. Among the most recent are Sidney, Ganges Harbor, Hammond, Haney and Point Grey. Incidentally it might be mentioned that Bob Crawford, one of the well-known hardware men of New Westminster, is quite a crack shot. Out of 25 clay pigeons the other day he brought down three; but then, as Bob remarked, "Just look what fun it gave the boys."

Motor delivery equipment is becoming a feature with dealers in Vancouver and New Westminster, particularly. Perhaps one reason for this is the excellent streets, permanent pavement being very extensive, with Kingsway paved from Vancouver to New Westminster, and Granville street from Burrard Inlet to the Fraser River. The most important reason, though, is that business demands it. The latest to add a motor delivery are the Manitoba Hardware Co., Grandview, and the Kitsilano Hardware Company, Fourth Avenue, Vancouver. The Shore Hardware Co., Victoria, have also given the same evidence of prosperity.

Weekly Market Reports

Statements From Buying Centres

THE MARKETS AT A GLANCE.

Business in general has not shown much change during the week. The warm weather of the past few days has stimulated the demand for certain lines of summer goods, in several other lines there has been a noticeable falling off. The metal markets are still weak and buying is of a hand-to-mouth character. Retailers and wholesalers alike appear to be quite optimistic, but orders are lacking. Retailers are only buying goods in small quantities and as needed. Many wholesalers consider this a good policy and are not urging the retail trade to buy heavily. Very few price changes have taken place during the week.

MONTREAL.

MONTREAL, June 25. — With warmer weather repeat orders are being received for many lines of summer goods, and the volume of business generally is regarded as satisfactory. Trade from the farming districts is showing a steady improvement, and there has been quite a demand for haying tools and farm implements generally. Collections are reported fairly good, and the outlook is promising.

Woodenware.

There has been a general advance in the price of woodenware. Such lines as tubs, pails, etc., have advanced 5 per cent., and common clothes pins are marked up to 90 cents per box. They are reported very scarce at that price.

Fruit Time Supplies.

As the fruit season advances there is quite a marked demand for such lines as apple parers, cherry seeders and fruit presses, etc., also preserving kettles and similar lines.

Summer Goods.

Repeat orders for hose and lawn supplies have been heavy owing to the continued warm, dry weather. There has been quite a revival of the sale of hot weather lines, such as screen doors and windows, refrigerators, ice cream freezers, hammocks, etc.

Wire and Wire Goods.

The factories are finding it difficult to keep up with the orders for wire fencing this season. The sales have been exceptionally heavy all along, and there does not appear to be any immediate prospect of a let-up. Hay wire is selling well, and prices are unchanged from the list in current market report.

Nails and Screws.

There is a fair demand for nails at the prices quoted: $2.25 base, Montreal, for wire nails, and $2.50 base, Montreal, for cut nails. Screws are unchanged, as are also rivets and burrs.

Metals.

The metal markets are still weak, and there is practically no change from last report. Quotations are as follows: Tin, 37½c; sheet zinc, $6.75 in casks and $7 in small lots; lead, $5.10; antimony, $8.50; spelter, $6, and copper, $16. Ingot brass, red, is 14c lb.; ingot brass, yellow, 13c lb.; tinkers' bar solder is 28c; wire solder, 25½c; half-and-half, 24½c, and wiping solder, 20 to 30c.

Bar Iron.

There is a quiet market still on bar iron, and the quotation of $2.05 base, Montreal, has not been altered.

Lead and Lead Waste Pipe.

The demand for lead and lead waste pipe is about the average, and prices are maintained at the figures quoted for some time past; namely, 7½ cents for lead pipe and 9 cents for lead waste pipe, with discounts of 7½ per cent.

Stoves and Ranges.

The demand has been fairly active, and an improvement is expected shortly. A lot of apartment houses are under construction at the present time, and it is the practice to equip these with gas stoves at the expense of the landlord. This means generally the sale of about six to a dozen or more stoves for each building, and is a business worth catering for. These building operations also provide quite an active demand for radiators and hot water furnaces. Business in all these lines has been quite good, and there have also been some good orders for oil stoves, especially for country houses. The outlook for fall is regarded as very promising.

Rope, Twine, etc.

Binder twine is selling well now, and there has been a good demand for cordage of all kinds. Prices are as follows: Pure Manila, 15c; British Manila, 11c; African hemp, 11c; sisal, 10½c; double lath yarn, 10¼c; single lath yarn, 9¾c. For binder twine the prices are: Best Manila, 650 feet to pound, 13½c; Manila, 600 ft., 11c; standard Manila, 550 ft., 9¾c; standard, 500 ft., 9¼c.

TORONTO.

Toronto, June 25.—Business in general shows a decrease from last week, a fact that is largely due to the season, coming as it does after the spring and before the fall orders. Cordage shows the most strength of any one line at present. The heavy rain of last Friday extending as it did from Kingston to Windsor, had a very good effect upon things in general, as the rain was needed in most districts to insure good crops this fall. The recent cool weather affected summer goods less than might have been expected.

Metals.

Metals are quiet and demand is slow. There have been no changes other than a drop in half and half solder, which is now 23c per lb. Tin holds its late advance to 33½c. Lead and copper are both firm at $5.15 and 15c respectively. Spelter is still $2.50. Buying is of a hand to mouth order. Other prices are as follows:—Antimony, 8¾c to 9c lb.; zinc, 5½c per lb.; ingot brass, red, 13c to 15c lb.; ingot brass, yellow, 12c to 14c lb.; half-and-half solder, 23c lb.; pattern aluminum, 22c to 24c; ingot aluminum, 18½c to 19½c lb.; acme solder, 19½c lb; easy wiping solder, 20½c lb.; star extra, 21¾c lb.; wire solder, 26c lb.; tinkers' bar solder, 27c lb.; lead wool, 8c lb.

Nails, Screws and Rivets.

Thees lines are quiet, nails particularly so as a result of heavy orders at the old price and the fact that a large part of the wood work in new buildings has been completed. Wire nails at 2.25

base and cut at 2.70 are still the ruling prices.

Manufacturers are merely marking time and like Micawber, are waiting for something to turn up in the nail market. In spite of their dissatisfaction there is no present talk of a change.

Screws are as per current market quotations. Rivets and burrs are still 35 and 12½ off.

Rope, Twine, Etc.

Cordage lines are looking up with the coming of the harvest season and other causes so that they are now the leaders in local hardware sales. Hay fork rope and binder twine are probably in best demand. Campers' tents are also going very well. The popular size of 10 x 12½ x 7 x 3 sells at $14, with 15 per cent. off., and other sizes in proportion. Pure manilla rope is still 15c base, British 11c, African hemp 11c, base, and Sisal 10½c base.

Stoves.

Stoves have shown a greater slackening than any single line in the past week. The arrival of summer and the late cool weather has lessened the demand for gas and oil stoves to a great extent. These lines are peculiarly susceptible to changes of temperature at any season. The big demand in stoves is now over until fall. More gas ranges have been sold here this spring than ever before.

Summer Goods

Summer goods have not suffered nearly as much as might have been expected as a result of the late cool weather. Apparently, people have bought on the assumption that the articles would be needed soon at any rate. Hay forks, scythes and other harvest goods are the leaders in these goods. Freezers and refrigerators have sold very well despite the weather and the latter in particular have sold very well this year. The weather bureau's prediction of good weather in the near future should materially assist all of these lines.

Cement, Fire Brick, Etc.

Demand is fair in these lines and prices are unchanged as per current market quotations. Cement is $1.85 for less than carload lots.

Iron, Pipe, Etc.

These lines are in fair demand but unchanged except for a 10c reduction in Queen's Head galvanized iron, which is now 4.25 base in case lots. Other current prices are as per current quotations.

LONDON.

LONDON, Ont. — The return of warm weather has stimulated business here considerably. During the col spell there was a noticeable decrease in sales especially with the retail men.

The jobbers have been shipping large quantities of binder twine and hay-fork tape during the past week.

Binder twine is quoted as follows:—

650 ft.	13½c per lb.
600 ft.	11c per lb.
550 ft.	9¾c per lb.
500 ft.	9¼c per lb.

Rope quotations remain unchanged and are:—

Pure manila	15c lb. base
British manila	11c lb. base
African hemp	11c lb. base
Sisal	10½c lb. base
Deep sea line	18½c lb. base
Cotton	25c lb. base

Turpentine has advanced again making present price:—

1 bbl.	70c per Imp. gal.
2 to 4 bbls.	69c per Imp. gal.
5-gal lots	77c per Imp. gal.

Linseed oil quotations remain the same as last week.

A good demand is noticeable for scythes and snaths, the latter are quoted as follows:—

No. 3 patent	$7.35 doz.
No. 2 patent	7.70 doz.
No. 1 patent	8.40 doz.
Brush	8.40 doz.

Builders' Supplies.

There is a very fair demand for glass at present. Single diamond in case lots is quoted at 20 per cent. and double diamond at 25 per cent. Single lights are quoted at 40 and 10 per cent. Wire nails are still quoted at $2.25 base. Cut nails remain at $2.70 base. Other lines of builders' materials are in fair demand.

WINNIPEG.

WINNIPEG, June 25.—Jobbers report sales so far this month equal to those of the corresponding month of former years, despite the fact that merchants continue to buy from hand to mouth, deferring placing their big orders until the crop is more fully assured. While news concerning the crop continues to be favorable, they vary somewhat, and it is known that there are still some areas waiting for rain.

The conservative policy in buying referred to above is one that appeals to the wholesalers as the wisest course. However, they are making every effort to have their customers specify for thresher needs next month, feeling that with the prospects so good, there will be a rush during July which will not admit of delay in buying.

Barb Wire Shortage.

A shortage of barb wire has been troubling merchants and jobbers in the West for some time, but this should be remedied within the next few days, as a large tonnage is now afloat somewhere between Cleveland and the head of the lakes. Orders are expected to be filled up within the next ten days.

Requests are still coming in for barbed wire, and business in this line this year has been ahead of what was anticipated. Woven fencing continues to move freely, and some poultry netting, although the season is nearly over.

No Change in Nails.

No change has yet taken place in the price of nails for the West, the price set by the manufacturers not being acceptable to the jobbers, and will need some adjusting. The mail order houses are selling nails so cheap, it is difficult for jobbers to raise the price in fairness to customers, though the manufacturers have already raised their price. The question will naturally be asked by the merchants, "Where do the mail-order houses buy their nails?" Winnipeg jobbers profess they do not know where nails can be bought so cheap as to enable them to compete so successfully with the merchant. It is believed that jobbers will hold down the price until this difficulty is overcome, and it will not be long. The demand for nails is only fair.

This severe mail-order competition has had the effect of changing the price of other goods carried by hardwaremen, including wrenches, bar iron, and crow bars. Complaints were made by retailers about the price at which mail-order houses were selling these lines.

Bale Ties Wanted.

Orders are coming in very nicely for thresher supplies, harvest tools, and binder whips. There will be a big demand for bale ties for the approaching harvest. It looks as though there will be a big hay crop, especially in Alberta, which always means a big demand for bale ties.

Solder Down Again.

Solder is down again, this time to 25 cents. This is the second drop inside of two weeks, and is due to weakness in the tin market. Ingot tin eased down ½-cent last week, and it is generally felt that this is the bottom. Sheet tin is said to be remaining fairly steady.

The representative of a local sheet metal house reports business better during the past week than it has been for six months, in all lines of sheet metals. Orders were keeping him pretty busy when Hardware and Metal's representative called, good-sized orders, too, from Winnipeg, and as far west as Calgary.

Canada Plates Selling.

Prices of sheet metals have been easy up to the present, but general indications are that a stiffening is due. Retailers' stocks are down, and it seems now as though they want to buy in a hurry. Owing to the opening up of the

fall trade, there is an exceptional demand for Canada plates.

Just now there is a good demand for grass scythes, quoted at $6 to $7.50, with only a fair demand for brush scythes in the West. Mounted grindstones with steel frame are moving freely, and quite a number with treadle attachment are selling. Mounted grindstones are quoted at $4.50 to the retailer. The old-fashioned stones, which used to be shipped to the West in car-load lots, are now sold in limited quantities.

Builders' Hardware.

J. L. Welshon, representing the Reading Hardware Co., Reading, Pa., has returned to Winnipeg following his periodic trip through Western Canada. He states that the smaller speculative builder is out of the field, and consequently small houses are very few. This is having a damaging effect on the demand for builders' hardware.

He states that Dominion and provincial work, such as court houses, police barracks, schools, etc., are more plentiful than they were last year. He gives Edmonton credit for being first in Western Canada for the number of business blocks being erected.

The Winnipeg Paint and Glass Co. find things good in the city for builders' hardware, as quite a number of small houses and blocks are being erected, which means more for the hardware man than if a number of large structures were being put up. This condition, however, is not so favorable to the dealer in plumbers' supplies, the business in houses being less than for large blocks. The above concern state that their business has shown an increase every month this year over last.

E. L. Sauder, manager of the Winnipeg Paint and Glass Co., has just returned from a trip to Swift Current, Edmonton, Calgary and Saskatoon, in which cities the firm has branches. He states that at Swift Current things are going ahead splendidly, the building including two schools and a court house. He found little building going on in Calgary, but noticed quite a lot of business in Edmonton in paints, glass and supplies.

Brisk Paint Business.

Paint firms have done a fairly good business during the last two months in paint. Owing to retailers not ordering in the spring, their sorting orders were better than usual. About 100 per cent. of the houses for which permits have been issued in Winnipeg are going up, but the same cannot be said of apartment and business blocks.

Two important lines added to Winnipeg quotations this week are plain wire, $2.90 base, and bale ties, 14 gauge, single loop, $3.65 Winnipeg, and $3.25 Fort William.

Furniture.

Furniture is an important factor in the hardware business, but only in the smaller towns and villages. Refrigerators and stoves are akin to furniture, and where there is an opportunity, the merchant goes in for the full line, making a furniture section in his store. It is surprising the lines into which country hardware merchants are branching. Hail insurance finds favor with many, while undertaking establishments are gradually becoming synonymous with hardware stores.

That the hardware dealer has little chance with furniture beyond refrigerators and stoves in the larger cities is shown by the action of Allaire and Bleau, old-established hardwaremen in St. Boniface, Man. While they have been making a profit of 40 to 50 per cent. on furniture, they have found it necessary to dispose of that end of the business, claiming their inability to compete with the large department and furniture stores of Winnipeg. Their hardware business is growing to such an extent they will require the space taken up by furniture for new stock.

AGGRESSIVE METHODS THAT CREATE SALES

(Continued from page 38.)

purposes. It is of simple construction and is not at all flashy in appearance, but it shows the goods off to advantage. It is made out of ordinary window glass that is always kept well polished inside and out, that is set in a frame of ash that I had turned out in a nice pattern at the planing mill. The total cost was just four dollars and it serves my purpose splendidly.

I am very enthusiastic about this line and the manner in which my sales are growing in it. It grows even faster than the number of autos in town does, owing to visiting cars dropping in here for needed repairs. There are seventeen cars in town now, and what with the natural increase that will occur every year, I am quite certain that my auto accessories will prove to be in time one of my most valuable lines.

NEW METHODS AND OLD GOODS.

Instead of cutting prices and demoralizing trade conditions and weakening the sales confidence of the staff, why not take the bull by the horns and make a leader of old goods. Try the sunlight of the window instead of the dust of the shelves. A new and effective combination of old goods will unload them as quickly and to infinitely greater satisfaction than a mark-down in price.

THE SOLILOQUY OF A SHIRKER.

(Continued from page 50.)

And how I sympathize with myself. I am always injured. My saving grace is my plausibility of speech. I am the living, vitalized embodiment of "excuse." It is nearly always: "I will do a thing" rather than "I have done it." If you do not know me very well, you will not see my lying laziness through the smiling and bland innocence of my frank face. I have mastered the very fine art of appearing busy. But even I know, only too well, that a man's brain must be in league with his moving hand, otherwise the better half of him is loafing.

What Shall the Shirker Do?

Shall I give my heart and my hopes and my ambitions and my vital energy to my firm? Shall I, at office or at home, in street or in bed, keep everlastingly at it in the matter of perfecting my own little strategic environment of business? Shall I look in the dark corners and unlikely places for ideas that shall advance, first, my firm and, then, indirectly, me? Shall I come home nights bright-eyed, buoyant of spirits, animated, happy, pleased with the progress of every unit, and rise with greater hopes and ambitions for a greater day? Shall I show in my very manner and my habits and my sunny optimism, that I like what I am paid to do? Shall I sing at my labor, as my desk-mate does, and make pleasant play of work because there is true affection in the doing? Shall I build for the brilliant future and, privileged to look at ledgers, congratulate the very gods that success and fair profits shall come to my firm? Shall I see each ruled page gay with promise and rich in effort? Shall I carry into my home and to my wife and children a reflection of a sublime peace and joy? Shall all the work know I have cuddled up to my job and liked and loved and encouraged it, and shall it be as much a part of me as my very thoughts, day and night?

Or shall I sit here, idly drumming my desk; cold, phlegmatic, unsympathetic, selfish; nagged by my little duties and dwarfed by the terror of the time-clock?

Shall I find my poor ambition only in dodging responsibility? Shall the rows of desks and the simple rooms and the machinery of trade stalk past in my dreams, as dreaded ghosts of the inevitable?

It is not truly I, thus bowed, a listless figure, o'er my task. It is the mere temporary shell of me, misdirected, sick, diseased, gone astray from the only thing in life worth while where noble men congregate—honest labor. Very soon I will sing as I work, as my neighbor does, and the song shall consecrate me. For when we like to do a thing, we do it as well as it is in us to do it.

A Composite's New Dresses for Old Ideas

A Live Wire's Adoption of Other's Ideas—Novel Ideas in Paint Selling—Practical Window Trims—New Sources of Sales Opened Up By Revision of Old Methods.

Hardware and Metal has, at considerable expense, obtained the inside histories of a large number of very successful summer paint campaigns that have been carried out during the past year by a representative group of hardwaremen scattered from Halifax to Vancouver. The very pick of the winning methods of the most successful of them are set forth in the following article as having been those of a mythical Dan McAvery, who is a composite characterization of them all.

DAN McAVERY faced that Summer with the record of the best spring sales of paints and accessories that he had ever experienced; but with it, the further knowledge of a dropping sales list.

Conditions had been far from good in business circles generally for some time past and the hardware trade had suffered with the other lines; but as a result of a nation-wide "Clean Up and Paint Up" campaign, the paint line had more than held its own, and in fact, had sold much better than other hardware lines.

"How to check the mysterious daily decrease in his sales and cause the difference to be of a positive rather than of a negative nature?"

Where to get new selling ideas? What was to be done to offset the present losses? Those were the questions.

As is quite often the case, his answer came quite by accident at a time, when, without quite having given up hope, he was nevertheless, blindly grouping about, so to speak, for some riddle to the enigma.

It was quite late at night but he had returned to the store after supper in the vague hope that the old familiar environment would assist his balky mind in its task. He was idly turning over the pages of an old issue of his favorite trade journal when his eye was caught by the picture of a snappy paint window that accompanied an article on paint selling. His chair came down with a whack as he settled over his desk, deep in the perusal of the article, and from that to other trade journal articles of ancient vintage.

The next day he proceeded with the initial steps of his trade-getting campaign.

He first began his private "Clean Up and Paint Up" campaign on his advertising literature. He ordered one thousand eight by twelve inch circulars of a high grade of paper. The leading feature of the circular was a nice half tone reproduction of his store interior with himself and clerks at their posts. Above the picture he placed his firm name and nothing else; underneath, in large print, the two italicasized words "Honest Service." Some time before, his enterprising trade weekly had supplied him with some cheap but serviceable electros of the principal items of his stock. He made a requisition on these and ran neat cuts of them, with a brief description and the price of each attached, under the store picture. These he distributed in the usual manner by mail, accompanying each with a personal letter, particularly so in the case of the farmers whom he could not depend upon seeing regularly.

In the weekly newspaper he ran a picture of the best window trim that he had ever had; over it again, his firm name, under it the words "We Sell With An Eye To Your Future Trade," and under that, cuts not previously shown in the circular.

He had used the cuts once before on the occasion of the sending out of his initial catalogue that spring at which time the innovation had greatly helped his sales. He felt that he need not seek to change the form of the catalogue so soon, but by showing the most impressive cuts of the most widely used articles, both in the circular and newspaper, he felt sure that he could renew the original interest in them.

His next step was to buy a small kodak, which transaction he accomplished by trading paint to the local photographer, who was the owner of some musty looking buildings. He was careful to get one that had a good lens and that was famous as an engineer's kodak owing to the exactness with which it produced the detail of its subjects.

By the time the paper was out the next week, he was able to run an entirely new feature. This consisted of the firm name again at the top; but instead of the picture of the store and cuts of paint cans and accessories, he ran a picture of a weather-beaten barn belonging to a near-by farmer, and labelled it "Then." Side by side with it was the scarcely recognizable picture of the now painted building, labelled "Now." Underneath the first was a facsmile copy of the owner's original order for the paint and under the second was one of a testimonial letter from the same individual, testifying to the benefits accruing to him as a result of the painting and speaking in glowing terms of the brand of paint that McAneny handled. He changed that ad. every week, showing pictures of other near-by barns, houses, boats, etc., that had been renovated by the use of his paint. In addition to this, whenever the weather reports indicated good weather ahead, he featured that fact strongly by quoting verbatim the essential facts of the latest report and under the quotation would run some original and catchy underlining that pointed out the value of painting while the good weather lasted. One such slogan that made a hit, ran thus, "Now is your chance to get even with the weather man." He sent out form letters dwelling upon the essential knowledge of facts that are necessary to the amateur painter, such as the thickness of coats, the number of them, the removal of old paint, etc., and emphasizing the economic value of a coat of paint. He also agreed to loan step-ladders for small painting jobs.

He centered his work strongly on his windows and made them very distinctive in the effort to make each display convey its own individual message. He sought simplicity of effect and carefully avoided overcrowding, for he found that a few cans of paint or other articles served as well as a hundred of them if some useful and practical point was demonstrated. For instance, he showed one section of a board fence of his own that had received a yearly coat of paint for five years. It was in first-class condition, straight and clean and the nails were still sound. On the other side of the window was a section of a fence of the same quality of lumber that had been built at the same time as his own. The boards were warped and weatherbeaten and in places had pulled loose from the connecting scantling. The nails were badly rusted and in many cases the heads had fallen off. They were placed before a background of wall board and cheese cloth and in front of them was the single word "Which" constructed out of cans of paint brushes, etc. Tacked to each piece of fence was a small placard that gave its history.

Another window consisted of a display an excellent piece of clap-board painting that was labelled "Quality:" opposite it was another piece of the same material that had been covered with an inferior paint; this was labeled "Cheapness." The first example brought out in strong relief the superior

(Continued on page 58.)

"CHALCO"

A PAINT AND VARNISH REMOVER THAT'S 20% MORE EFFICIENT THAN OTHERS YET COSTS NO MORE

To Retailers, Jobbers and Manufacturers:

We are now able to offer in "Chalco" a Paint and Varnish Remover of unusual merit.

It's 20% more efficient than others.

TRADE CHALCO MARK

The Paint and Varnish Remover

"We pay no royalties to put on your bill."

The Tramp of Many Feet

BERRY BROTHERS' CELEBRATED TRADE MARK BRILLIANT DURABLE UNEXCELLED VARNISHES

The Hoofs of the Hobby Horse

The Varnish You Sell Should Stand These Tests

Varnish that resists the hard wear and tear of constant use is the kind of varnish that makes satisfied customers. Liquid Granite and other Berry Brothers' Varnishes have given over half a century's satisfaction to users. Their rich tone and wonderful wear-resisting qualities have demonstrated their superiority in the most pretentious homes, the largest skyscrapers and the finest public buildings throughout the country.

Liquid Granite

On floors finished with Liquid Granite, children may play to their heart's content, heavy furniture may be moved from one room to the other, an army of feet may tramp every day without marring the tough, elastic surface. Liquid Granite floors are easily kept clean, scrubbing with soap and water does not affect them.

If you do not sell Berry Bros.' products, investigate our plan of co-operation with progressive dealers.

Weekly Market Report---Paints

MONTREAL.

MONTREAL, June 25.—Firm markets in turpentine, oils and white lead, are the feature of the paint markets at the present time. Business continues good and in some instances it is stated that the volume of sales are ahead of last year while in other cases it is said to be up to a year ago. Collections might be better than they are but there is not as much complaint on this score as there was awhile ago. Retailers, both in the city and country districts report business good and this is borne out by the orders being sent in to the jobbers.

Turpentine.

The market in turpentine has been fluctuating somewhat of late in the primary market but locally the market continues firm. Some of the jobbers are of the opinion that prices will go no higher; that they have about reached the limit. It is worth noting that the present quotation is ten cents higher than at this time last year. The price has been advanced one cent per gallon since last week and quotations now are:

1 barrel ..... 67 c per gal
5 barrels ..... 66c per gal.

Five-gallon packages, 5 cents advance; packages extra; terms net.

Linseed Oil.

For both raw and boiled oil the market is very very firm and there seems every indication that higher prices will soon be announced. Reports received here are that the acreage sown in flax this year is considerably below that of a year ago, and it is felt that under the circumstances prices will surely advance. Quotations remain as at last report:

Raw Linseed—
1 to 4 barrels ..... 61c per gal.
5 to 9 barrels ..... 60c per gal.
Boiled Linseed—
1 to 4 barrels ..... 64c per gal.
5 to 9 barrels ..... 63c per gal.

Resin.

Resin has advanced 15c in the finer grades. Water white is now selling at from 7.50 to 8.00 per 280-bbl. The inferior grades have dropped 15c. G is now selling at from 5.56 to 6.00. The better grade is very firm, whilst the other is rather weak.

White Lead.

A very firm market is reported on white lead. There has been an advance in dry lead, but local quotations are not yet affected. Prices quoted for white lead remain at $8.05 for ton lots and $8.25 for less than ton lots.

Gasoline and Benzine.

There has been a little falling off in the sales of gasoline and benzine during the past week or two, but business is still very good. Prices are the same as last report except for a half-cent reduction in the price of gasoline for tank wagon lots of 100 gallons. Quotations are:

Barrels, in wood .....21c gal.
In steel and drums .....18c gal.
Tank wagon (100 gals.) .....17c gal.

Benzine is quoted at 20c per gallon in single barrels.

TORONTO.

Toronto, June 25.—Paint lines are still in fair demand but have fallen off considerably in the past week. The showery weather of late in this vicinity may have helped to create this condition. There has been no changes. Turpentine is still quite stiff, and oil shows no signs of falling off. White lead shows activity but no direct raise as yet. Glass and paris green are probably the poorest selling lines.

Turpentine.

Ruling price in turpentine is still very firm at 70c, and that price is still shaded in some quarters. Ordinarily, this staple is low instead of on the advance at this season of the year, but the curtailment of production by the producing association has reversed the usual order of affairs. The convention at Savannah last fall took the matter of past over-production up and arranged for a better control of the market. The present high price is quite likely to hold throughout the summer with a strong probability of an advance. If a sudden demand should spring up a pinch in turpentine would likely result. The June stocks in Savannah of the past four years inclusive were as follows:—1911, 20,000 bbls.; 1912, 31,000; 1913, 26,000; 1914, 16,000. It can readily be seen by the above that stocks have been greatly reduced. The demand has fallen off with that of paint

Linseed Oil.

Oil is still firm at 63 and 66c. Flaxseed in Winnipeg is up to 1.37, and very firm at that. Demand has been less this past week. Authorative estimates of flax acreage now give a decrease of 17 per cent. in Canada, and 15 per cent. in the States. The weather has been very propitious for the crop to date.

The loss in acreage may be attributed to a smaller acreage of raw land broken this spring added to the fact that this spring has been favorable for the planting of wheat. No accurate reports are out on Argentine prospects but in any event, owing to the inferior quality of that country's flax seed, Canada and U.S. must depend largely upon their own crops to regulate prices.

Gasoline and Benzine.

These lines have followed gas and oil ranges in lessened demand the past week. Prices remain at where they dropped to last week, 20c a gallon for gasoline, and 19c for benzine.

White Lead, Paris Green, Etc.

White lead is unchanged in price as per current market quotations, but no booking at present prices is accepted for later than Aug. 1st. There has been an advance on dry white lead to the grinders, but the effect of same has not been felt locally as yet.

Paris green is still in poor demand at 11¼, 17½ and 19c per 100-lb. drum, according to quality desired. The cold weather appears to have held the bugs off the fruit this year. Arsenate of lead is still 9.75 per 100-lb. keg, and quiet at that.

A COMPOSITE'S NEW DRESSES FOR OLD IDEAS.

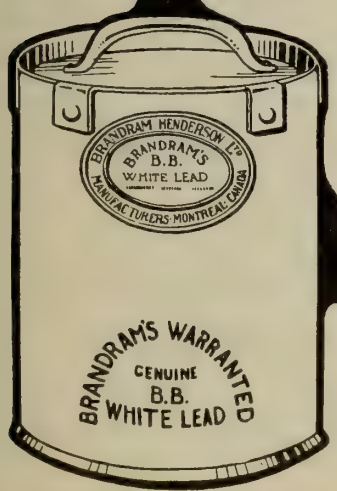
(Continued from page 56.)

advantages of the high priced paint, the other, the poor appearance of the ordinary cheap paint. Another window showed scraps of old iron, galvanized and otherwise that had once been painted, and illustrated the saving qualities of paint; this was labelled "The man who knew." The reverse side of the picture was shown by a similar heap of metals that had not been painted, and were as a consequence badly rusted and corroded. This heap was labeled: "Penny wise, pound foolish."

A very prolific source of new trade was found in the owners of idle buildings that needed paint. A few calls, and the right arguments usually convinced them that the chief cause of their idle condition was the fact that their appearance was unattractive to the prospective renter.

No single one of Dan's methods, however, would have brought the great success he experienced if it had not been used in conjunction with the others. But when all was said and done, the chief credit of that success was due his eternal vigilance in the constant personal supervision of the most minute details of his campaign, an unfailing enthusiasm which he injected into his little force as occasion demanded, and last, but not least, having the goods as advertised and of the quality promised.

WHEN GEORGE II WAS KING



Drop A Pebble Into A Pond

and the ripples spread out in ever-widening circles until the whole surface is covered. When George II was king, some 175 years ago, we dropped

BRANDRAM'S B.B. GENUINE WHITE LEAD

into the world, and the sales ripples have been spreading out ever since, until to-day, it may almost be said that Brandram's is sold wherever White Lead is known.

Why? Simply because from that day to this, Brandram's has been recognized as unequalled in **quality.**

Remember this, Sir: When you offer Brandram's B. B. Genuine, you offer a White Lead with 175 years of high reputation back of it —an asset you get for nothing; and you know what a big factor **reputation** is in sales development.

With Brandram's, you would have the logical basis for more sales and larger profits—absolute reliability and established reputation.

Write us for details.

Over half a century of Paint-Making Experience

is the record which backs up **Jamieson's Pure Prepared Paints**—a record which has not been built up by selling paints of an inferior quality.

Jamieson's Paints and **Varnishes** are known all over the country for their absolute purity.

R. C. Jamieson & Co., Limited

Montreal Established 1858 Vancouver

Owning and operating P. D. Dods & Co., Ltd.

"The purest treasure
Mortal times afford
Is **spotless reputation:**
That away,
Men are but gilded loam
Or painted clay."
—King Richard II.

Thomas Mowbray, Duke of Norfolk, certainly knew how to express in beautiful terms the value of

A SPOTLESS REPUTATION

Both Bolingbroke and Norfolk were excellent in argument and protestation of their loyalty to King Richard II. The tragedy at Pontefract Castle speaks for itself as to the reality of these protestations from Bolingbroke.

WE KNOW the value of a Spotless Reputation. We are the

LARGEST EXCLUSIVE METAL DEALERS IN CANADA.

YOU KNOW the business has been built on the sound foundation of quality.

WHAT WE MAKE WE GUARANTEE

and we are proud of our spotless reputation that extends from coast to coast. If you want quality in

BABBITT, SOLDER, LEAD PIPE and ALL PLUMBERS' SUPPLIES.

Send your orders to

When Wood Workers Ask for Screws

Be able to supply them with

PAT. FEB. 2, 1909

SEE THAT SQUARE HOLE

ROBERTSON'S SOCKET HEAD WOOD SCREWS

These screws are far superior to any other kind. They have a square hole into which our specially designed driver fits snugly. The driver cannot slip and thus spoil screw heads or material.

We also manufacture high-grade Yankee Bits, Brace Bits, Rivets, Burrs, Washers, Nails and Wire.

Drop a card for catalogue.

The Proper Paint Perspective

It's well to remember that the store that sells satisfactory paint, wall finishes, etc., gets almost as much credit as the maker. Bring back the customer **satisfied;** that's the proper paint perspective. He may not need paint so often, but when he does **you'll** get his order. Sell poor, unsatisfactory goods and the reverse is the case. You'll make **one** paint sale and lose a **permanent customer** for paint and other things. And now we want to tell you our lines of paints, wall finishes, etc., will bring him back. Ask us about them.

BENJAMIN MOORE & CO., LTD. **6 Lloyd St., West Toronto**

NEW YORK CHICAGO CLEVELAND CARTERET, N. J.

Do you sell it?

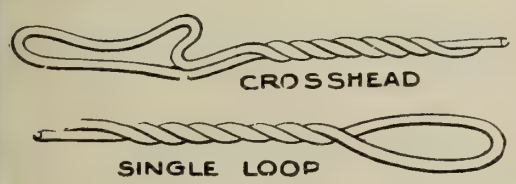
Stephens PURE PAINT

Structural Iron Paint

Successfully withstands for years the extremes of the weather and the expansion or contraction of iron.

Will not crack or pull off as it has just the right amount of elasticity.

It has efficient moisture-resisting qualities.



Why not be our agent? We pay big profits and guarantee satisfaction.

Write for our proposition NOW, lest you forget.

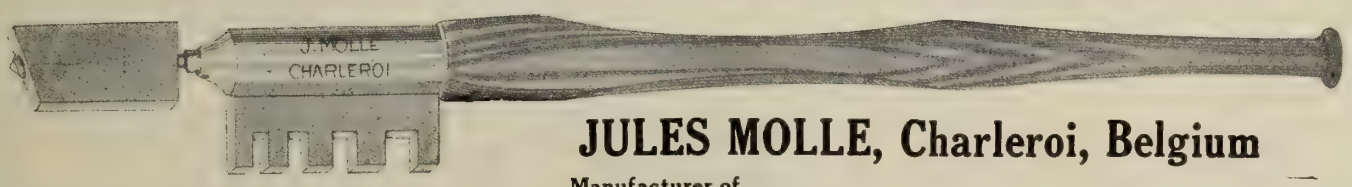
G. F. Stephens & Company, Limited

WINNIPEG, CANADA. **Branch at Calgary, Alta.**

WIRE BALE TIES

Our wire, for baling hay, is made from the finest quality Bessemer Rods, and is 10 per cent. stronger than any other baling wire.

This is the line that brings the dealer clean, satisfactory profits with every sale, as it is not the come-back kind.



Get our prices and send us a trial order—we guarantee to satisfy.

We also recommend our **WIRE NAILS** and **STAPLES** as inferior to none.

It pays to push Yale Padlocks

Your Yale Padlock business is limited only by your willingness to push it. Think of the many uses for Yale Padlocks and remember that every use means a sale. Your customers are learning that there are padlocks and padlocks: that "Yale" is a good padlock's first name and that this name identifies padlocks made by us. How can you better serve your trade and better serve yourself than by meeting every padlock call with a "Yale."

Send today for your copy of our interesting free book "Selling More Yale Padlocks." It will not only help you sell Yale Padlocks, but the ideas contained in this book will be of great help in building up your entire business.

Canadian Yale & Towne Limited

Makers of Yale Products in Canada:
Locks, Padlocks, Builders' Hardware and Door Closers

General Office and Works: St. Catharines, Ont.

WELL-CLEARED SHELVES

Begin to show up at this time of year in the paint department.

Have you been satisfied with the way in which yours were cleared? Did you have any kicks or did your customers come back for more? Were they cleared quickly? Did your sales clerks spend useless time in forcing sales? Was your paint of such a grade that it increased or decreased your cost of doing business?

FILL THEM UP AGAIN WITH

Maple Leaf Paints and Varnishes

and you will clear them just as quick or quicker without complaints or worry and with larger profits.

This Fall

is just as good a time to take on our MAPLE LEAF PROPOSITION as any.

The Fall Painting Idea

is becoming more widespread, and is bringing paint departments that prepare adequately for it into greater prominence each year.

There is no better line of paints and varnishes than the M. L. with which to develop Fall paint business.

The Aging process is the step in varnish making which largely determines the profit it is possible to make from your varnish sales.

The thinning room where the temperature of the varnish is reduced before adding the thinner.

These powerful filters remove all sediment and undissolved gum. The varnish is forced through 64 thicknesses of filter cloth and 252 sheets of filter paper.

Immense storage tanks where S-W Varnishes are thoroughly aged before being put in the cans. An idea of the size of these tanks may be gained by comparing with the man at the railing.

Aging is as necessary to develop the "De Luxe" qualities in varnish as it is wine.

Few manufacturers of varnish can spare the capital required to age varnish thoroughly. The capacity of Sherwin-Williams varnish storage tanks is around a million gallons. Figure the amount of money tied up the year round in aging several hundred thousand gallons. It is the facilities and capital of The Sherwin-Williams Co. that enable them to maintain in their full line of varnishes superior quality and uniformity—the result of thorough aging.

Sherwin-Williams varnishes are made from the right materials under the supervision of expert varnish makers—they are thoroughly aged until they have the special qualities they are intended to have, and that is why they give the utmost satisfaction and have the confidence of varnish users—on satisfaction depends the profits from your varnish sales.

THE SHERWIN-WILLIAMS CO.
